

Ergon Energy Corporation Limited

Network Price Book

2005-2006

Network Price List - Contestable Customers & Non-contestable Customers
(Network Use of System Prices)

To apply from 1 July 2005

Prices in this Network Price Book are GST Inclusive

Précis of Changes for 2005-06

- For information only - Inclusion of DUOS & TUOS rates and applicable details applying to:
 - o SAC < 100MWh

Ergon Energy Corporation Limited ABN 50 087 646 062

Release 3

Date: 23 December 2005

Network Price Book

1. INTRODUCTION

1.1 Who this Price Book Applies To

This Network Price Book has been developed for Network Users (contestable customers and embedded generators) connected to Ergon Energy Corporation Limited's distribution supply network. It sets out network prices and application rules for customer connection services after the customer has entered the contestable electricity market.

Presently, the contestable electricity market is not available to Mt Isa zone customers. Network Prices for Mt Isa customers will not be published until the availability of a contestable market under Full Retail Competition is known.

NOTE: The Queensland gazetted Retail Electricity Prices for non-contestable customers apply to:

- (i) those customers who are eligible to be contestable but who have not entered the contestable electricity market; and
- (ii) customers not yet eligible to be contestable (<100 MWh and Unmetered Supplies).

The Network Charges shown in this Price Book for not yet eligible to be contestable customers, i.e. SAC <100 MWh, are for information only and are NOT charged to any individual customer. These categories of network charges will become available with the introduction of FRC on 1 July 2007. QCA has not approved some of these Network Charges and those not approved are specifically noted throughout this Price Book.

1.2 Where are Prices Derived From?

The Queensland Competition Authority (QCA), as the Jurisdictional Regulator under the National Electricity Code, has released its Final Determination "Regulation of Electricity Distribution", April 2005.

The Final Determination sets out the process for network price development to be applied for the new regulatory period 1 July 2005 to 30 June 2010, and requires that prices be published annually.

Ergon Energy has a "Network Pricing Principles Statement" (PPS) approved by the Queensland Competition Authority in April 2005, which sets out the steps for price development.

1.3 Where Can More Information Be Obtained?

In accordance with the QCA's requirements, Ergon Energy publishes 3 documents relating to distribution network pricing:

- (i) a "Network Pricing Principles Statement" which sets out the approach to be adopted during the regulatory control period 2005-06 to 2009-10.
- (ii) this "Network Price Book" which is applicable to the 2005-06 financial year.
- (iii) a "Guide to Transmission Network Connection Point by Postcode & Pricing Zone" that can be used to assist with the process of referencing the customers to a Transmission Network Connection Point.

These documents are available on the Ergon Energy web site at:

http://www.ergon.com.au/network_info/price_guide.asp

1.4 **How To Contact Ergon Energy Corporation Limited**

Network users and Retailers who are uncertain about the network pricing process or their particular circumstances are encouraged to contact us for assistance.

CONTACT DETAILS

**Network Pricing Manager
P O Box 1090
TOWNSVILLE Q 4810**

Ph (07) 4727 6683

FAX: (07) 4727 6849

E-mail: netprice@ergon.com.au

2. COMMON TERMS

- (a) AD – means Authorised Demand in kilowatts
- (b) CAC - means Connection Asset Customer
- (c) DLF - means Distribution Loss Factor
- (d) DNSP - means Distribution Network Service Provider
- (e) DUOS - means Distribution Use of System.
- (f) EG - means Embedded Generators
- (g) FRC – Full Retail Competition
- (h) ICC - means Individually Calculated Customer
- (i) Network Prices – consist of rates for DUOS and TUOS
- (j) NMI - means National Metering Identifier
- (k) Pricing Zones – means East, West and Mt Isa zones
- (l) ROC - means Retailer of Choice
- (m) SAC - means Standard Asset Customer
- (n) TNI - means Transmission Node Identifier
- (o) TUOS - means Transmission Use of System.

3. ADDITIONAL CONTRACTUAL PROVISIONS

The following contractual provisions in relation to distribution network price application apply to all contestable customers without Negotiated Customer Connection Contracts in addition to the provisions of the Standard Customer Connection Contract developed by Ergon Energy and approved by the Office of Energy:

- (a) NMIs for customers with site-specific prices are listed in Appendix 1. This table of NMIs should be checked prior to determining applicable network rates for customers.
- (b) The distribution network price category applied by Retailers will be subject to review in line with the following provisions:
 - (i) Ergon Energy may review the distribution network price category selected by the customer or their ROC after the customer enters the market. The purpose of this provision is to ensure customers enter the market under the appropriate network price category.
 - (ii) Ergon Energy must give the customer at least one month's notice of a proposed change in their distribution network price category.

