SECTION 1 – GENERAL INFORMATION

1.0 INTRODUCTION

In this document "we", "us", "our" and "ours" refers to Endeavour Energy; "you", "your" and "yours" refers to you, the customer.

Words in *italics* are explained in the Standard Form Customer Connection Contract. The contract is available for download from our website at

www.endeavourenergy.com.au

Alternatively, you can obtain a copy by calling our Customer Service staff on 131 081.

2.0 RATES, FEES AND CHARGES

The documents mentioned below can be found on our website. If you have any questions in relation to the application of network prices please address correspondence to:

Network Pricing
Endeavour Energy
PO Box 6366
Blacktown NSW 2148
network.pricing@endeavourenergy.com.au

2.1 Network Price List

We have compiled this Network Price List (**Price List**) to provide you with:

- a) a description of rates relating to our provision of *connection services* and *network use of system services*;
- b) the basis for calculation of rates for *connection services* and *network use of system services*; and
- c) information relating to miscellaneous fees and charges (Section 4),

when your *property* is connected to our *distribution system*.

This Price List forms part of the Connection Contract and complies with:

- the Australian Energy Regulator (AER) New South Wales Distribution Determination 2009-10 to 2013-14;
- the National Electricity Rules; and
- the *Electricity Supply Act*

For the purposes of this Price List the following public holidays are deemed to be non- *business days*: New Year's Day, Australia Day, Good Friday, Easter Monday, Anzac Day, Queen's Birthday, Labour Day, Christmas Day, Boxing Day, and other gazetted public holidays in New South Wales.

All other non-gazetted holidays, such as bank holidays and other local holidays, are deemed to be *business days*.

The NSW Government maintains a public holiday listing at:

<http://www.industrialrelations.nsw.gov.au>

Endeavour Energy reserves the right to declare (or decline) additional holidays, for the purpose of charging for *network use of system services*.

2.2 Pricing Proposal

In accordance with clause 6.18.2 of the National Electricity Rules, Endeavour Energy is required to submit a **Pricing Proposal** to the AER which sets out the proposed prices required to fund the capital and operating investment programs approved by the AER in the 2009 Distribution Determination to ensure a safe and reliable network over the 2009 regulatory control period.

Endeavour Energy's 2012/13 Pricing Proposal was approved by the AER on 1 June 2012.

Endeavour Energy's approved 2012/13 Network Pricing Proposal is available at:

<http://www.endeavourenergy.com.au>

This Price List has been prepared in accordance with the AER approved prices.

3.0 DEFINITIONS

3.1 Meaning of Words

In this Price List, unless inconsistent with the context or subject matter:

"Accredited Service Provider" (ASP) means a person accredited for the provision of (contestable) services, in accordance with the *Electricity Supply (General) Regulation 2001*.

"Accumulation Meter" has the meaning given in the NEM Metrology Procedures published by AEMO (see web link under "Metrology Procedures" below).

"AEMO" means the Australian Energy Market Operator.

"AER" means the Australian Energy Regulator.

"Chief Engineer" means the Chief Engineer of Endeavour Energy, or a person authorised by the Chief Executive Officer or the Endeavour Energy Board of Directors to act on that person's behalf.

"Chargeable Demand" has the meaning given in clause 7.2.

"Connection Contract" means the *standard form customer connection contract* entered into between a customer and Endeavour Energy.

"Controlled Load" has the meaning given in clause 4.3.

"Daily Threshold" has the meaning given in clause 8.2.

"Demand Charge" has the meaning given in clause 7.

"Distribution Loss Factor" has the meaning given in clause 9.

"DST" means Eastern Daylight Saving Time and applies for the period gazetted by the NSW Government for use as local time, according to the *Standard Time Act 1987*.

"EST" means Eastern Standard Time and applies for the period gazetted by the NSW Government for use as local time, according to the *Standard Time Act 1987*.

"Export Energy" has the meaning given in clause 13.

"Feed-In Tariff" has the meaning given in clause 5.9.

"Import Energy" has the meaning given in clause 13.

"IPART" means the Independent Pricing and Regulatory Tribunal of New South Wales.

"Inclining Block Tariff" has the meaning given in clauses 4.2 and 4.5.

"Interval Meter" has the meaning given in the NEM Metrology Procedures published by AEMO (see web link under "Metrology Procedures" below).

"Interval Meter Data" has the meaning given in the National Metering Identifier (NMI) Procedure 0610-0008 published by AEMO.
(<http://www.aemo.com.au/electricityops/0610-0008.pdf>)

"Metrology Procedures" means the NEM Metrology Procedures as published by AEMO.

"Metering Provider" has the meaning given in the National Electricity Rules.

"MOR" means one of the Market Operations Rule(s) No.1 to 5 of 2001.

"MSATS" means the Market Settlement and Transfers Solution operated by AEMO.

" Pricing Proposal" has the meaning given in clause 2.2.

"NEM" means the National Electricity Market.

"NMI" means the National Metering Identifier assigned to a *supply point* according to AEMO procedure 0610-0008, see also clause 14.

"Normal Business Hours" has the meaning given in clause 16.1.

"Notification of Service Works" (NOSW) has the meaning given in the Endeavour Energy (former Integral Energy) Network Management Plan 2009-2014, Chapter 2 Clause 6 (see Appendix 4).

"Price List" has the meaning given in clause 2.1.

"Pricing Options" are set out in clause 4 of this Price List, only one of which will apply at any time to the *connection services* and *network use of system services* provided at each separately metered *supply point*.

"Season" has the meaning given in clause 4.7.

"SFCCC" means the Endeavour Energy Standard Form Customer Connection Contract.

"Solar Bonus Scheme" has the meaning given in the *Electricity Supply Amendment (Solar Bonus Scheme) Act 2009*.

"Time of Day" has the meaning given in clauses 12.1 and 12.2.

"Transmission Node Identifier" has the meaning given in clause 9.

"Voltage of Supply" has the meaning given in clause 15.

SECTION 2 – NETWORK PRICES

4.0 PRICING OPTIONS – DETERMINATION

4.1 Determination of Pricing Options

We assign you a **Pricing Option** from those described in clause 4 and 5 below, and set out in Appendix 1 and 2, when we commence supply to you under a Connection Contract with us. The assigned Pricing Option will depend on the annual energy consumption measured at the *supply point*, the supply voltage at the *supply point*, the method of connection to our *distribution system* and the type of meter(s) installed at your *property*.

The available Pricing Options are

- Domestic;
- Controlled Load;
- Domestic Time of Use;
- General Supply Non Time of Use;
- General Supply Time of Use, and;
- Demand Time of Use (Low Voltage, High Voltage and Sub-transmission).

