

Ergon Energy Corporation Limited

Network Price Book

2004-2005

Network Price List - Contestable Customers
(Network Use of System Prices)

To apply from 1 July 2004

Prices in this Network Price Book are GST Inclusive

Precis of Changes for 2004-05

Updated DUOS rates in Tables 1, 2, 3 & 4

Updated TUOS Table 5 for Standard Asset Customers

Updated values in Distribution Loss Factor Table 6

Network Price Book

1. INTRODUCTION

1.1 Who this Price Book Applies To

This Network Price Book has been developed for Network Users (contestable customers and embedded generators) connected to Ergon Energy Corporation Limited's distribution supply network. It sets out network prices and application rules for customer connection services after the customer has entered the contestable electricity market.

The Mt Isa zone is not connected to the National Grid and as such is excluded from the application of the National Electricity Code. Presently, the contestable electricity market is not available to Mt Isa zone customers.

NOTE: The Queensland gazetted Retail Electricity Prices for non-contestable customers apply to:

- (i) customers not yet eligible to be contestable (<100 MWh franchise customers); and
- (ii) those customers who are eligible to be contestable but who have not entered the contestable electricity market.

1.2 Where are Prices Derived From?

The Queensland Competition Authority, as the Jurisdictional Regulator under the National Electricity Code, has released its Final Determination "Regulation of Electricity Distribution", May 2001.

The Final Determination sets out the process for network price development to be applied for the regulatory control period, and requires that prices be published annually.

Ergon Energy has a "Network Pricing Principles Statement" (PPS) originally approved by the Queensland Competition Authority (QCA) in May 2001, which sets out the steps for price development. The PPS has been revised for 2004-05 and the revisions were approved by QCA in April 2004

1.3 Where Can More Information Be Obtained?

In accordance with the QCA's requirements, Ergon Energy publishes 3 documents relating to distribution network pricing:

- (i) a "Network Pricing Principles Statement" which sets out the approach to be adopted during the regulatory control period 2001-02 to 2004-05.

-
- (ii) this "Network Price Book" which is applicable to the 2004-05 financial year.
 - (iii) a "Guide to Transmission Network Connection Point by Postcode & Pricing Zone" that can be used to assist with the process of referencing the customers to a Transmission Network Connection Point.

These documents are available on the Ergon Energy web site at:

http://www.ergon.com.au/network_info/price_guide.asp

1.4 How To Contact Ergon Energy Corporation Limited

Network users and Retailers who are uncertain about the network pricing process, or their particular circumstances are encouraged to contact us for assistance.

CONTACT DETAILS

**Network Pricing Manager
P O Box 1090
TOWNSVILLE Q 4810**

Ph (07) 4727 6683

FAX: (07) 4727 6849

E-mail: netprice@ergon.com.au

2. COMMON TERMS

- (a) AD – means Authorised Demand in kilowatts
- (b) CAC - means Connection Asset Customers
- (c) DLF - means Distribution Loss Factor
- (d) DNSP - means Distribution Network Service Provider
- (e) DUOS - means Distribution Use of System.
- (f) EG - means Embedded Generators
- (g) ICC - means Individually Calculated Customers
- (h) Network Prices – consist of rates for DUOS and TUOS
- (i) NMI - means National Metering Identifier
- (j) Pricing Zones – means East, West and Mt Isa zones
- (k) ROC - means Retailer of Choice
- (l) SAC - means Standard Asset Customers
- (m) TNI - means Transmission Node Identifier
- (n) TUOS - means Transmission Use of System.

3. ADDITIONAL CONTRACTUAL PROVISIONS

The following contractual provisions in relation to distribution network price application apply to all contestable customers without Negotiated Customer Connection Contracts in addition to the provisions of the Standard Customer Connection Contract developed by Ergon Energy and approved by the Office of Energy:

- (a) NMIs for customers with site-specific prices are listed in Appendix 1. This table of NMIs should be checked prior to determining applicable network rates for customers, as these site-specific prices are the only option of Network Prices for these customers.
- (b) The distribution network price category applied by Retailers will be subject to review in line with the following provisions:
 - (i) Ergon Energy may review the distribution network price category selected by the customer or their ROC after the customer enters the market. The purpose of this provision is to ensure customers enter the market under the appropriate network price category.
 - (ii) Ergon Energy must give the customer at least one month's notice of a proposed change in their distribution network price category.