- (iii) The customer may elect to review the applied distribution network price category six months after entering the contestable market.
- (iv) After the initial six month period, the customer shall only be able to request that their distribution network price category be changed once in any twelve month period at no cost, unless there has been a substantial step load change.
- (v) Changes in distribution network price category will only proceed upon approval by Ergon Energy.
- (vi) Any change of distribution network price category will take effect from the commencement of the next billing period.
- (c) Demand and/or volume are to be measured at each individual network connection point.
- (d) Where Ergon Energy's load control relays and metering exist, they may not be disconnected without the DNSPs prior written consent.
- (e) Customers or their ROC will be billed on a monthly basis.
- (f) Where applicable, the fixed, service availability and demand charges will be calculated on a pro rata daily basis for initial and final accounts.

4. DISTRIBUTION LOSS FACTORS (DLFs)

4.1 General Information

- (a) The DLF is a multiplier used to convert the customer's actual metered energy into the equivalent energy passing through the appropriate Transmission Network Connection Point by allowing for the distribution network losses that the customer's energy usage causes between their meter and the Transmission Network Connection Point.
- (b) The DLF is applied to the metered consumption for the calculation of TUOS volume charges. DLFs are generally assigned on the basis of the standard metering voltage for the type of connection however a specific loss factor may be applied where there is a unique network configuration supplying a particular customer.
- (c) Every contestable customer must have a DLF. The appropriate DLF is associated with the location of their metering point.
- (d) The DLFs applicable to all Ergon Energy contestable customers including site-specific DLFs for some larger ICCs, CACs and EGs are published on the NEMMCO web site:

<http://nemmco.com.au/>
- (e) Where site-specific DLFs have not been published the DLFs from Table 10 will apply.

- (f) Detailed information about the purpose and application of DLFs may also be obtained from the NEMMCO web site.

4.2 DLF Rules

- (a) The DLFs in this guide do **NOT** apply to ICC customers and EGs with individually calculated loss factors.
- (b) DLFs for all ICCs, CACs, and EGs will be included in the Schedule of Network Charges issued to the customer and/or their ROC.
- (c) The zonal boundaries are identical to those used for the Network Prices.
- (d) For SACs, the customer or ROC must nominate the DLF appropriate to the connection. The customer or ROC may be required to justify any nominated DLF.
- (e) The DLFs will be reviewed and published on a periodic basis in line with the requirements of the National Electricity Code.
- (f) Where the voltage at the metering point is not listed, or there is doubt about the application of these rules, please request advice from Ergon Energy.

4.3 DLF Categories

- (a) **Subtransmission Bus** – Applicable to connection points that are HV metered at a Subtransmission Bus with a voltage greater than 30kV.
- (b) **Subtransmission Line** – Applicable to connection points that are HV metered at a Subtransmission Line with a voltage greater than 30kV.
- (c) **22/11kV Bus** - Applicable to connection points that are HV metered at a 22/11kV Bus with a voltage less than 30kV and greater than 1,000 volts.
- (d) **22/11kV Line** – Applicable to connection points that are HV metered at a 22/11kV Line with a voltage less than 30kV and greater than 1,000 volts.
- (e) **Low Voltage Bus** - Applicable to connection points that are LV metered at a Low Voltage Bus with a voltage lower than 1,000 volts.
- (f) **Low Voltage Line** – Applicable to connection points that are LV metered at a Low Voltage Line with a voltage lower than 1,000 volts.

4.4 DLF Applications

- (a) **Subtransmission and 22/11kV Bus**

If customers believe that they qualify for a high voltage Bus DLF rather than a high voltage Line DLF they should submit details justifying their claim to their DNSP. As an example, customers who are supplied from a zone substation by dedicated

22/11kV lines and are metered at or immediately adjacent to the zone substation would be eligible for a 22/11kV Bus DLF.

Furthermore, customers who are supplied from a zone substation by dedicated greater than 30kV lines and are metered at or immediately adjacent to the zone substation would be eligible for a Subtransmission Bus DLF.

Zone substations are defined as substations where the voltage level is stepped down from a voltage greater than 30kV.

(b) **Subtransmission Line**

The Subtransmission Line DLF will apply to all customers who are connected to high voltage subtransmission lines (greater than 30kV) and are metered at the same voltage as the line is energised.

(c) **22/11kV Line**

The 22/11kV Line DLF will apply to all customers who are connected to high voltage distribution lines and are metered at the same voltage as the line is energised.