If you wish us to change the Pricing Option applicable to a particular point, which is separately metered at the *property*, then you must contact your *retail supplier*, who in turn has to apply to us in writing, giving us 30 days notice. Any change we decide to make to the Pricing Option will take effect from the date on which your meter is next read after we process your application. We reserve the right to review your Pricing Option in the event of load change or of any other reason provided we do so acting reasonably (see also Appendix 1 and 4). If we change your Pricing Option we will notify your *retail supplier*. The decision of the Chief Engineer shall be final and conclusive in determining the applicable Pricing Option.

If we agree to your request to change a Pricing Option to or from a **Controlled Load** Pricing Option more than once within a 12 month period, we may charge you or your *retail supplier* the Controlled Load conversion fee (listed as item 7 of the table in clause 16.1) for each additional change.

The amount that you or your *retail supplier* must pay us, is calculated by multiplying the appropriate GST-inclusive "per kWh" and, where applicable, "per kVA" price by the amount of electricity consumed (based on our measurement or estimate of your consumption) at each separately metered *supply point*.

In addition, you must pay the relevant GST-inclusive "per day" **Network Access Charge** (see clause 6, if any) for each day from the *actual start date* until your Connection Contract with us terminates.

4.2 Domestic

A **Domestic** Pricing Option only applies to connection services and network use-of-system services supplied to the supply point, which is predominantly used for one or more of the following purposes:

- a) private dwellings;
- b) boarding and lodging houses, being any house in which three or more persons exclusive of the family of the proprietor thereof are lodged for hire or reward from week to week or for more than a week;
- c) retirement villages;
- d) residential sections of nursing homes and hospitals;
- e) residential sections of nursing homes and hospitals;
- f) children's homes;
- g) approved baby health centres, day nurseries and kindergartens
- h) churches, mosques, temples etc., being buildings or properties which are used principally for public worship or partly for public worship and partly for educational purpose; or
- i) approved caravan sites,

and where that point has an accumulation (basic or disc - type 6) meter or an interval meter that is read as an accumulation meter.

The Domestic Pricing Option, an **Inclining Block Tariff (IBT)**, comprises the following components, as detailed in Appendix 1:

- a Network Access Charge (fixed component), and
- two variable components consisting of:
 - 1) a **First Block Rate**, expressed on a ¢/kWh basis, to be applied to electricity consumption (kWh) up to and including 1,750 kWh per quarter; and
 - 2) a **Second Block Rate**, expressed on a ¢/kWh basis, to be applied to electricity consumption (kWh) above 1,750 kWh per quarter of Use;

We reserve the right to assign a Domestic Pricing Option to any new *supply point* used for the purposes (a) to (i) and fitted with accumulation meter.

4.3 Controlled Load

A **Controlled Load** Pricing Option only applies where electricity load is separately metered and controlled at a *supply point* with an accumulation meter.

- a) **Controlled Load 1** applies where specified appliances are controlled by our equipment so that supply may not be available between 7:00am and 10:00pm, during Eastern Standard Time (EST) and during Daylight Saving Time (DST); and
- b) **Controlled Load 2** applies where our equipment controls approved specified appliances so that electricity is available for restricted periods not exceeding a total of 17 hours in any period of 24 hours.

Switching times will be managed to minimise network investment and meet customer needs for the load being controlled.

When a customer with Controlled Load chooses another Pricing Option, the Controlled Load meter may be removed but the Controlled Load relay must remain in place. The Controlled Load relay will remain our property, and must not be removed without the written approval of the Chief Engineer.

Customers with a Controlled Load relay are entitled to a controlled load network price only if all of the following conditions are met:

- a) Controlled Load consumption is separately metered using the same type of meter as the uncontrolled portion of a customer's load;
- b) Controlled Load consumption and uncontrolled load consumption is always synchronously read, i.e. on the same day; and
- c) the Controlled Load is operated by our load control systems or time switches.

This Pricing Option is applicable only to approved appliances as detailed in Appendix 2.

4.4 Domestic Time of Use

A **Domestic Time of Use** (Domestic ToU) Pricing Option applies to a property, which is predominantly used for one or more of the purposes set out in clause 4.2 at a *supply point* with a time of use meter from which interval meter data is obtained. See also clause 5.5.

Domestic customers fitted with a meter capable of supporting a Domestic ToU Pricing Option (type 4, 5 or 6) may elect to take supply on this basis.

4.5 General Supply Non Time of Use

A **General Supply Non-Time of Use** (General Supply Non-ToU) Pricing Option applies to low voltage electricity used for any purpose other than Domestic, at a *supply point* with an accumulation meter or an interval meter that is read as an accumulation meter. See also clause 5.5.

The General Supply Non-ToU Pricing Option, an **Inclining Block Tariff (IBT)**, comprises the following components, as detailed in Appendix 1:

- a Network Access Charge (fixed component), and
- two variable components consisting of
 - 1) a **First Block Rate**, expressed on a ¢/kWh basis, to be applied to electricity consumption (kWh) up to and including 2,500 kWh per quarter; and
 - 2) a **Second Block Rate**, expressed on a ¢/kWh basis, to be applied to electricity consumption (kWh) above 2,500 kWh per quarter.

We reserve the right to assign the General Supply Non-ToU Pricing Option to any new supply point fitted with accumulation meter, with exceptions being made for those indicated in clause 4.2.

4.6 General Supply Time of Use

A **General Supply Time of Use** (General Supply ToU) Pricing Option applies to low voltage electricity used for any purpose other than Domestic at a *supply point* with a time of use meter from which interval meter data is obtained.

We reserve the right to assign the General Supply ToU Pricing Option to any new or existing *supply point* fitted with a interval meter.

4.7 (Seasonal) Demand Time of Use

A **Demand ToU** Pricing Option applies to electricity used for any purpose that includes a Demand Charge at each *supply point*. Customers shall formally notify Endeavour Energy when there is an anticipated change in demand at their site, for example where plant or apparatus is being commissioned or undergoing testing, or where load is transferred or rearranged.

A Demand ToU Pricing Option applies to electricity used for any purpose at a *supply point* with a time of use meter, from which interval meter data is obtained, and where

- total electricity consumption, per financial year, equals or exceeds 160,000 kWh, or
- electricity is supplied at a voltage level defined as either High Voltage or Sub-transmission, according to clause 15

We reserve the right to assign a Demand ToU Pricing Option to any new or existing *supply point* fitted with interval meter, where any of the criteria mentioned above applies.

