Network Tariff Guide

1. INTRODUCTION

- Ergon Energy Corporation Limited (Ergon Energy) publishes an annual Network Tariff Guide which provides guidelines for Network Tariffs and rates for each Network Tariff Code.

1.1 Who this Tariff Guide applies to

Network Tariffs are a charge for the services associated with using the network to transport electricity from Generators to the end-use customer.

This Network Tariff Guide sets out Network Tariff Codes and application rules. Rates for each Network Tariff Code are included in this Tariff Guide.

This Tariff Guide has been developed for use by Customers, Retailers and Consultants and applies to Network Users connected to Ergon Energy Corporation Limited's distribution supply network (excluding the Mt Isa Zone).

Network Tariffs for Mt Isa customers are not explained in this Guide. Customers with metered consumption equal to or greater than 100MWh per annum can contact Ergon Energy for further information.

1.2 2008-09 Network Tariff Code Rates

Unless otherwise stated, the rates provided for each Network Tariff Code are GST Exclusive. Any GST payable will be added to the charges. Currently, the GST payable is an additional 10% of the listed prices.

1.3 Changes from previous years' publications

In 2007-08 the Network Tariff Code Rates were published separately on the Ergon Energy website in the Network Tariff Rate Listing; this has now been incorporated into this Tariff Guide.

1.4 Format of this Tariff Guide

Each Network customer category has a separate section within this Tariff Guide. Where applicable standard Network Tariff Codes – Descriptions and Rates are shown within those sections. Network Tariff Code Rates for customers with site specific prices are listed in Appendix 3.

Details on standard Distribution Loss Factors are provided in Section 5.

NMIs for customers with site-specific prices are listed in Appendix 2. This table of NMIs should be checked prior to determining applicable network rates for customers.

Site-specific prices are issued by Ergon Energy Network Pricing and are available with the customer's written consent. See section 1.7 for appropriate contact details.

1.5 How Tariffs are derived

The Queensland Competition Authority (QCA), as the Jurisdictional Regulator under the National Electricity Rules, has released its Final Determination "Regulation of Electricity Distribution", April 2005.

The Final Determination sets out the process for the development of network charges to be applied for the new regulatory period 1 July 2005 to 30 June 2010, and requires that Network Tariffs be published annually.

Ergon Energy has a "Network Pricing Principles Statement" (PPS) approved by the Queensland Competition Authority in January 2008, which sets out the steps for price development.

1.6 Where Can More Information Be Obtained?

In accordance with the QCA's requirements, Ergon Energy publishes 2 documents relating to distribution network pricing:

(a) A "Network Pricing Principles Statement" which sets out the approach to be adopted during the regulatory control period 2005-06 to 2009-10.

(b) This "Network Tariff Guide" which is applicable to the 2008-09 financial year.

These documents are available on the Ergon Energy web site at:

www.ergon.com.au/network_info/price_guide.asp

3. GENERAL REQUIREMENTS

The following general requirements apply to the selection and amendment of network tariffs:

- (a) It is intended that a Network Tariff Code will apply to each meter data stream. Network Users with multiple network connections will pay Network Charges for each connection point.

This approach is consistent with the NEMMCO issued NMI Procedure.

- (b) Ergon Energy may determine that the network tariff assigned to a NMI should be changed, other than as a result of a request (for example, in response to advice received from a customer regarding a change in usage). In such circumstances, Ergon Energy will advise the customer's Retailer of the decision taken.
- (c) Ergon Energy will not actively or periodically assess the appropriateness of the network tariffs applied to the customer's installation or to the customer's circumstances or usage. Ergon Energy will provide the customer or the

customer's Retailer with reasonable assistance in identifying the network tariffs applicable to the customer's installation, if requested.

- (d) A request may be made for a change to the network tariff assigned to a NMI:
 - (i) Any change in network tariff will only proceed upon approval by Ergon Energy.
 - (ii) The request should be made by the customer, through their Retailer.
 - (iii) Subject to a change in usage or the pattern of usage at the customer's installation, a further request to change the network tariff should not be made until a period of 12 months has elapsed from the previous request.
- (e) Demand and/or volume are to be measured at each individual network connection point.
- (f) Where Ergon Energy's load control equipment exists (including associated metering), this may not be disconnected without Ergon Energy's prior written consent.
- (g) Network charges will be billed by Ergon Energy on a monthly basis.
- (h) Any change of network tariff will take effect from the date as approved by Ergon Energy.
- (i) Where applicable, demand based charges will be calculated on a pro rata daily basis for initial and final accounts.

4. ZONES

4.1 Number of Zones

Three pricing zones have been delineated in the Ergon Energy area of supply, broadly based on Local Government areas of Queensland, with the distribution network electrical connection being the final determinant of which zone applies. Zone pricing impacts DUOS prices only; TUOS prices are not impacted by zones.

- a) **East Zone** - includes those areas where the Network Users are supplied from the distribution system connected to the National Grid and have a relatively low distribution cost to supply.
- b) **West Zone** - includes those areas outside the East Zone and connected to the National Grid, which have a significantly higher distribution cost of supply than the East Zone.
- c) **Mt Isa Zone** - broadly defined as those areas supplied from the isolated Mount Isa system. This zone is not connected to the National Grid and as such is excluded from the application of the National Electricity Rules. However, oversight of the network cost to supply the regulated network within the zone is carried out by the Jurisdictional Regulator.