(d) **LV Bus**

Customers who are supplied from a distribution substation on their site (owned or leased) and are metered at the low voltage level are eligible for a LV Bus DLF.

(e) **LV Line**

All customers not covered by any of the above categories

5. **TRANSMISSION NODE IDENTIFIERS (TNIs)**

- (a) Ergon Energy advises Retailers of the TNI applicable to particular customers at the time of issuing Certificates of Contestability. If uncertain, customers and Retailers should confirm the TNI by contacting Ergon Energy.
- (b) A guide to TNIs related to postcodes and zones is available on the Ergon Energy web site. Caution should be applied when using this guide as there are many places in the Ergon Energy supply area where regions represented by a single postcode can have a number of different TNIs.

6. **SIDE CONSTRAINTS**

(a) **DUOS**

It is a requirement of QCA that a customer's individual annual network distribution price increase must not exceed CPI plus 5%. Where a customer's price increase exceeds this amount, Ergon Energy has produced a site-specific or side-constrained price that will be issued directly to the customer and/or the customer's ROC.

(b) TUOS

Ergon Energy has agreed with QCA that a number of customers will have side constraints applied to their TUOS Prices. Where Ergon Energy has produced a site-specific or side-constrained TUOS price that will be issued directly to the customer and/or the customer's ROC.

7. INDIVIDUALLY CALCULATED CUSTOMERS (ICCs)

7.1 Definition

ICCs are those customers:

- (a) with energy consumption typically greater than 40 GWh/year; or
- (b) Customers with energy consumption lower than 40 GWh per annum where:
 - (i) a customer has a dedicated supply system which is quite different and separate from the remainder of the supply network; or
 - (ii) there are only two or three customers in a supply system making average prices inappropriate; or
 - (iii) a customer is connected at or close to a transmission connection point and the inclusion of the cost of average shared network would increase their network price above stand-alone; or
 - (iv) inequitable treatment of otherwise comparable customers arising from the 40 GWh threshold.

7.2 DUOS Prices

- (a) DUOS Network Prices are based on:
 - (i) the actual dedicated connection assets utilised by the customer; plus;
 - (ii) the customer's specifically identified portion of any shared distribution network utilised for the electricity supply.
- (b) DUOS Prices incorporate a Fixed Charge (\$/month), a Capacity Charge (\$/kW of AD/month), an Actual Demand Charge (\$/kW/month) and a Volume Charge (c/kWh).

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.
- (c) DUOS Prices for ICCs are site-specific and are available to the customer and/or their ROC, with the customer's written consent, on application to Ergon Energy.
- (d) NMIs for customers with site-specific prices are listed in Appendix 1.

7.3 TUOS Prices

- (a) TUOS charges are calculated and levied by Powerlink to Ergon Energy and are passed through on a reflective basis proportional to the Authorised Demand of the customer and their energy consumption.
- (b) TUOS Prices incorporate a Fixed Charge (\$/month), a Capacity Charge (\$/kW/month), a Common Service & General Charge (\$/month) and a Volume Charge (c/kWh)

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

To determine the total TUOS volume charge, the customer energy must be multiplied by the customer DLF and then applied to the TUOS c/kWh rate.

- (c) TUOS Prices for ICCs are site-specific and are available to the customer and/or their ROC, with the customer's written consent, on application to Ergon Energy.
- (d) NMIs for customers with site-specific prices are listed in Appendix 1.

8. CONNECTION ASSET CUSTOMERS (CACs)

8.1 Definition

CACs are those customers:

- (a) with energy consumption typically greater than 4 GWh/year, or
- (b) Customers may be classed as a CAC with energy consumption lower than 4 GWh per annum where:
 - (i) a customer has a dedicated supply system which is quite different and separate from the remainder of the supply network; or
 - (ii) inequitable treatment of otherwise comparable customers arising from the 4 GWh threshold

8.2 DUOS Prices

- (a) DUOS Network Prices are based on:
 - (i) the actual dedicated connection assets utilised by the customer; plus
 - (ii) average charges for use of the shared network
- (b) DUOS Prices incorporate a Fixed Charge (\$/month), a Capacity Charge (\$/kW of AD/month), an Actual Demand Charge (\$/kW/month) and a Volume Charge (c/kWh).

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

- (c) Site-specific fixed charges are not published in the public domain. Ergon Energy will provide the total distribution network price directly to the customer and/or their ROC with the customer's written consent.
- (d) NMIs for customers with site-specific prices are listed in Appendix 1
- (e) The Capacity Charge, Actual Demand Charge and Volume Charge components of CAC prices for each zone are published in Tables 1 and 2. These tables do **NOT** include TUOS.