-
- (iii) The customer may elect to review the applied distribution network price category six months after entering the contestable market.
 - (iv) After the initial six month period, the customer shall only be able to request that their distribution network price category be changed once in any twelve month period at no cost, unless there has been a substantial step load change.
 - (v) Changes in distribution network price category will only proceed upon approval by Ergon Energy.
 - (vi) Any change of distribution network price category will take effect from the commencement of the next billing period.
- (c) Demand and/or volume are to be measured at each individual network connection point.
 - (d) Where Ergon Energy's load control relays and metering exist, they may not be disconnected without the DNSPs prior written consent.
 - (e) Customers or their ROC will be billed on a monthly basis.
 - (f) Where applicable, the fixed, service availability and demand charges will be calculated on a pro rata daily basis for initial and final accounts.

4. DISTRIBUTION LOSS FACTORS (DLFs)

4.1 General Information

- (a) The DLF is a multiplier used to convert the customer's actual metered energy into the equivalent energy passing through the appropriate Transmission Network Connection Point by allowing for the distribution network losses that the customer's energy usage causes between their meter and the Transmission Network Connection Point.
- (b) The DLF is a multiplier applied to the metered consumption for the calculation of TUOS volume charges. DLFs are generally assigned on the basis of the standard metering voltage for the type of connection however a specific loss factor may be applied where there is a unique network configuration supplying a particular customer.
- (c) Every contestable customer must have a DLF. The appropriate DLF is associated with the location of their metering point.
- (d) The DLFs applicable to all Ergon Energy contestable customers including site-specific DLFs for some larger ICCs, CACs and EGs are published on the NEMMCO web site:

<http://nemmco.com.au/>
- (e) Where site-specific DLFs have not been published the DLFs from Table 6 will apply.

-
- (f) Detailed information about the purpose and application of DLFs may also be obtained from the NEMMCO web site.

4.2 DLF Rules

- (a) The DLFs in this guide do **NOT** apply to ICC customers and EGs with individually calculated loss factors.
- (b) DLFs for all ICCs, CACs, and EGs will be included in the Schedule of Network Charges issued to the customer and/or their ROC.
- (c) The zonal boundaries are identical to those used for the Network Prices.
- (d) For SACs, the customer or ROC must nominate the DLF appropriate to the connection. The customer or ROC may be required to justify any nominated DLF.
- (e) The DLFs will be reviewed and published on a periodic basis in line with the requirements of the National Electricity Code.
- (f) Where the voltage at the metering point is not listed, or there is doubt about the application of these rules, please request advice from Ergon Energy.

4.3 DLF Categories

- (a) **Subtransmission Bus** – Applicable to bus connection points that are HV metered at a voltage greater than 30kV.
- (b) **Subtransmission Line** – Applicable to line connection points that are HV metered at a voltage greater than 30kV.
- (c) **22/11kV Bus** - Applicable to bus connection points that are HV metered at a voltage less than 30kV and greater than 1,000 volts.
- (d) **22/11kV Line** – Applicable to line connection points that are HV metered at a voltage less than 30kV and greater than 1,000 volts.
- (e) **Low Voltage Bus** - Applicable to bus connection points that are LV metered at a voltage lower than 1,000 volts.
- (f) **Low Voltage Line** – Applicable to line connection points that are LV metered at a voltage lower than 1,000 volts.

4.4 DLF Applications

(a) Subtransmission and 22/11kV Bus

If customers believe that they qualify for a high voltage Bus DLF rather than a high voltage Line DLF they should submit details justifying their claim to their DNSP. As an example, customers who are supplied from a zone substation by dedicated 22/11kV lines and are metered at or immediately adjacent to the zone substation would be eligible for a 22/11kV Bus DLF.

Furthermore, customers who are supplied from a zone substation by dedicated greater than 30kV lines and are metered at or immediately adjacent to the zone substation would be eligible for a Subtransmission Bus DLF.

Zone substations are defined as substations where the voltage level is stepped down from a voltage greater than 30kV.

(b) Subtransmission Line

The Subtransmission Line DLF will apply to all customers who are connected to high voltage subtransmission lines (greater than 30kV) and are metered at the same voltage as the line is energised.