We understand it is the responsibility of the *retail supplier* to monitor consumption at a given *supply point*, and to apply to Endeavour Energy Network in a timely manner, regarding any change in Pricing Option, according to both clause 4.1 and Appendix 4.

A Demand ToU Pricing Option, as applied by Endeavour Energy, will incur a Chargeable Demand based on Peak time periods, as set out in clause 7.

A Demand ToU Pricing Option, as applied by Endeavour Energy, will vary according to the month of the year in which the electricity is supplied (**Season**), with the distinct Seasons for the purpose of charging demand specified in clause 12.4.

4.8 Transitional

A **Transitional** Pricing Option applies to electricity used for any purpose, where Endeavour Energy decides to either:

- assign a different Standard Pricing Option to an existing supply point already on a Standard or Combination Pricing Option according to clause 5.2 or 5.3, or
- assign a Standard Pricing Option to an existing supply point currently on a Site-specific Pricing Option according to clause 5.6,

and where, as a result of such a decision, the projected increase in overall charges for that *supply point* is deemed to be unreasonable by Endeavour Energy.

We reserve the right to assign a Transitional Pricing Option to any new or existing *supply point* at the beginning of a new financial year, and to discontinue that same Transitional Pricing Option at the end of the same financial year, in which case every *supply point* affected reverts to the applicable Standard Pricing Option the next day.

The Transitional Time of Use tariff is not available by customer request.

5.0 PRICING OPTIONS – TYPES

5.1 Types of Pricing Options

Pricing Options are categories of prices, including all combinations of Pricing Options (**Combination Pricing Options**), which are available to customers depending on the type of meter that is installed at a *supply point* on the customer's *property*. The Pricing Options are described in clause 4 and 5 and set out in Appendix 1 and 2.

These Pricing Options apply irrespective of the customer's *supply contract* with their electricity retailer.

5.2 Standard Network Pricing Options

Standard Network Pricing Options (as set out in Table 1 of Appendix 1) are applicable to *supply points* located in the *Endeavour Energy distribution district*, unless one of the Pricing Options described in clauses 5.3, 5.4, 5.5 or 5.6 apply.

5.3 Combination Pricing Options

Combination Pricing Options (as set out in Table 4 of Appendix 1) are combinations of Pricing Options, which are applicable to *supply points* where a combination meter is installed. A combination meter is one which can meter both a controlled load and normal domestic (or general supply) consumption as two distinct energy flows. Combination Pricing Options are formulated based on the prices, which would ordinarily be applicable to each component of the Combination Pricing Option.

For example, NC01 (Domestic/Controlled Load 1) Pricing Option consists of Domestic and Controlled Load 1 charges. Sites with Type 5 meter will be assigned different network Pricing Options (see clause 5.5).

5.4 Unmetered Supply Pricing Options

Unmetered Supply Pricing Options (as set out in Table 5 of Appendix 1) are applicable to *supply points* that are not metered. Energy consumption is calculated using the appropriate algorithm in the applicable Metrology Procedure.

5.5 Type 5 Pricing Options

Type 5 Pricing Options (as set out in Table 1 of Appendix 1) are applicable to *supply points* with a Type 5 (manually read interval) meter installed. For Domestic customers who choose to be subject to a ToU tariff, the appropriate Pricing Option is

N705 Domestic ToU. For all other Low Voltage customers with a Type 5 meter installed, the N845 General Supply ToU Pricing Option is the appropriate equivalent.

5.6 Site-specific Pricing Options

We may assign a Site-specific Pricing Option to any *supply point* in circumstances such as, but not limited to:

- we wish to recover investment associated with stranded or dedicated assets, or other cost caused to us by the customer at that supply point, which may otherwise not be recovered under a Standard Network Pricing Option,
- we agree to assign a Site-specific Pricing Option following an application from the retail supplier acting on behalf of the customer, to be assigned a Site-specific Network Pricing Option.

Applications requesting a change to a Site-specific Network Pricing Option must be submitted at least six months in advance, and the *supply point* in question must be at High Voltage or Sub-transmission level according to clause 15, and satisfy at least one of the following criteria:

- Electricity consumption must have been equal to or greater than 100 GWh in total for the 36 months preceding the application; or
- Electricity consumption must have been equal to or greater than 40 GWh per annum in each of the two financial years preceding the application; or
- Monthly peak demand must have been equal to or greater than 10 MVA for 24 of the 36 months preceding the application.

If the application is accepted, a Site-specific Pricing Option will be applied to the *supply point* in question from the beginning of the financial year following the date of approval of the application.

We reserve the right to reassign a Standard Pricing Option to a *supply point* as set out in clause 5.2, and effective from the beginning of the next *billing period*, if we find that the *supply point* no longer satisfies any of the aforementioned criteria.

5.7 Embedded Generators

Any *supply point* that connects a generator to our *distribution system* must have an active *network use-of-system services* account associated with it, as we will invoice a Network Access Charge as set out in clause 6, irrespective of whether or not an Import of Energy, as set out in clause 13, occurs at such *supply point* during any *billing period*.

In cases where a High Voltage or Sub-transmission *supply point* exists primarily to connect a generator to our *distribution system*, and if energy consumed at that same *supply point* is less than five per cent of the energy generated during any *billing period*, then we may apply a General Supply Time Of Use Network Pricing Option, as set out in clause 4.6, to that *supply point*.

However, if the *supply point* in question exceeds the level given above, for more than two months during any period of twelve months, we reserve the right to assign a

Standard High Voltage or Sub-transmission Demand Time Of Use Network Pricing Option to it, effective from the beginning of the next *billing period*.

5.8 Small Non-market Generation Pricing Options

We have developed Pricing Options (**Small Non-market Generation Network Pricing Options**) for non-market micro-generation installations being added to *supply points* within our *distribution system*.

We reserve the right to assign (or not to assign) any such *supply point* to a Small Non-market Generation Network Pricing Option, listed in Appendix 1, Table 2.

5.9 Solar Bonus Scheme

The NSW Government's **Solar Bonus Scheme** credits participating customers with a feed in tariff for all the electricity that their eligible solar photovoltaic (PV) system or wind turbine generates and provides to the network.

On 27 October 2010, the NSW Government announced changes to the Solar Bonus Scheme. Under the revised Scheme to be eligible for the 60 cents per kilowatt hour (c/kWh) feed in tariff, you must have purchased or leased your system (or entered into a binding agreement to do so) on or before 27 October 2010, and submitted an application to connect your system to the grid with Endeavour Energy on or before 18 November 2010.