8.3 **TUOS Prices**

- (a) TUOS charges are calculated and levied by Powerlink to Ergon Energy and are passed through on a reflective basis proportional to the Authorised Demand of the customer and their energy consumption.
- (b) TUOS Prices incorporate a Fixed Charge (\$/month), a Capacity Charge (\$/kW/month), a Common Service & General Charge (\$/month) and a Volume Charge (c/kWh)

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

To determine the total TUOS volume charge, the customer energy must be multiplied by the customer DLF and then applied to the TUOS c/kWh rate.

- (c) TUOS Prices for CACs are site-specific and are available to the customer and/or their ROC, with the customer's written consent, on application to Ergon Energy.
- (d) NMIs for customers with site-specific prices are listed in Appendix 1.

9. **EMBEDDED GENERATORS (EGs)**

9.1 **Definition**

EGs can be separated into two categories

- (a) EGs that are connected to and only generate into the distribution system.
- (b) EGs that are connected to, generate into as well as take load from the distribution system.

9.2 **DUOS Prices**

- (a) For those EGs that only generate into the distribution system
 - (i) DUOS Price consists of a Fixed Charge (\$/month).
 - (ii) DUOS Prices for EGs are site-specific and are available to the generator.
 - (iii) NMIs for EGs are listed in Appendix 1.
- (b) For those EGs that generate into as well as take load from the distribution system

- (i) DUOS Price for generated energy consists of a Fixed Charge (\$/month) and
- (ii) DUOS Price for load taken from the distribution system will be allocated as per the appropriate Network Price category selected from ICCs, CACs or SACs.
- (iii) DUOS Prices for EGs are site-specific and are available to the generator.
- (iv) NMIs for EGs are listed in Appendix 1.

9.3 TUOS Prices

- (a) For those EGs that only generate into the distribution system.
 - (i) TUOS price for generated energy does not apply.
- (b) For those EGs that generate into as well as take load from the distribution system
 - (i) TUOS price for generated energy does not apply.
 - (ii) TUOS Price for load taken from the distribution system will be allocated as per the appropriate Network Price category selected from ICCs, CACs or SACs.

10. STANDARD ASSET CUSTOMERS >100 MWh Per Annum (SACs >100MWh)

10.1 Definition

SACs > 100 MWh are those customers:

- (a) with energy consumption typically greater than 100 MWh/year; or
- (b) where the network prices are based on the averages of both the shared distribution network charges and connection charges for the Network User Group in the particular zone
- (c) currently eligible to enter the contestable electricity market

10.2 DUOS Prices

- (a) DUOS Network Prices are based on:
 - (i) the average of the connection charges and
 - (ii) the average of the shared distribution network charges.
- (b) DUOS Prices incorporate a Service Availability Charge (\$/month), a Demand Charge (\$/kW/month) and a Volume Charge (c/kWh).

The Minimum Chargeable Demand will be applied for each month where the monthly maximum demand fails to exceed this value.

- (c) Distribution network prices for SACs > 100 MWh for the East and West zones are published in Tables 3 and 4. These tables do **NOT** include TUOS.

Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

- (d) NMIs for customers with site-specific prices are listed in Appendix 1.
- (e) The Network Price category applicable to a customer will be as nominated by the customer or their ROC from among the following categories:
 - (i) **Demand High Voltage (EDH or WDH)** is available to customers who have high voltage metering and take supply at high voltage. This category is **NOT** available to customers with non-standard or significant connection arrangements, who have distribution transformer(s) provided by Ergon Energy, or to customers who are metered at other than high voltage.
 - (ii) **Demand Large (EDL or WDL), Demand Medium (EDM or WDM) and Demand Small (EDS or WDS)** are available to all SACs. The network price categories are self-selecting with customers' load characteristics determining the optimum category.
- (f) Where a customer has a change in their load characteristics, it is the customer's responsibility to review their network prices to determine if a different network price category is appropriate.
- (g) When a contestable network user's annual energy consumption falls below the current contestability threshold level (i.e. below 100 MWh per annum), the Queensland Electricity Regulation does not allow these network users to revert to franchise tariff.

To ensure these network users are not unfairly penalised Ergon Energy, at its discretion, may allow these network users to access the East or West Volume Large (EGVL or WGVL) rate, for both DUOS and TUOS, applicable to the SACs < 100MWh non-contestable network users in the appropriate zone, as currently approved by QCA.

The current approved rates are shown in Tables 6 and 7 for DUOS and in Table 8 for TUOS.