(c) 22/11kV Line

The 22/11kV Line DLF will apply to all customers who are connected to high voltage distribution lines and are metered at the same voltage as the line is energised.

(d) LV Bus

Customers who are supplied from a distribution substation on their site (owned or leased) and are metered at the low voltage level are eligible for a LV Bus DLF.

(e) LV Line

All customers not covered by any of the above categories

5. TRANSMISSION NODE IDENTIFIERS (TNIs)

(a) Ergon Energy advises Retailers of the TNI applicable to particular customers at the time of issuing Certificates of Contestability. If uncertain, customers and Retailers should confirm the TNI by contacting Ergon Energy.

(b) A guide to TNIs related to postcodes and zones is available on the Ergon Energy web site. Caution should be applied when using this guide as there are many places in the Ergon Energy supply area where regions represented by a single postcode can have a number of different TNIs.

6. SIDE CONSTRAINTS

(a) DUOS

It is a requirement of QCA that a customer's individual annual network distribution price increase must not exceed CPI plus 5%. Where a customer's price increase exceeds this amount, Ergon Energy has produced a site-specific, or side-constrained price, that will be issued directly to the customer and/or the customer's ROC.

(b) TUOS

Ergon Energy agreed with QCA that a customer's individual annual network transmission price increase for 2003-04 would not receive an increase greater than 5% (real) above the average increases for the transmission connection point to which they are connected. These side constraints will continue but only apply to those customers who met the criteria in 2003-04 prices.

7. INDIVIDUALLY CALCULATED CUSTOMERS (ICCs)

7.1 Definition

ICCs are those customers:

- (a) with energy consumption typically greater than 40 GWh/year; or
- (b) where a customer's circumstances in a pricing zone mean that the average shared network charge becomes meaningless or distorted.

7.2 DUOS Prices

- (a) DUOS Network Prices are based on:
 - (i) site-specific charges based on the actual network assets utilised; and
 - (ii) include both dedicated and shared assets.
- (b) DUOS Prices incorporate a Fixed Charge (\$/month), a Capacity Charge (\$/kW of AD/month), an Actual Demand Charge (\$/kW/month) and a Volume Charge (c/kWh).

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

- (c) DUOS Prices for ICCs are site-specific and are available to the customer and/or their ROC, with the customer's written consent, on application to Ergon Energy.
- (d) NMIs for customers with site-specific prices are listed in Appendix 1.

7.3 TUOS Prices

- (a) TUOS charges are calculated and levied by Powerlink to Ergon Energy and are passed through on a reflective basis proportional to the Authorised Demand of the customer and their energy consumption.
- (b) TUOS Prices incorporate a Fixed Charge (\$/month), a Capacity Charge (\$/kW/month), a Common Service & General Charge (\$/month) and a Volume Charge (c/kWh)

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

To determine the total TUOS volume charge, the customer energy must be multiplied by the customer DLF and then applied to the TUOS c/kWh rate.

- (c) TUOS Prices for ICCs are site-specific and are available to the customer and/or their ROC, with the customer's written consent, on application to Ergon Energy.
- (d) NMIs for customers with site-specific prices are listed in Appendix 1.

8. CONNECTION ASSET CUSTOMERS (CACs)

8.1 Definition

CACs are those customers:

- (a) with energy consumption typically greater than 4 GWh/year; or
- (b) where significant network augmentation is required to effect the connection.

8.2 DUOS Prices

- (a) DUOS Network Prices are based on:
 - (i) site-specific fixed charges based on the actual connection assets utilised; plus
 - (ii) average shared distribution network charges
- (b) DUOS Prices incorporate a Fixed Charge (\$/month), a Capacity Charge (\$/kW of AD/month), an Actual Demand Charge (\$/kW/month) and a Volume Charge (c/kWh).

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

- (c) Site-specific fixed charges are not published in the public domain. Ergon Energy will provide the total distribution network price directly to the customer and/or their ROC with the customer's written consent.

-
- (d) NMIs for customers with site-specific prices are listed in Appendix 1
 - (e) The Capacity Charge, Actual Demand Charge and Volume Charge components of CAC prices for each zone are published in Tables 1 and 2. These tables do **NOT** include TUOS.