If you have purchased or leased your system (or entered into a binding agreement to do so) after 27 October 2010 or have submitted your application to connect your system to the grid with Endeavour Energy after 18 November 2010, you are ineligible for the 60 cents per kilowatt hour (c/kWh) feed in tariff, but you may still be eligible to participate in the NSW Solar Bonus Scheme at the new feed in tariff rate of 20 cents per kilowatt hour (c/kWh).

The NSW Government announced on 13 May 2011 that the Solar Bonus Scheme would be closed to new applications received after 28 April 2011 and that applications received before 29 April 2011, but not yet connected to the Scheme, will be considered eligible.

Further changes may affect the Solar Bonus Scheme Network Pricing Options as listed in Appendix 1, Tables 3a, 3b and 3c.

This Price List will be amended and re-published if any changes occur. Please contact us on 131 081 for further details or visit the NSW Department of Trade and Investment website at <http://www.trade.nsw.gov.au/> for more information on the Solar Bonus Scheme.

6.0 NETWORK ACCESS CHARGES

A Network Access Charge (**NAC**) is applicable to all customers. The NAC is applied as a fixed daily charge for each *supply point* to the Endeavour Energy *distribution system*, i.e. per National Metering Identifier (NMI). More than one NAC may apply per NMI if there is more than one Pricing Option applicable to that NMI.

7.0 DEMAND CHARGES

7.1 Demand metering

A Demand Charge is applicable to all customers on a Demand Pricing Option in respect of the demand for electricity their supply points place on the distribution system.

Demand is treated as a component of the Data Stream of Interval Metering Data, in accordance with Section 7 of AEMO procedure 0610-0008. For the purpose of this Price List, the following definitions are considered equivalent:

AEMO			Endeavour Energy	
Energy Flow Definition	NMI Master Channel Suffix	Quadrants covered	Energy (or Power) Flow Definition	Corresponding Load or Phase Angle ϕ in degrees
Import kWh	B	2, 3	Effective, generated	180°
Export kWh	E	1, 4	Effective, consumed	0°
Import kVARh	K	3, 4	Reactive, generated	Leading (Capacitive)
Export kVARh	Q	1, 2	Reactive, consumed	Lagging (Inductive)

For a particular NMI, the Demand Charge for a month is based on the demand (kVA) calculated for every metering interval during that month.

Let NEEEXXXXXX be a NMI with i feeders.
 Let $E_1, \dots, E_i$ be the kWh channels for each feeder.
 Let $K_1, \dots, K_i$ be the leading kVARh channels for each feeder.
 Let $Q_1, \dots, Q_i$ be the lagging kVARh channels for each feeder.

Then the kVA for each interval (usually half an hour) is calculated as

$$kVA = m \times \sqrt{(\sum E_n)^2 + (\sum (Q_n - K_n))^2}$$

Where m is the number of metering intervals in an hour (usually $m = 2$ within the NEM)

For *supply points* fitted with an 'EMAIL Q3' meter, the measurement of reactive energy is predefined in the configuration of that particular meter as the addition of lagging and leading components. Common practice is to identify this measurement as Q , in these instances the kVA for each half-hour interval is calculated as.

$$kVA = m \times \sqrt{(\sum E_n)^2 + (\sum Q_n)^2}$$

The resultant kVA for sites metered with an 'EMAIL Q3' meter is in real terms equivalent to

$$kVA = m \times \sqrt{(\sum E_n)^2 + (\sum (Q_n + K_n))^2}$$

For *supply points* covered by the Connection Contract, the difference in the above computations is not significant, as either Q or K (usually K) is nil. See clause 12 and 13 for further details.

7.2 Demand Charge calculation

If you are on a Demand ToU Pricing Option, your billing period is a calendar month, and you must pay a monthly charge (**Demand Charge**), based on the highest demand (kVA) calculated as in clause 7.1, which occurred within any half hour interval of that month falling into a time period defined as 'Peak' according to clause 12.2 (**Chargeable Demand**).

The demand charge is calculated as follows:

$$D_c = D_M \times d$$

Where

D_c = Demand Charge for the month

D_M = Chargeable Demand (kVA) recorded in respect of the supply point.

d = Demand rate (\$/kVA/month) according to the season.

The demand rates used to calculate this charge are set out in Appendix 1.

7.3 Demand pro-ration rules

If you change your retail supplier part way through the month, we will calculate the Demand Charge (based on your Chargeable Demand) for the entire month for the supply point and then pro-rate the charge to each retail supplier accordingly.

The pro-rated Demand Charge in respect of each retail supplier for each month is calculated as follows:

$$D_P = D_M \times d \times (t/T)$$

Where

D_P = pro-rated Demand Charge in respect of the retail supplier for the month

D_M = Chargeable Demand (kVA) recorded in respect of the supply point.

T = number of days in the entire month

t = number of days with the relevant retail supplier to be charged

d = Demand rate (\$/kVA/month)

For example, assume the customer C transfers from retail supplier 1 (R1) to retail supplier 2 (R2) on the 1st of January. The Chargeable Demand for the entire month

of January is 310 kVA, and the applicable Pricing Option's demand rate is \$7.00/kVA/month.

R1 would be charged according to the following formula:

$$310 \text{ kVA} \times 7.00 \text{ \$/kVA} \times (1/31) = \$70.00$$

R2 would be charged according to the following formula:

$$310 \text{ kVA} \times 7.00 \text{ \$/kVA} \times (30/31) = \$2,100.00$$

8.0 NETWORK ACCESS CHARGE AND CONSUMPTION PRO-RATION RULES

8.1 General consumption pro-ratio rules

Where Endeavour Energy is allowed by the AER to vary certain charges and rates, those variations may become effective part way through a *billing period*. The amount which each customer must pay for consumption under existing charges and rates, and for consumption under new charges and rates is calculated on a pro rata basis.

The pro-rated amount, in respect of the applicable **Network Access Charge** (NAC) and Energy Rate for each part of the *billing period* (respectively, after the increase becomes effective) is calculated as follows:

$$E_p = E_m \times e \times (t/T) + n \times t$$

Where

E_p = pro-rated sum of NAC and Energy Rate in respect to the *billing period*

E_m = the total consumption (measured in kWh) recorded in respect of the *supply point* for the *billing period*

T = number of days in the *billing period*

t = number of days with the relevant NAC and Energy Rate to be invoiced

e = Energy rate (¢/kWh)

n = NAC (\$/day)

For example, assume the customer has a quarterly *billing period*, and an increase in the Energy Rate is effective on the 31st of a 92 day *billing period*. The customer's energy consumption for the entire *billing period* was 920 kWh. Assuming the relevant Pricing Option's NAC is 0.25 \$/day before and 0.30 \$/day after the increase, and the energy rate is 7.00 ¢/kWh before and 8.00 ¢/kWh after the increase.