An example for when this may occur is when a site is closed down but the contestable network user still has responsibility for the site and leaves the supply connected for security purposes.

10.3 TUOS Prices

- (a) TUOS charges are calculated and levied by Powerlink to Ergon Energy and are passed through to SACs >100MWh calculated as an "average" for each Transmission Network Connection Point.
- (b) TUOS prices incorporate a Fixed Charge (\$/month), Demand Charge (\$/kW/month) and Volume Charge (c/kWh).

The Minimum Chargeable Demand will be applied for each month where the monthly maximum demand fails to exceed this value.

To determine the total TUOS volume charge, the customer energy must be multiplied by the customer DLF and then applied to the TUOS c/kWh rate from Table 5 for the TNI applicable to the customer.

Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

- (c) NMIs for customers with site-specific prices are listed in Appendix 1.
- (d) DLFs have been assigned on the basis of the standard metering voltage for the type of connection.

11. STANDARD ASSET CUSTOMERS <100 MWh Per Annum (SACs <100MWh)

11.1 Definition

SACs <100 MWh are those customers:

- (a) not eligible to enter the contestable electricity market until 1 July 2007
- (b) with energy consumption typically less than 100 MWh/year; or
- (c) where the network prices are based on the averages of both the shared distribution network charges and connection charges for the Network User Group in the particular zone; and

11.2 DUOS Prices

- (a) DUOS Network Prices are based on:
 - (i) the average of the connection charges and
 - (ii) the average of the shared distribution network charges.
- (b) DUOS Prices incorporate a Service Availability Charge (\$/month) and a Volume Charge (c/kWh).
- (c) Distribution network prices for SACs < 100MWh for the East and West zones are published in Tables 6 and 7. These tables do **NOT** include TUOS. Note that these Network Charges are shown for information only and are not available to customers at this time.

Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

- (d) The Network Price category applicable to a customer will be as nominated by the customer or their ROC from among the following categories:
 - (i) **Domestic Volume Large (EDVL or WDWL)** is applicable for domestic customers whose energy consumption is in the range of approximately 26 MWh to 100 MWh per annum.

- (ii) **Domestic Volume Small (EDVS or WDVS)** is applicable for domestic customers whose energy consumption is in the range of approximately 0 MWh to 26 MWh per annum.
 - (iii) **General Volume Large (EGVL or WGVL)** is applicable for non-domestic customers whose energy consumption is in the range of approximately 26 MWh to 100 MWh per annum.
 - (iv) **General Volume Small (EGVS or WGVs)** is applicable for non-domestic customers whose energy consumption is in the range of approximately 0 MWh to 26 MWh per annum.
- (e) There are additional Network Price categories that only apply to SAC < 100 MWh customers, where specified permanently connected appliances are controlled by our equipment¹.

The categories that may be nominated by the customer or their ROC are:

- (i) **Volume Night - Controlled (EVN or WVN)** applies where specified permanently connected appliances are controlled by our equipment so that supply will be available for a minimum period of 8 hours at the discretion of Ergon Energy but usually between the hours of 10:00pm and 7:00am.
- (ii) **Volume Controlled (EVC or WVC)** applies where specified permanently connected appliances are controlled by our equipment so that supply will be available for a minimum period of 18 hours per day during time periods set at the discretion of Ergon Energy.

Note that these Network Charges are shown for information only and are not available to customers at this time.

11.3 TUOS Prices

- (a) TUOS charges are calculated and levied by Powerlink to Ergon Energy and are passed through to SACs <100MWh calculated as an "average" across the Ergon Energy network. The charges approved by QCA are shown in Table 8.

¹ A controlled load pricing option only applies where electricity load is to permanently connected appliances; separately metered and controlled at a supply point.

Switching times will be managed to minimise network investment and meet customer needs for the load being controlled.

For the suitability of appliances and other tariff conditions, reference should be made to the Queensland Government "Tariff Gazette" (http://www.nrme.qld.gov.au/energy/electricity/franchise_prices.html)

Volume Night – Controlled equates to Tariff 31 and Volume Controlled equates to Tariff 33 in the Queensland Government "Tariff Gazette".

Due to the introduction of FRC, Ergon Energy proposes to alter the TUOS prices for SACs <100MWh in the future. Table 9 provides information on the likely direction of TUOS prices. Please note these are **prices QCA has not approved** and are provided for information only.

Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

- (b) TUOS prices incorporate a Fixed Charge (\$/month) and Volume Charge (c/kWh).

To determine the total TUOS volume charge, the customer energy must be multiplied by the customer DLF and then applied to the TUOS c/kWh rate.

