

Changes to metering charges

Type 6 metering changes

Energex is implementing changes to how customers pay for individual metering connections and personalised metering enhancements / alterations from 1 July 2015 to align with National Rules set by the Australian Energy Regulator (AER). This will result in changes to how customers are charged for some metering services, known as Type 6 meters.

What is changing?

Type 6 Metering will consist of two charges:

1. Upfront Meter Installation Service Charge from 1 August 2015

The AER requires customers to pay a specific upfront charge for the installation of meters that includes new connections and additions and alterations. Previously these costs were shared amongst all customers through their electricity charges and they are now moving to a user pays based system outlined by the AER.

The following are examples of the base business hours Install Meter service prices that Energex can charge for Type 6 metering installations (excluding GST):

- | | |
|---------------------------|----------|
| • Single Phase, 1 Element | \$259.21 |
| • Load Control | \$292.05 |
| • Solar PV | \$273.28 |

**Note: These are the three most common meter installation types for other services including polyphase and CT metering please refer to the Energex 2015/16 Tariff Schedule.*

If Energex can reprogram a meter instead of installing a new meter a reconfiguration fee will be charged instead of the installation fee. This fee is \$91.53 for a basic reconfiguration charge. Charges are expected to be included in the bill you receive from your electricity retailer.

While the fees apply from 1 July, due to the late AER changes Energex has made the decision to delay the charging of these services until 1 August to enable the external communications to impacted stakeholders to be delivered.

**Note: Energex standard meter offering comprises of a single phase, 1 element meter. Where a customer requires anything other than the standard meter offering the retailer/electrical contractor will need to notify Energex and the applicable fee (outlined in Energex's Tariff Schedule) will be charged.*

2. Metering Service Charge from 1 July 2015

A daily fixed charge will be introduced that allows Energex to recover the cost for the provision of Type 6 Metering Services including Meter Provision, Meter Reading, Meter Maintenance and Meter Data Services. The charges will be applied based on the number of customer tariffs; the costs are outlined below.

- | | |
|-----------------------|---------------------|
| • Primary tariff | 9.668 cents per day |
| • Load control tariff | 2.899 cents per day |
| • Solar PV tariff | 6.767 cents per day |

For further Meter Installation Services prices please refer to the Energex Tariff Schedule 2015/16 which is available on the Energex website