For the first 30 days, the customer would be charged according to the following formula:

$$920 \text{ kWh} \times 7.00 \text{ ¢/kWh} \times (30/92) + 0.25 \text{ \$/day} \times 30 = \$28.50$$

For the last 62 days, the customer would be charged according to the following formula:

$$920 \text{ kWh} \times 8.00 \text{ ¢/kWh} \times (62/92) + 0.30 \text{ \$/day} \times 62 = \$68.20$$

8.2 Specific consumption pro-rata rules in relation to IBT

For billing purposes, the consumption threshold under the IBT structure discussed in clauses 4.2 and 4.5 is converted to a daily basis (**Daily Threshold**).

If average daily consumption in the *billing period* is below the Daily Threshold:

$$E_c = E_A \times T \times P_1$$

If average daily consumption in the *billing period* is above the Daily Threshold:

$$E_c = [L_1 \times T \times P_1 + (E_A - L_1) \times T \times P_2]$$

Where

E_c = consumption charge in respect to the *billing period*

E_A = average daily consumption for the *billing period* (kWh)

L_1 = Daily Threshold for the First Block (kWh)

T = number of days in the *billing period*

P_1 = Energy rate for the First Block (¢/kWh)

P_2 = Energy rate for the Second Block (¢/kWh)

For example, assume a General Supply non-ToU customer consumed 5,400 kWh during a *billing period* of 90 days, giving an average 60 kWh per day. The energy rate is 6.50 ¢/kWh for the First and 7.00 ¢/kWh for the Second Block, and the annual IBT threshold is 10,000 kWh, the Daily Threshold is 27.3973 kWh per day, based on a standard year of 365 days.

The consumption charge is then calculated as follows:

$$27.3973 \text{ kWh} \times 90 \times 6.50 \text{ ¢/kWh} + (60.0 - 27.3973) \text{ kWh} \times 90 \times 7.00 \text{ ¢/kWh} = \$365.67$$

9.0 DISTRIBUTION LOSS FACTOR

The **Distribution Loss Factor** (DLF) is used by a *retail supplier* to increase the customer's metered energy amount to account for electrical losses in the *distribution system*.

The DLF codes and values applicable within the Endeavour Energy *distribution system* are published by The Australian Energy Market Operator (AEMO) on their web site. Further information is provided in Appendix 3.

Please note that any published DLF does not include the transmission losses, which are factored into **Transmission Node Identifiers** (TNI) and used in the market settlement of energy, to take account of any electrical losses in the transmission network.

TNI are published on the AEMO web site separately.

10.0 NEW SOUTH WALES CLIMATE CHANGE FUND

Endeavour Energy is required to contribute to the NSW Government's **Climate Change Fund (CCF)**.

Endeavour Energy is required to recover the CCF contribution through its charges for *network use of system services* with no more than 25 per cent of the contribution to be recovered from residential customers.

Off-peak: All other times.

12.3 Network Billing and Daylight Saving Time

This means that at the start of DST (2am on Sunday) there will be an hour of null data when the time is shifted forwards an hour from EST to DST. Also, data for the period 23:00 to 24:00 in EST will be recorded the following day for the period 00:00 to 01:00 DST.

The table below represents how the data is shifted for DST. The value in each cell (1 to 24) is the period of the day in EST.

	00:00 - 01:00	01:00 - 02:00	02:00 - 03:00	03:00 - 04:00	(etc)	20:00 - 21:00	21:00 - 22:00	22:00 - 23:00	23:00 - 24:00
EST	1	2	3	4	(etc)	21	22	23	24
DST day 1	1	2	NULL	3	(etc)	20	21	22	23
DST	24	1	2	3	(etc)	20	21	22	23
EST day 1	24	1	23	4	(etc)	21	22	23	24

The second row represents day one of DST. Note that the first two hours of the day are the same as EST. At 2am, when DST begins, the data is shifted forward one hour, resulting in a null value for the period between 2 and 3am. Following that, all data is shifted forward one hour as compared to EST.

The final row of the table represents the day when DST switches back to EST. The first three hours are as per normal DST days, then at 3am EST begins, which means there is a time shift back one hour. Thus data is recorded for 2 - 3am DST and also for 2 - 3am EST. This data is aggregated for the purpose of billing the energy (per kWh) component of the network charge, but not for the Demand charge component. After 3am, data is recorded and billed as per normal for EST.

Note that while there is less total consumption during the first day of the DST period, this is made up for when the switch back to EST occurs.

12.4 Season Definitions for all Demand ToU Network Pricing Options

The following definition of three distinct Seasons applies to all Demand ToU Pricing Options, for the purpose of charging demand each month, namely

Summer (S)

01 November, 00.00h to 31 March, 24.00h

Winter (W)

01 June, 00.00h to 31 August, 24.00h

Other Months (O)

01 September, 00.00h to 31 October, 24.00h
01 April, 00.00h to 31 May, 24.00h

	Month	July	August	September	October	November	December	January	February	March	April	May	June
Summer (S)						S	S	S	S	S			
Other (O)				O	O						O	O	
Winter (W)		W	W										W

12.5 Capacity Charges

Endeavour Energy does not charge for capacity provided, as part of our network use of system services charges.

13.0 TREATMENT OF IMPORT/EXPORT POWER FLOWS WITHIN THE CONTEXT OF OUR NETWORK USE OF SYSTEM SERVICES CHARGES

In the situation where an end-use customer generates into, as well as consumes energy from, Endeavour Energy's *distribution system*, *network use of system services* charges apply to the energy consumed by the customer (**Export Energy**). The energy generated back into Endeavour Energy's *distribution system* (**Import Energy**) is not recognised for *network use of system services* purposes, unless it is covered under a specific agreement.

Network use of system services charges are based on Export Energy only, i.e. Import Energy will not be subtracted from the Export Energy.

This policy also extends to Demand Charges, i.e. **Import Demand** will not be subtracted from **Export Demand** when calculating *network use of system services* charges.

Furthermore, metering shall be configured so that reactive energy is measured only when associated with energy consumed by the customer (Export Energy).

14.0 NATIONAL METERING IDENTIFIER

We issue a **National Metering Identifier** (NMI) for each *supply point* in accordance with the relevant AEMO procedure.

We then invoice for *connection services* and *network use of system services* provided at each of those *supply points* using the approved (see clause 2.2) rate structure given in Appendix 1 for the Pricing Option as applicable (see clause 4).