8.3 TUOS Prices

- (a) TUOS charges are calculated and levied by Powerlink to Ergon Energy and are passed through on a reflective basis proportional to the Authorised Demand of the customer and their energy consumption.
- (b) TUOS Prices incorporate a Fixed Charge (\$/month), a Capacity Charge (\$/kW/month), a Common Service & General Charge (\$/month) and a Volume Charge (c/kWh)

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

To determine the total TUOS volume charge, the customer energy must be multiplied by the customer DLF and then applied to the TUOS c/kWh rate.

- (c) TUOS Prices for CACs are site-specific and are available to the customer and/or their ROC, with the customer's written consent, on application to Ergon Energy.
- (d) NMIs for customers with site-specific prices are listed in Appendix 1.

9. EMBEDDED GENERATORS (EGs)

9.1 Definition

EGs can be separated into two categories

- (a) EGs that are connected to and only generate into the distribution system.
- (b) EGs that are connected to, generate and take load from the distribution system.

9.2 DUOS Prices

- (a) For those EGs that only generate into the distribution system
 - (i) DUOS Price consists of a Fixed Charge (\$/month).
 - (ii) DUOS Prices for EGs are site-specific and are available to the generator.
 - (iii) NMIs for EGs are listed in Appendix 1.
- (b) For those EGs that generate into and take load from the distribution system
 - (i) DUOS Price for generated energy consists of a Fixed Charge (\$/month) and

-
- (ii) DUOS Price for load taken from the distribution system will be allocated as per the appropriate Network Price category selected from ICCs, CACs or SACs.
 - (iii) DUOS Prices for EGs are site-specific and are available to the generator.
 - (iv) NMIs for EGs are listed in Appendix 1.

9.3 TUOS Prices

- (a) For those EGs that only generate into the distribution system.
 - (i) TUOS price for generated energy does not apply.
- (b) For those EGs that generate into and take load from the distribution system
 - (i) TUOS price for generated energy does not apply.
 - (ii) TUOS Price for load taken from the distribution system will be allocated as per the appropriate Network Price category selected from ICCs, CACs or SACs.

10. STANDARD ASSET CUSTOMERS (SACs)

10.1 Definition

SACs are those customers:

- (a) with energy consumption typically greater than 100 MWh/year; or
- (b) where the network prices are based on the averages of both the shared distribution network charges and connection charges for the Network User Group in the particular zone

10.2 DUOS Prices

- (a) DUOS Network Prices are based on:
 - (i) the average of the connection charges and
 - (ii) the average of the shared distribution network charges.
- (b) DUOS Prices incorporate a Service Availability Charge (\$/month), a Demand Charge (\$/kW/month) and a Volume Charge (c/kWh).

The Minimum Chargeable Demand will be applied for each month where the monthly maximum demand fails to exceed this value.

- (c) Distribution network prices for SACs for each zone are published in Tables 3 and 4. These tables do **NOT** include TUOS.

-
- (d) NMIs for customers with site-specific prices are listed in Appendix 1.
 - (e) The Network Price category applicable to a customer will be as nominated by the customer or their ROC from among the following categories:
 - (i) ***Demand High Voltage (EDH or WDH)*** is available to customers who have high voltage metering and take supply at high voltage. This category is **NOT** available to customers with non-standard or significant connection arrangements, who have distribution transformer(s) provided by Ergon Energy, or to customers who are metered at other than high voltage.
 - (ii) ***Demand Large (EDL or WDL), Demand Medium (EDM or WDM) and Demand Small (EDS or WDS)*** are available to all SACs. The network price categories are self-selecting with customers' load characteristics determining the optimum category.
 - (f) Where a customer has a change in their load characteristics, it is the customer's responsibility to review their network prices to determine if a different network price category is appropriate.
 - (g) A ***Special Small Volume*** price is available to contestable customers who since becoming contestable have reduced their energy consumption below 100 MWh per year. The application of this network price category is subject to the agreement of Ergon Energy, and customers must make specific application to Ergon Energy to access this price category. This price category is subject to annual review and may not be offered if an alternative network price is made available.

10.3 TUOS Prices

- (a) TUOS charges are calculated and levied by Powerlink to Ergon Energy and are passed through to SACs calculated as an "average" for each Transmission Network Connection Point .
- (b) TUOS prices incorporate a Fixed Charge (\$/ month), Demand Charge (\$/kW/month) and Volume Charge (c/kWh).