Note that the TUOS Network Charges are shown for information only and are not available to customers at this time.

- (c) DLFs have been assigned on the basis of the standard metering voltage for the type of connection.

12. STANDARD ASSET CUSTOMERS – UNMETERED SUPPLIES

12.1 Definition

SACs – Unmetered Supplies are those connections:

- (a) currently not eligible to enter the contestable market
- (b) Which are unmetered, including public lamps, traffic signals, watchman lighting and temporary services;

Network prices for these customers will not be published until clarification is received on the treatment of unmetered supplies under a FRC environment.

Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

13. ZONES

13.1 Number of Zones

Three pricing zones have been delineated in the Ergon Energy area of supply, broadly based on Local Government areas of Queensland and apply to DUOS prices only. TUOS prices are not impacted by zones.

- (a) **East Zone** - includes those Local Government areas where the Network Users are supplied from the distribution system connected to the National Grid and having a relatively low cost to supply.
- (b) **West Zone** - includes those Local Government areas outside the East Zone and connected to the National Grid, which have a significantly higher distribution cost of supply than the East Zone.

- (c) **Mount Isa Zone** - broadly defined as those local government areas supplied from the isolated Mount Isa system. This zone is not connected to the National Grid and as such is excluded from the application of the Code. However, oversight of the network cost to supply the zone as a whole is carried out by the Jurisdictional Regulator.

13.2 Definitions of Zones

- (a) The **East Zone** consists of:

The cities of Bundaberg, Cairns, Gladstone, Hervey Bay, Mackay, Maryborough, Rockhampton, Thuringowa, Toowoomba and Townsville;

The Town of Dalby;

The whole of the Shires of Atherton, Banana, Biggenden, Bowen, Broadsound, Burdekin, Burnett, Calliope, Cambooya, Cardwell, Clifton, Duaringa, Eacham, Eidsvold, Fitzroy, Gayndah, Hinchinbrook, Isis, Johnstone, Jondaryan, Kingaroy, Kolan, Livingstone, Milmerran, Mirani, Miriam Vale, Monto, Mt Morgan, Munduberra, Murgon, Nanango, Nebo, Perry, Pittsworth, Rosalie, Sarina, Wambo, Warwick, Whitsunday, Wondai, and Woocoo;

Parts of the Shires of Belyando, Boonah, Cooloolo, Crows Nest, Esk, Douglas, Gatton, Herberton, Inglewood, Kilkivan, Mareeba, Peak Downs, Stanthorpe, and Tiaro.

Specific Parts of these shires are:

- (a) Belyando - Moranbah township;
- (b) Boonah, Cooloolo, Crows Nest, Esk, Gatton, Inglewood, Kilkivan, Stanthorpe and Tiaro - Ergon Energy supply area only;
- (c) Douglas - area south of the Daintree River
- (d) Herberton and Mareeba - Atherton Tableland area supplied from the "East" distribution system;
- (e) Peak Downs - Tieri township.

- (b) The **West Zone** consists of:

The City of Charters Towers;

The Town of Roma;

The whole of the Shires of Aramac, Barcaldine, Bauhinia, Bendemere, Blackall, Booringa, Bulloo, Bungil, Carpentaria, Chinchilla, Cook, Croydon, Dalrymple, Emerald, Etheridge, Flinders, Ilfracombe, Isisford, Jericho, Longreach, McKinlay, Murilla, Murweh, Paroo, Quilpie, Richmond, Tambo, Taroom, Warroo, and Winton;

Parts of the Shires of Balonne, Belyando, Douglas, Herberton, Mareeba, Peak Downs, Tara and Waggamba.

Specific Parts of these shires are:

- (a) Balonne, Tara and Waggamba - Ergon Energy supply area only ;
- (b) Belyando - other than Moranbah township;
- (c) Douglas - North of the Daintree River not excluded by the Distribution Authority;
- (d) Herberton and Mareeba - other than the Atherton Tableland area.
- (e) Peak Downs - other than Tieri township.

- (c) The **Mt Isa Zone** consists of:

The City of Mt Isa

The whole Shire of Cloncurry

Parts of the Shires of Burke and Boulia which are supplied from the Mt Isa system

- (d) NOTE: those areas supplied from isolated generation are **NOT** included in any of the above zones.

13.3 **Zone Map**

The following map depicts the East, West and Mount Isa Zones.