As a general rule, each NMI attracts one individual Network Access Charge (see clause 6), and if the Pricing Option assigned is a Demand ToU according to clause 4.7, one individual Demand Charge (see clause 7.2). If there are multiple interval meters on a single NMI, the corresponding Chargeable Demand (see clause 7) will be a coincident one.

Exceptions are made for *supply points* to other *distribution network service providers* which are governed by a different set of rules.

15.0 VOLTAGES OF SUPPLY

We reserve the right to determine the voltage of supply for a particular customer based on the size and nature of the load to be connected. Voltage levels referred to in the prices are:

- a) Low Voltage (LV) - nominally 230 / 400 V;
- b) High Voltage (HV) - nominally 12.7 kV SWER, 11 or 22 kV; and
- c) Sub-Transmission (ST) - 33, 66 or 132 kV.

SECTION 4 – MISCELLANEOUS FEES AND CHARGES

16.0 CHARGES FOR MISCELLANEOUS SERVICES

In accordance with the AER New South Wales Distribution Determination 2009-10 to 2013-14, a *distribution network service provider* can levy miscellaneous charges for services relating indirectly to the conveyance of electricity. Appendices G and H of the AER New South Wales Distribution Determination 2009-10 to 2013-14 provide detailed information on the miscellaneous charges.

We will levy charges for these services on customers or their *retail suppliers*. If Endeavour Energy levies the charge on the *retail supplier*, then the *retail supplier* may decide to either absorb the charge or pass it through to the end use customer.

Please note that miscellaneous services do not cover any work of a contestable nature being carried out at a customer's premises.

16.1 Application of Miscellaneous Fees And Charges

The fees and charges set out below apply between 7.30am and 4pm on *business days (Normal Business Hours)*, unless specified otherwise in the AER New South Wales Distribution Determination 2009-10 to 2013-14. Additional costs may be incurred for work undertaken at the specific request of customers outside these times.

The Chief Engineer has the authority to waive any of the fees set out below in individual cases, dependent upon the circumstances

Miscellaneous Fees and Charges

Description of Fee or Charge	Excl. GST	Incl. GST	Rate Code
1. Supply of Conveyancing Information – Desk Inquiry The provision of information regarding the availability of supply, presence of Endeavour Energy equipment, power lines and like information for property conveyancing purposes undertaken without any physical inspection of a site, other than the provision of information or the answering of inquiries relating to any matter under freedom of information legislation. * GST is not applicable	\$37.00	\$37.00*	none
2. Supply of Conveyancing Information – Field Visit The provision of information regarding the availability of supply, presence of Endeavour Energy equipment, power lines and like information for property conveyancing purposes undertaken by a physical inspection of a site, other than the provision of information or the answering of inquiries relating to any matter under freedom of information legislation. * GST is not applicable	\$73.00	\$73.00*	none
3. Meter Test The testing of a meter in accordance with Clause 6.4 of the Market Operations Rule (NSW Rules for Electricity Metering) No.3 of 2001 (except for metering installation types 1 to 4, the testing of which is an unregulated distribution service).	\$73.00	\$80.30	MT01
4. Special Meter Reading This service: a) has the same meaning as the meaning given to the expression ‘special meter read’ in the Market Operations Rule (NSW Rules for Electricity Metering) No.3 of 2001 (but excludes any special meter reading of metering installation types 1 to 4, which is an unregulated distribution service), and applies to the following circumstances:			

Description of Fee or Charge	Excl. GST	Incl. GST	Rate Code
b) where a customer or retail supplier requests that Endeavour Energy undertake a special meter read (but does not apply where the special meter read was requested solely to verify the accuracy of a scheduled meter read and the special meter read reveals that the scheduled meter read was inaccurate or in error), or c) where Endeavour Energy attends at a customer's premises for the sole purpose of discharging Endeavour Energy's obligation to read the customer's meter within the period specified by law (but not where Endeavour Energy merely chooses to read the customer's meter without being under a legal obligation to do so), and on attending the customer's premises, Endeavour Energy is unable (through no act or omission of Endeavour Energy) to gain access to the meter, or d) where Endeavour Energy and the customer agree on an appointed time at which Endeavour Energy may attend the customer's premises to enable Endeavour Energy's legal obligation referred to in section 4.c) and when Endeavour Energy attended at the customer's premises at the appointed time but (through no act or omission of Endeavour Energy) was unable to gain access to the customer's meter.	\$44.00	\$48.40	AM01 / AM02 / AM03 / AM04
5. Disconnection A site visit to a customer's premises on an occasion for the purpose of disconnecting the customer's supply of electricity for breach by the customer of a customer supply contract or a customer connection contract, or where a retail supplier has requested that the supply to the customer to be disconnected, and			
<i>Disconnection Visit (Evidence of Payment Produced)</i> a) The disconnection does not occur on that occasion - for example, because of non-payment of an amount due under the contract or non-payment of a security, but we do not proceed with disconnection because the customer produces evidence of payment of such amount or security, or access to the meter box cannot be obtained (through no act or omission of Endeavour Energy), and similar occurrences - the personal visit fee is: <i>Disconnection at Meter Box</i> b) The disconnection occurs at the meter box via either the main switch or service fuse removal: <i>Disconnection at Pole Top / Pillar Box</i> c) The disconnection occurs at a pole top / pillar box where the customer has denied access to the meter, or had prior to the visit, reconnected supply without authorisation by Endeavour Energy following a previous disconnection: The fee applicable in section 5.b) and 5.c) includes reconnection of supply following the disconnection.	\$44.00 \$88.00 \$148.00	\$48.40 \$96.80 \$162.80	CDH3 CDF3 / CDM3 DS18

Description of Fee or Charge	Excl. GST	Incl. GST	Rate Code
6. Rectification of Illegal Connection Work undertaken by Endeavour Energy to its own property, or to the property of another person in order to a) rectify damage or b) prevent injury to persons or property, resulting from conduct that constitutes an offence under Part 6, division 1 of the Electricity Supply Act 1995.	\$221.00	\$243.10	CI03
7. Controlled Load Conversion The alteration of the off-peak (controlled load) meter at a customer's premises for the purpose of changing the hours of the meter's operation, the fees for which are a) for the first change to or from a Controlled Load Pricing Option within any 12 month period b) for each additional change to or from a Controlled Load Pricing Option within the same 12 month period	Free \$59.00	Free \$64.90	none DM02
8. Reconnection Outside Normal Business Hours a) The provision of the reconnection component of the services described in section 5) outside the hours of 7.30 am and 4.00 pm on a working day, at the request of a customer or b) The connection of electricity to a new customer outside the hours of 7.30 am and 4.00 pm on a working day at the request of the customer. For reasons of Occupational Health & Safety, any reconnection as in section 8.a), or any connection as in section 8.b), are only available at a meter box.	\$95.00	\$104.50	AC02

Please note:

Other fees and charges may also be applicable under special circumstances. For example, there are fees and charges relating to contestable work, connection services and asset relocations. Please contact us on **131 081**, or visit our web site <http://www.endeavourenergy.com.au/>.