The Minimum Chargeable Demand will be applied for each month where the monthly maximum demand fails to exceed this value.

To determine the total TUOS volume charge, the customer energy must be multiplied by the customer DLF and then applied to the TUOS c/ kWh rate from Table 5 for the TNI applicable to the customer.

- (c) NMIs for customers with site-specific prices are listed in Appendix 1.
- (d) DLFs have been assigned on the basis of the standard metering voltage for the type of connection.

11. ZONES

11.1 Number of Zones

Three pricing zones have been delineated in the Ergon Energy area of supply, broadly based on Local Government areas of Queensland and apply to DUOS prices only. TUOS prices are not impacted by zones.

- (a) **East Zone** - includes those Local Government areas where the Network Users are supplied from the distribution system connected to the National Grid and having a relatively low cost to supply.
- (b) **West Zone** - includes those Local Government areas outside the East Zone and connected to the National Grid, which have a significantly higher distribution cost of supply than the East Zone.
- (c) **Mount Isa Zone** - broadly defined as those local government areas supplied from the isolated Mount Isa system. This zone is not connected to the National Grid and as such is excluded from the application of the Code. However, oversight of the network cost to supply the zone as a whole is carried out by the Jurisdictional Regulator.

11.2 Definitions of Zones

- (a) The **East Zone** consists of:

The cities of Bundaberg, Cairns, Gladstone, Hervey Bay, Mackay, Maryborough, Rockhampton, Thuringowa, Toowoomba and Townsville;

The Town of Dalby;

The whole of the Shires of Atherton, Banana, Biggenden, Bowen, Broadsound, Burdekin, Burnett, Calliope, Cambooya, Cardwell, Clifton, Duaringa, Eacham, Eidsvold, Fitzroy, Gayndah, Hinchinbrook, Isis, Johnstone, Jondaryan, Kingaroy, Kolan, Livingstone, Milmerran, Mirani, Miriam Vale, Monto, Mt Morgan, Munduberra, Murgon, Nanango, Nebo, Perry, Pittsworth, Rosalie, Sarina, Wambo, Warwick, Whitsunday, Wondai, and Woocoo;

Parts of the Shires of Belyando, Boonah, Cooloola, Crows Nest, Esk, Douglas, Gatton, Herberton, Inglewood, Kilkivan, Mareeba, Peak Downs, Stanthorpe, and Tiaro.

Specific Parts of these shires are:

- (a) Belyando - Moranbah township;
- (b) Boonah, Cooloola, Crows Nest, Esk, Gatton, Inglewood, Kilkivan, Stanthorpe and Tiaro - Ergon Energy supply area only;
- (c) Douglas - area south of the Daintree River
- (d) Herberton and Mareeba - Atherton Tableland area supplied from the "East" distribution system;
- (e) Peak Downs - Tieri township.

-
- (b) The **West Zone** consists of:

The City of Charters Towers;

The Town of Roma;

The whole of the Shires of Aramac, Barcaldine, Bauhinia, Bendemere, Blackall, Booringa, Bulloo, Bungil, Carpentaria, Chinchilla, Cook, Croydon, Dalrymple, Emerald, Etheridge, Flinders, Ilfracombe, Isisford, Jericho, Longreach, McKinlay, Murilla, Murweh, Paroo, Quilpie, Richmond, Tambo, Taroom, Warroo, and Winton;

Parts of the Shires of Balonne, Belyando, Douglas, Herberton, Mareeba, Peak Downs, Tara and Waggamba.

Specific Parts of these shires are:

- (a) Balonne, Tara and Waggamba - Ergon Energy supply area only ;
- (b) Belyando - other than Moranbah township;
- (c) Douglas - North of the Daintree River not excluded by the Distribution Authority;
- (d) Herberton and Mareeba - other than the Atherton Tableland area.
- (e) Peak Downs - other than Tieri township.