14. **TABLES 1 & 2 – CAC DUOS PRICES for SHARED NETWORK COMPONENTS**

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 1 - East Zone					
Distribution Use Of System (DUOS) Prices for Connection Asset Customers					
These tables do NOT include TUOS. TUOS charges are site-specific and available on request.					
Network Charge Category	Network Charge Description	Fixed Charge \$/month	Capacity Charge \$/kW/month	Actual Demand Charge \$/kW/month	Volume Charge c/kWh
ECAC66	66kV	Site Specific	\$2.5333	\$1.4487	0.2475
ECAC33	33kV	Site Specific	\$3.0019	\$1.6885	0.2475
ECAC 22/11B	22/11kV Bus	Site Specific	\$3.4661	\$1.8843	0.2475
ECAC 22/11L	22/11kV Line	Site Specific	\$6.8706	\$3.5607	0.2475

Table 2 - West Zone					
Distribution Use Of System (DUOS) Prices for Connection Asset Customers					
These tables do NOT include TUOS. TUOS charges are site-specific and available on request.					
Network Charge Category	Network Charge Description	Fixed Charge \$/month	Capacity Charge \$/kW/month	Actual Demand Charge \$/kW/month	Volume Charge c/kWh
WCAC66	66kV	Site Specific	POA	POA	POA
WCAC33	33kV	Site Specific	\$13.8479	\$41.0762	0.4741
WCAC 22/11B	22/11kV Bus	Site Specific	POA	POA	POA
WCAC 22/11L	22/11kV Line	Site Specific	\$20.4677	\$13.7313	0.4741

Notes on Tables:

1. Demand and/or volume are to be measured at each individual distribution network connection point.
2. The CAC Fixed Charge is dependent upon the assets dedicated to the network user and therefore is site-specific.
3. Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.
4. These tables do **NOT** include TUOS. TUOS for CACs is site-specific and is available from Ergon Energy on request.
5. POA – Price on Application.
6. NMIs for customers with site-specific prices are listed in Appendix 1.

15. **TABLES 3 & 4 – SACs > 100MWh DUOS PRICES**

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 3 - East Zone						
Distribution Use Of System (DUOS) Prices for Standard Asset Customers						
(These tables do NOT include TUOS, add on TUOS from Table 5)						
Network Charge Category	Network Charge Description	Default Distribution Loss Factor	Minimum Chargeable Demand kW	Service Availability Charge \$/month	Demand Charge \$/kW/month	Volume Charge c/kWh
EDH	High Voltage	1.048	400	\$457.71	\$9.5931	0.2497
EDL	Large Demand	1.124	400	\$914.85	\$11.2035	0.2497
EDM	Medium Demand	1.124	120	\$321.20	\$12.6874	0.2497
EDS	Small Demand	1.124	30	\$46.31	\$14.9798	0.2497

Table 4 - West Zone						
Distribution Use Of System (DUOS) Prices for Standard Asset Customers						
(These tables do NOT include TUOS, add on TUOS from Table 5)						
Network Charge Category	Network Charge Description	Default Distribution Loss Factor	Minimum Chargeable Demand kW	Service Availability Charge \$/month	Demand Charge \$/kW/month	Volume Charge c/kWh
WDH	High Voltage	1.105	400	\$431.42	\$28.7375	0.4752
WDL	Large Demand	1.195	400	\$982.96	\$43.7404	0.4752
WDM	Medium Demand	1.195	120	\$344.52	\$45.3365	0.4752
WDS	Small Demand	1.195	30	\$63.14	\$47.6861	0.4752

Notes on Tables:

1. Demand and/or volume are to be measured at each individual distribution network connection point.
2. Minimum Chargeable Demand will be applied for each month where the monthly maximum demand fails to exceed this value.
3. These tables do **NOT** include TUOS. Add TUOS from Table 5.
4. NMIs for customers with site-specific prices are listed in Appendix 1.
5. Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

16. **TABLE 5 –SACs > 100MWh TUOS PRICES**

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 5 - Transmission Use of System Charges for SAC > 100MWh Customers				
NOTE 1: Customer energy must be multiplied by customer distribution loss factor to obtain the correct TUOS kWh, then apply the Volume Charge c/kWh.				
NOTE 2: The demand to be used for the demand charge is the greater of the monthly maximum demand or the Minimum Chargeable Demand from Table 3 or 4.				
Transmission Connection Point	TNI	Fixed charge \$/mth	Demand Charge \$/kW/mth (see Note 2)	Volume Charge c/kWh (see Note 1)
Alligator Creek	QALC	\$49.50	\$0.9801	0.7898
Alan Sherriff	QASF	\$84.81	\$1.5246	0.8404
Biloela	QBIL	\$44.33	\$0.5654	0.6237
Blackwater	QBWL	\$46.97	\$0.8173	0.6930
Cardwell	QCDW	\$467.94	\$2.1681	1.1044
Clare	QCLR	\$39.60	\$1.4091	0.8965
Cairns (Cairns City)	QCNS	\$50.93	\$3.0415	1.2342
Collinsville	QCOL	\$123.09	\$1.1605	0.8019
Cairns	QCRN	\$72.27	\$2.7115	1.2705