IMPORTANT NOTES:

* = This is a Transitional Network Tariff applicable to selected large customers only. It is not available on application.

Network Tariff codes prefixed 'N' may appear on an invoice with a prefix 'EN'.

The inclining block thresholds are 1,750 kWh per quarter for Domestic (IBT) tariffs and 2,500 kWh per quarter for General Supply Non-ToU (IBT) tariffs.

All energy rates - with the exception of Controlled Load 1 & 2 (N50, N54) - include recovery of the Climate Change Fund contribution.

IMPORTANT NOTES:

Network Tariff codes prefixed 'NS' or 'NG' may appear on an invoice with the prefix 'GN' or 'GG', respectively.

The inclining block thresholds are 1,750 kWh per quarter for Domestic (IBT) tariffs and 2,500 kWh per quarter for General Supply Non-ToU (IBT) tariffs.

[1] This is a Transitional Network Tariff applicable to select large customers only. It is not available on application.

[2] NESN can be applied to a detented, single register, net metered installation determined ineligible for the NSW Solar Bonus Scheme.

[3] NESG can be applied to a single register gross metered installation determined ineligible for the NSW Solar Bonus Scheme.

[4] GENR can be applied to gross metered installations determined ineligible for the NSW Solar Bonus Scheme.

Eligibility for the NSW Solar Bonus Scheme (SBS) is outlined in the explanatory notes.

All energy rates - with the exception of Generated Energy - include recovery of the Climate Change Fund contribution.

Nightwatch	ENNW	0.0000	0.00000	5.8139	6.39529		
Other unmetered supplies	N90	0.5000	0.55000	9.5346	10.48806	11.4395	12.58345
IMPORTANT NOTE: The inclining block thresholds is 2,500 kWh per quarter for other unmetered supply tariffs. All energy rates include recovery of the Climate Change Fund contribution.							

APPENDIX 2: CONTROLLED LOAD APPLIANCES, TERMS AND CONDITIONS

Important Note: Any plugs and sockets are not permitted in any Controlled Load circuit under any circumstances.

Controlled Load 1

The Controlled Load 1 Pricing Option applies where specified appliances approved by the Chief Engineer are controlled by our equipment (see clause 5.3 of the Price List), so that supply may not be available between 7:00am and 10:00pm during Eastern Standard Time (EST) and during Daylight Saving Time (DST). Supply will be made available for selected periods between 10:00pm and 7:00am (EST and DST), as approved by the Chief Engineer.

Storage Water Heaters

In relation to a heating unit in a storage water heater, the following additional conditions must all be met:

- a) the rated hot water delivery of the storage water heater is not less than 100 litres, unless otherwise approved by the Chief Engineer;
- b) our equipment controls the supply of electricity to the heating unit in the storage heaters;
- c) the operation of any booster heating unit is controlled in such a way that simultaneous operation with the main heating units is not possible; and
- d) unless otherwise approved by the Chief Engineer, heating units must be arranged as multiples of 4.8 kW in accordance with the following table:

Rated Hot Water Delivery (in Litres)	Number and Rating of Heating Elements
Up to and including 400	1 x 4.8 kW
Above 400 and not exceeding 630	2 x 4.8 kW
Above 630	As necessary to provide the full amount of heat in approximately 8 hours, but in any case not more than 20 watts / litre rated hot water delivery.

Note: The above requirements may be varied where a Controlled Load element is provided as a booster for a solar water heater. Controlled Load elements are available to Domestic and General Supply small retail customers.

Other Appliances

In relation to swimming pool pumps, pool heating equipment, dishwashers, clothes dryers, washing machines and other appliances approved by the Chief Engineer (other than those described above) the following additional conditions must all be met:

- a) an approved storage water heater or storage space heater is also installed and supplied at the same Controlled Load 1 Pricing Option;

- b) each appliance is permanently connected to the fixed wiring;
- c) all Controlled Load circuits originate at the meter board and are controlled by our equipment so that supply is available during specified Controlled Load hours; and
- d) for pool heating, the equipment rating shall not exceed 520 watts per square metre of the water surface, unless approved by the Chief Engineer.

Noise Control

Local councils may impose conditions relating to the use or operation of equipment causing offensive noise. Air conditioners, swimming pool pumps and heat pump motors may be subject to such conditions and customers should consult the local council before arranging for such equipment to operate at night on Controlled Load.

Thermal Storage Space Heaters (Heat Banks)

In relation to thermal storage space heaters, the following additional conditions must be met:

- a) the thermal storage space heaters are controlled by our equipment and the aggregate rating is not less than 3 kW, and
- b) the property must utilise the Domestic Pricing Option.

Under Floor Heating

In relation to under floor heating, the following additional conditions must be met:

- a) the under floor heaters are controlled by our equipment and the aggregate rating is not less than 3 kW, and
- b) the property must utilise the Domestic Pricing Option.

Ice Storage Systems

Controlled Load 1 also applies to ice storage systems provided the unit is controlled by our equipment and the aggregate rating is not less than 3 kW.

Transfer Between Pricing Options

A switch that transfers equipment normally supplied as a Controlled Load to another Pricing Option is not permissible.

Existing Installations

Storage water heaters and thermal storage space heaters, previously approved for connection as a Controlled Load, will continue to be eligible for supply under the Controlled Load 1 Pricing Option.

Application of Controlled Load 1 Pricing Option

The Controlled Load 1 Pricing Option is only available to a *supply point* utilising the Domestic or the General Supply Non Time of Use pricing option.

Special conditions - single person and dual occupant aged person accommodation

Notwithstanding the rated hot water delivery requirements of the Controlled Load 1 Pricing Option, in the case of single and dual occupant aged person accommodation owned and controlled by the NSW Department of Housing, or some institution/charity

as defined by the Chief Engineer, the minimum rated hot water delivery may be reduced in accordance with the following table:

Number of Occupants in Property	Minimum Hot Water Delivery Rating	Minimum Kilowatt Rating
1	80 litres	3.6 kW
2	125 litres	3.6 kW

Controlled Load 2

The Controlled Load 2 Pricing Option applies where specified appliances approved by the Chief Engineer are controlled by our equipment (see clause 5.3 of the Price List), so that electricity is available for restricted periods not exceeding 17 hours in any period of 24 hours.