- (c) The **Mt Isa Zone** consists of:

The City of Mt Isa

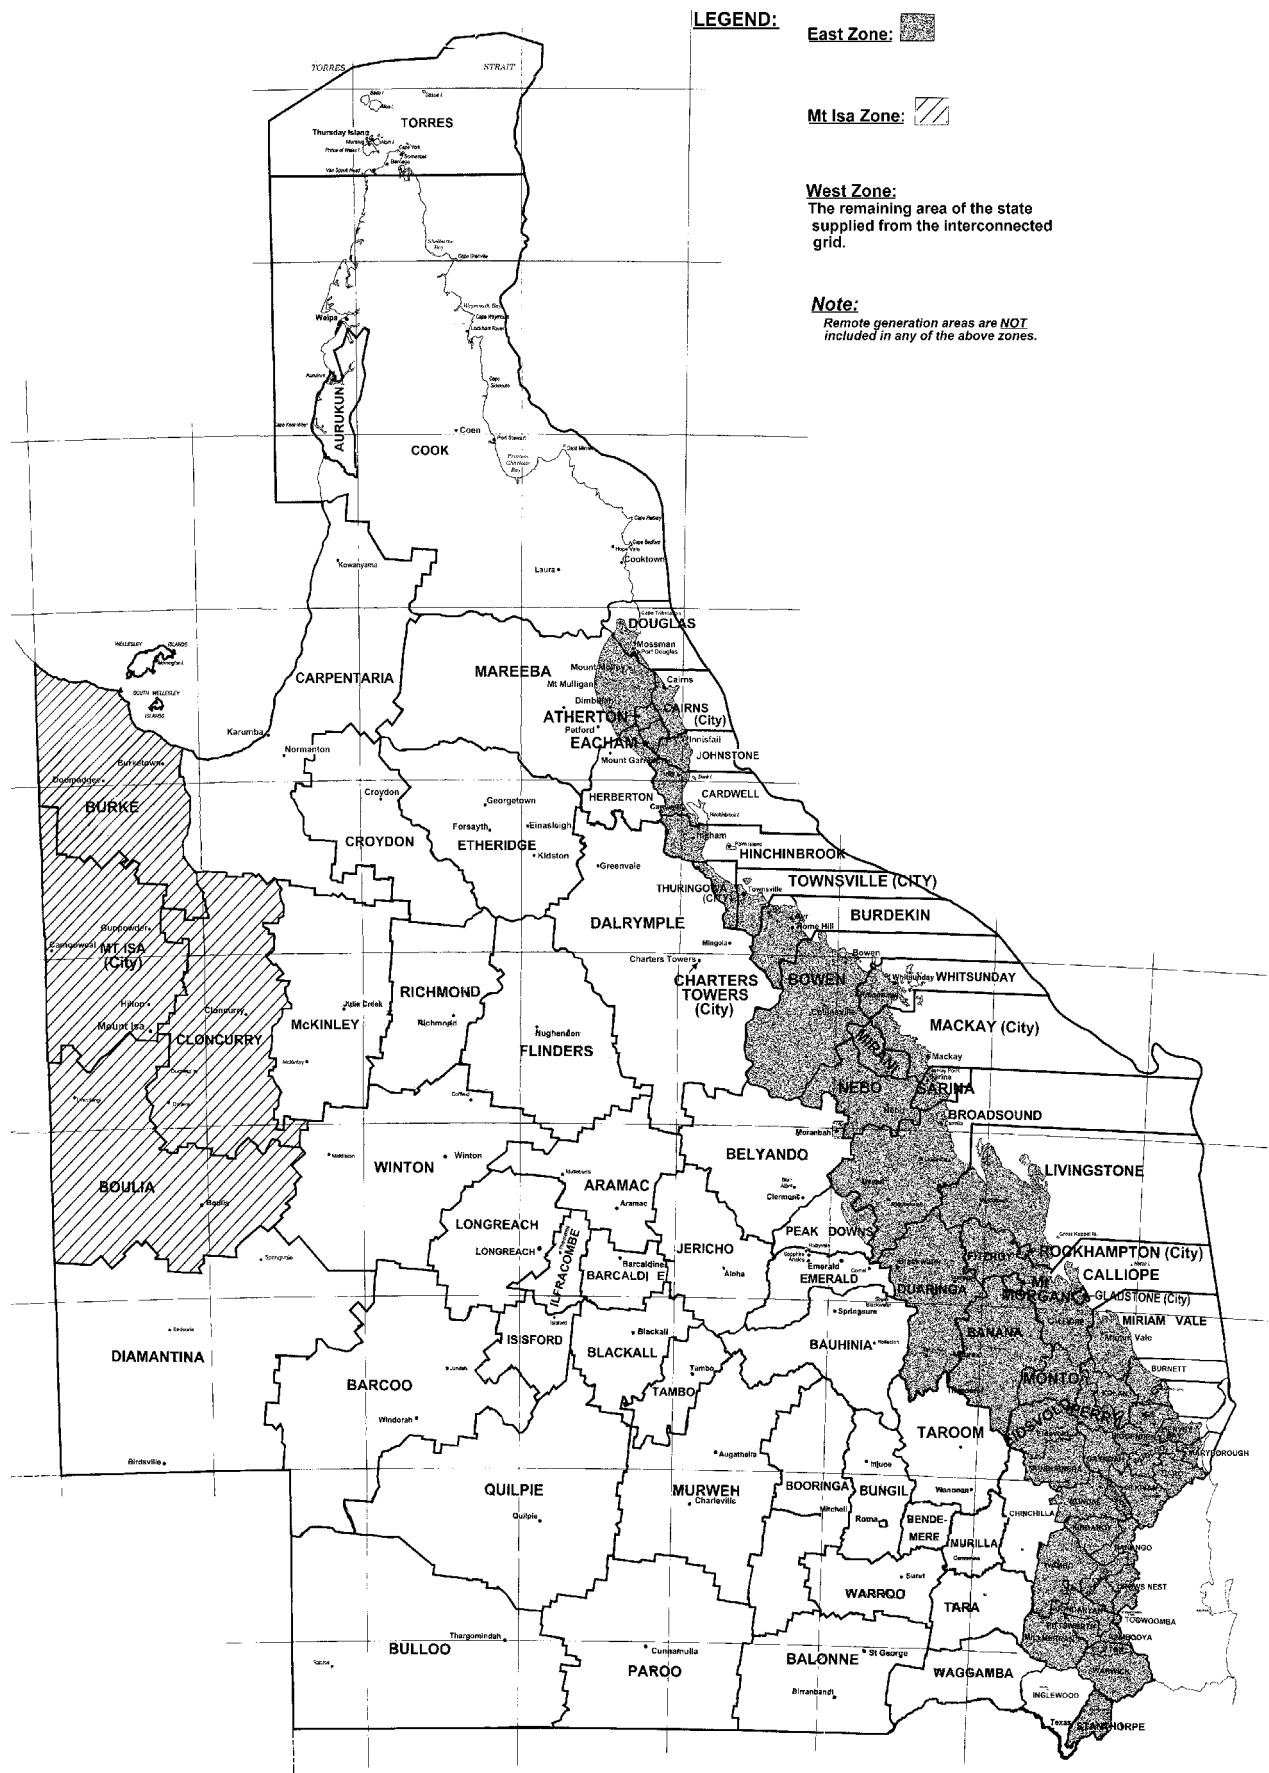

The whole Shire of Cloncurry

Parts of the Shires of Burke and Boulia which are supplied from the Mt Isa system

- (d) NOTE: those areas supplied from isolated generation are **NOT** included in any of the above zones.

11.3 Zone Map

The following map depicts the East, West and Mount Isa Zones.

12. **TABLES 1 & 2 – CAC PRICES for SHARED NETWORK COMPONENTS**

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 1 - East Zone						
Distribution Use Of System (DUOS) Prices for Connection Asset Customers						
These tables do NOT include TUOS. TUOS charges are site-specific and available on request.						
Network Charge Category	Network Charge Description	Default Distribution Loss Factor	Fixed Charge \$/month	Capacity Charge \$/kW/month	Actual Demand Charge \$/kW/month	Volume Charge c/kWh
CAC66	66kV	1.022	Site Specific	\$1.1583	\$0.8679	0.2002
CAC33	33kV	1.022	Site Specific	\$1.5598	\$0.8899	0.2002
CAC 22/11B	22/11kV Bus	1.023	Site Specific	\$2.2517	\$1.1781	0.2002
CAC 22/11L	22/11kV Line	1.042	Site Specific	\$5.0501	\$2.6389	0.2002