Turkinje (Port Douglas)	QTUH	\$76.89	\$2.0119	1.0197
Turkinje	QTUL	\$38.72	\$1.6126	1.0846
Townsville South	QTVS	\$64.02	\$1.8546	0.8239
Woolooga	QWLG	\$11.66	\$0.4994	0.5907

1. Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

17. Table 6 & 7 – SAC < 100 MWh DUOS PRICES [FOR INFORMATION ONLY]

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 6 - East Zone				
Distribution Use Of System (DUOS) Prices for SAC < 100MWh				
(These tables do NOT include TUOS)				
Network Charge Category	Network Charge Description	Default Distribution Loss Factor	Service Availability Charge \$/month	Volume Charge c/kWh
EDVL	Domestic Large Volume	1.124	\$45.100	6.4020
EDVS	Domestic Small Volume	1.124	\$15.950	7.3799
EGVL	General Large Volume	1.124	\$45.100	6.4020
EGVS	General Small Volume	1.124	\$15.950	7.3799
EVC	Volume Controlled	1.124	\$2.420	0.4774
EVN	Volume Night - Controlled	1.124	\$2.310	0.1232

Table 7 - West Zone				
Distribution Use Of System (DUOS) Prices for SAC < 100MWh				
(These tables do NOT include TUOS)				
Network Charge Category	Network Charge Description	Default Distribution Loss Factor	Service Availability Charge \$/month	Volume Charge c/kWh
WDVL	Domestic Large Volume	1.195	\$77.110	20.3225
WDVS	Domestic Small Volume	1.195	\$24.530	20.6261
WGVL	General Large Volume	1.195	\$77.110	20.3225
WGVS	General Small Volume	1.195	\$24.530	20.6261
WVC	Volume Controlled	1.195	\$3.190	1.4498
WVN	Volume Night - Controlled	1.195	\$3.080	0.2860

Notes on Tables:

1. Volume is to be measured at each individual distribution network connection point.
2. These tables do **NOT** include TUOS.
3. Note that these Network Charges are shown for information only and are not available to customers at this time. These categories of network charges will become available with the introduction of Full Retail Competition on 1 July 2007.
4. Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

18. Table 8 – SAC < 100 MWh TUOS PRICES [FOR INFORMATION ONLY]

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 8 - East & West Zones			
Transmission Use Of System (TUOS) Prices for SAC < 100MWh			
As approved by QCA for 2005-06			
Customer Category	Default Distribution Loss Factor	Fixed Charge \$/month	Volume Charge c/kWh
SAC < 100 MWh	1.124	\$3.190	0.7216

Notes on Table:

1. These prices are as approved by QCA but are average prices for all of the Ergon supply area and do not include any locational signal. With the introduction of FRC, Ergon Energy proposes to alter the TUOS prices for SACs <100MWh to incorporate a locational signal, similar to Table 9 following. (Note that Table 9 are **prices QCA has not approved** and are provided for information only.)
2. To determine the total TUOS volume charge, the customer energy must be multiplied by the customer DLF and then applied to the TUOS c/kWh rate.
3. Note that these Network Charges are shown for information only and are not available to customers at this time. These categories of network charges will become available with the introduction of Full Retail Competition on 1 July 2007.
4. Network Prices for Mt Isa customers will not be published until the availability of a contestable market under FRC is known.

19. **TABLE 9 – LIKELY FUTURE DIRECTION OF SAC < 100 MWh TUOS PRICES [FOR INFORMATION ONLY]**

{These prices are GST Inclusive - to determine GST Exclusive divide by 1.1}

Table 9 - Transmission Use of System Charges for SAC < 100MWh Customers			
NOTE 1: Customer energy must be multiplied by customer distribution loss factor to obtain the correct TUOS kWh, then apply the Volume Charge c/kWh.			
Due to the introduction of FRC, Ergon Energy proposes to alter the TUOS prices for SACs <100MWh in the future. Table 9 provides information on the likely direction of TUOS prices. Please note QCA has not approved these prices and are provided for information only.			
Transmission Connection Point	TNI	Fixed charge \$/mth	Volume Charge c/kWh (see Note 1)
Alan Sherriff	QASF	\$4.73	0.8316