The same terms, conditions and restrictions as listed for Controlled Load 1 are applicable for Controlled Load 2, with the following exceptions:

- The Controlled Load 2 Pricing Option can be applied to an electric heat pump with a minimum tank size of 250 litres, but that pump cannot be consequently transferred to the Controlled Load 1 Pricing Option.
- The Controlled Load 2 Pricing Option does not apply to Ice Storage Systems.
- Special conditions - single person and dual occupant aged person accommodation - the following table replaces the one applicable to Controlled Load 1:

Number of Occupants in Property	Minimum Hot Water Delivery Rating	Minimum Kilowatt Rating
1 or 2	80 litres	3.6 kW

Application of Controlled Load 2 Pricing Option

The Controlled Load 2 Pricing Option is only available to a *supply point* utilising the Domestic or the General Supply Non Time of Use pricing option.

APPENDIX 3: DISTRIBUTION LOSS FACTORS

Distribution Loss Factor (DLF) codes and values, including those applicable within the Endeavour Energy *distribution system*, are published by AEMO on their web site at:

<http://www.aemo.com.au>

These DLF codes and values are effective from 01 July 2012, 00.00 h EST, and subject to change as deemed necessary by AEMO.

If you have any questions concerning a DLF assigned to a particular NMI within the Endeavour Energy *distribution system* (NMI beginning with either NEEE... or 431...) please contact:

Network Connections

Telephone: (02) 9853 7944

Fax: (02) 9853 7903

E-mail: aspmail@endeavourenergy.com.au

APPENDIX 4: APPLICATIONS FOR A CHANGE OF NETWORK PRICING OPTION

In accordance with the Endeavour Energy Network Pricing Proposal, the following changes to Network Pricing Options may be approved on application:

Domestic Customers (Low Voltage)	Currently applicable Network Pricing Option	Application for changing Network Pricing Option to
All Domestic (Residential) Customers	N70, NC01 or NC02 N70, NC01 or NC02	N705 N706
General Supply (Business and Small Industrial) Low Voltage Customers	Currently applicable Network Pricing Option	Application for changing Network Pricing Option to
Yearly Total Consumption less than 160,000 kWh ('small')	N90, NC03 or NC04 N90, NC03 or NC04 N84 N845	N84 N19 N19 N19
Yearly Total Consumption equal or greater than 160,000 kWh ('large')	N90, NC03 or NC04 N84 N845	N19 N19 N19
High Voltage Customers (11 or 22 kV)	Currently applicable Network Pricing Option	Application for changing Network Pricing Option to ...
All High Voltage Customers	N90 N84	N29 N29
Sub-transmission Customers (132, 66 or 33 kV)	Currently applicable Network Pricing Option	Application for changing Network Pricing Option to ...
All Sub-transmission Customers	N90 N84	N39 N39

Please note that

- Endeavour Energy cannot accept any application not filed by a *retail supplier*, for example applications from consultants or directly from customers
- If a *retail supplier* files an application for a change to a different Network Pricing Option less than 12 months after the effective date of the preceding application, a fee may be payable (see also SFCCC Clause 8.2);
- Controlled Load conversions are not part of this process;
- Transitional Network Pricing Options according to Clause 4.8 are not available on application;
- A customer can only move away from a Demand-based Network Pricing Option if a history of consistently low consumption (less than 160,000 kWh) over the twelve months preceding the date of the application can be established in a manner satisfactory to Endeavour Energy. In this event the choice of Network Pricing Option is limited to N84 General Supply ToU.
- All applications must include the electronic form FBS 3000 and be emailed to

Customertransfers@endeavourenergy.com.au

Form FBS 3000 is available upon request, from that same email address.

Endeavour Energy reserves the right to not process any application for Change in Network Pricing Option, which:

- does not have form FBS 3000 attached;
- is not sent to the email address given above;
- has missing or incomplete data (see form FBS 3000);
- is not explicitly indicated in the preceding table;
- includes form FBS 3000 which is no longer in MS Excel format, or which has been altered in a way that no longer allows for it to be electronically processed;
- includes any NMI where the *retail supplier* filing that application is not the current *retail supplier*, or for which no corresponding transfer of *retail supplier* request is found in MSATS, at the time the application is received by Endeavour Energy;
- includes any NMI where a change to the Metering Installation (see Metrology Procedures) has been made, but the **Metering Provider / Accredited Service Provider** carrying out that change has yet to lodge a **Notification of Service Works** with Endeavour Energy

The **Notification of Service Works (NOSW)** is a notification form as required in the Endeavour Energy Network Management Plan 2011-2013.

In accordance with the Network Management Plan, Chapter 2 Clause 6, any NOSW (Form FPJ 4503) must indicate particulars of work carried out by the **Accredited Service Provider (ASP)** involved, and be sent (faxed) within two days of the completion of such work to this contact

Network Connections

Telephone: (02) 9853 7944

Fax: (02) 9853 7903

E-mail: aspmail@endeavourenergy.com.au

Form FPJ 4503 is available upon request, from the same contact.

Statement about Processing of Applications for Change of Network Pricing Option

Endeavour Energy maintains it is the responsibility of the *retail supplier* to be aware of the needs of a customer at any time, and apply for a change in Network Price to Endeavour Energy as the Distribution Network Service Provider (DNSP), in an appropriate, compliant and timely manner.

While N90 is Endeavour Energy's default network price for non-domestic customers, Demand-based tariffs at any voltage of supply require an interval meter to be installed at the customer's premises by a Metering Provider, which is a contestable service within the NEM. Without an established energy consumption history, Endeavour Energy can do little to oblige a network customer to enter a contract with any Metering Provider, though an interval meter is prescribed for a customer in NSW using equal or more than 160,000 kWh per annum, according to the *Market Operations Rule No. 3 of NSW (2001)*. As a consequence, Endeavour Energy has to treat 'Greenfield sites', or customers that have not signed a contract with a *retail supplier* which includes installation of a suitable interval meter, as basic metered by default, at least in the initial stages of their existence.

On the preceding page, a schematic process overview is given, with the numerals indicating the sequence in which the individual steps are supposed to be carried out.

As a matter of policy, further to what is laid out in the Endeavour Energy *Standard Form Customer Connection Contract* governing how applications for change in network prices are processed (Clause 8 "Variation of Pricing Option" requires 30 days notice to ensure proper procedures can be followed through, before the end of the billing cycle to which the new Network Pricing Option is intended to apply - if approved), Endeavour Energy does not backdate any change in network pricing in cases where a *retail supplier* (or the Metering Provider, or the ASP, acting on behalf of the *retail supplier* or the customer) fails to adhere to the given process.