Table 2 - West Zone						
Distribution Use Of System (DUOS) Prices for Connection Asset Customers						
These tables do NOT include TUOS. TUOS charges are site-specific and available on request.						
Network Charge Category	Network Charge Description	Default Distribution Loss Factor	Fixed Charge \$/month	Capacity Charge \$/kW/month	Actual Demand Charge \$/kW/month	Volume Charge c/kWh
WCAC66	66kV	1.079	Site Specific	POA	POA	POA
WCAC33	33kV	1.079	Site Specific	\$17.1622	\$53.3049	0.5445
WCAC 22/11B	22/11kV Bus	1.090	Site Specific	POA	POA	POA
WCAC 22/11L	22/11kV Line	1.127	Site Specific	\$23.9118	\$19.4535	0.5445

Notes on Tables:

1. Demand and/or volume are to be measured at each individual distribution network connection point.
2. The CAC Fixed Charge is dependent upon the assets dedicated to the network user and therefore is site-specific.
3. Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.
4. These tables do **NOT** include TUOS. TUOS for CACs is site-specific and is available from Ergon Energy on request.
5. POA – Price on Application.
6. NMIs for customers with site-specific prices are listed in Appendix 1.

13. TABLES 3 & 4 – SAC NETWORK PRICES

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 3 - East Zone						
Distribution Use Of System (DUOS) Prices for Standard Asset Customers						
(These tables do NOT include TUOS, add on TUOS from Table 5)						
Network Charge Category	Network Charge Description	Default Distribution Loss Factor	Minimum Chargeable Demand kW	Service Availability Charge \$/month	Demand Charge \$/kW/month	Volume Charge c/kWh
EDH	High Voltage Demand	1.042	400	\$390.83	\$7.0829	0.2002
EDL	Large Demand	1.113	400	\$820.93	\$8.1356	0.2002
EDM	Medium Demand	1.113	120	\$336.93	\$9.3302	0.2002
EDS	Small Demand	1.113	30	\$33.00	\$11.8426	0.2002

Table 4 - West Zone						
Distribution Use Of System (DUOS) Prices for Standard Asset Customers						
(These tables do NOT include TUOS, add on TUOS from Table 5)						
Network Charge Category	Network Charge Description	Default Distribution Loss Factor	Minimum Chargeable Demand kW	Service Availability Charge \$/month	Demand Charge \$/kW/month	Volume Charge c/kWh
WDH	High Voltage Demand	1.127	400	\$387.75	\$33.7337	0.5445
WDL	Large Demand	1.179	400	\$821.48	\$40.8584	0.5445
WDM	Medium Demand	1.179	120	\$362.56	\$41.9958	0.5445
WDS	Small Demand	1.179	30	\$46.86	\$44.6138	0.5445

Notes on Tables :

1. Demand and/or volume are to be measured at each individual distribution network connection point.
2. Minimum Chargeable Demand will be applied for each month where the monthly maximum demand fails to exceed this value.
3. These tables do **NOT** include TUOS. Add TUOS from Table 5.
4. NMIs for customers with site-specific prices are listed in Appendix 1.

14. **TABLE 5 – TUOS FOR SACs**

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 5 - Transmission Use of System Charges for SAC > 100MWh Customers				
NOTE 1: Customer energy must be multiplied by customer distribution loss factor to obtain the correct TUOS kWh, then apply the Volume Charge c/kWh. NOTE 2: The demand to be used for the demand charge is the greater of the monthly maximum demand or the Minimum Chargeable Demand from Table 3 or 4.				
Transmission Connection Point	TNI	Fixed charge \$/mth	Demand Charge \$/kW/mth (see Note 2)	Volume Charge c/kWh (see Note 1)
Alligator Creek	QALC	\$47.52	\$1.0835	0.8074
Alan Sheriff	QASF	\$564.74	\$1.1869	0.8657
Biloela	QBIL	\$50.05	\$0.5313	0.6380

15. **TABLE 6 - STANDARD DISTRIBUTION LOSS FACTORS**

The following table of DLFs has been approved by the QCA and published by NEMMCO for the 2004-05 year.

Table 6 - Customers' Distribution Loss Factors for 2004-05						
Network Customer	Subtransmission Bus	Subtransmission Line	22/11kV Bus	22/11kV Line	Low Voltage Bus	Low Voltage Line
East Zone	1.008	1.022	1.023	1.042	1.068	1.113
West Zone	1.023	1.079	1.090	1.127	1.159	1.179

APPENDIX 1 - TABLE of NMIs

If the customer's NMI appears in this list, contact Ergon Energy for site-specific prices. (Refer Section 1.4 for contact details)