NOTE: those areas supplied from isolated (remote) generation are **NOT** included in any of the above zones.

4.2 Definitions of Zones

a) The **East Zone** consists of:

The **whole** of the recently reviewed local government areas as follows,

(d) NOTE: those areas supplied from isolated generation are **NOT** included in any of the above zones.

4.3 Zone Map

The following map depicts the East Zone in red, Mount Isa Zone in yellow and the West Zone is the remaining area of the state supplied from the interconnected grid.

5. DISTRIBUTION LOSS FACTORS (DLFs)

5.1 General Information

- (a) Every NMI has a DLF code which is associated with the location of the metering point. The code's value is re-calculated periodically in line with the National Electricity Rules.
- (b) The DLF is a multiplier used to convert the actual metered energy into the equivalent energy passing through the appropriate Transmission Network Connection Point by allowing for the distribution network losses that are incurred between the meter and the Transmission Network Connection Point.
- (c) The DLF is applied to the metered consumption for the calculation of TUOS volume charges. DLFs are generally assigned on the basis of the standard metering voltage for the type of connection however a specific loss factor may be applied where there is a unique network supply configuration.
- (d) The 2008-09 DLFs including site-specific DLFs for some larger ICCs, CACs and EGs are published on the NEMMCO web site:

http://nemmco.com.au/transmission_distribution/171-0014.htm

- (e) Where site-specific DLFs have not been published, the DLFs from Table A (see section 5.2) will apply.
- (f) Detailed information about the purpose and application of DLFs may also be obtained from the NEMMCO web site.

5.2 Table A - Standard Distribution Loss Factors

The following table of DLFs has been approved by the QCA and published by NEMMCO for the 2008-09 year.

Ergon Energy 2008/09 Distribution Loss Factors				
Network Level	East Zone		West Zone	
	Code	DLF	Code	DLF
Subtransmission Bus	GESB	1.010	GWSB	1.057
Subtransmission Line	GESL	1.019	GWSL	1.107
22/11 kV Bus	GEHB	1.020	GWHB	1.114
22/11 kV Line	GEHL	1.039	GWHL	1.154
LV Bus	GELB	1.071	GWLB	1.193
LV Line	GELL	1.076	GWLL	1.263

5.3 DLF Rules

- (a) The DLFs in this Tariff Guide do NOT apply to NMIs with site specific distribution loss factors.
- (b) DLFs for all NMIs will be included in the Schedule of Network Tariffs issued to the customer and/or their Retailer.
- (c) The zonal boundaries are identical to those used for the Network Tariffs.

- (d) For SACs, the customer or Retailer must nominate the DLF appropriate to the connection. The customer or Retailer may be required to justify any nominated DLF.
- (e) Where the voltage at the metering point is not listed, or there is doubt about the application of these rules, please request advice from Ergon Energy.

5.4 DLF Categories

- (a) **Subtransmission Bus** – Applicable to connection points that are High Voltage metered at a Subtransmission Bus with a voltage greater than 30kV.
- (b) **Subtransmission Line** – Applicable to connection points that are High Voltage metered at a Subtransmission Line with a voltage greater than 30kV.
- (c) **22/11kV Bus** - Applicable to connection points that are High Voltage metered at a 22/11kV Bus with a voltage less than 30kV and greater than 1,000 volts.
- (d) **22/11kV Line** – Applicable to connection points that are High Voltage metered at a 22/11kV Line with a voltage less than 30kV and greater than 1,000 volts.
- (e) **Low Voltage Bus** - Applicable to connection points that are Low Voltage metered at a Low Voltage Bus with a voltage less than 1,000 volts.
- (f) **Low Voltage Line** – Applicable to connection points that are Low Voltage metered at a Low Voltage Line with a voltage less than 1,000 volts.

5.5 DLF Applications

(a) Subtransmission and 22/11kV Bus

NMIs supplied from a zone substation by dedicated greater than 30kV lines and are metered at or immediately adjacent to the zone substation would be eligible for a Subtransmission Bus DLF.

Zone substations are defined as substations where the voltage level is stepped down from a voltage greater than 30kV.

(b) Subtransmission Line

The Subtransmission Line DLF will apply to all NMIs which are connected to high voltage subtransmission lines (greater than 30kV) and are metered at the same voltage as the line is energised.

If customers believe that the NMI would qualify for a high voltage Bus DLF rather than a high voltage Line DLF they should submit details justifying their claim to Ergon Energy. As an example, NMIs supplied from a zone substation by dedicated 22/11kV lines and are metered at or immediately adjacent to the zone substation would be eligible for a 22/11kV Bus DLF.

(c) 22/11kV Line

The 22/11kV Line DLF will apply to all NMIs which are connected to high voltage distribution lines and are metered at the same voltage as the line is energised.

(d) **LV Bus**

NMIs which are supplied from a distribution substation on their site (owned or leased) and are metered at the low voltage level are eligible for a LV Bus DLF.

(e) **LV Line**

All NMIs not covered by any of the above categories. If customers believe that the NMI would qualify for a LV Bus DLF rather than a LV Line DLF they should submit details justifying their claim to Ergon Energy.

6. TRANSMISSION NODE IDENTIFIERS (TNIs)

The TNI identifies the Transmission Network Connection Point from which a customer is supplied. The NMI Discovery process (Stage 2) will provide Retailers with the TNI applicable to a NMI.

7. SIDE CONSTRAINTS

(a) **DUOS**

It is a requirement of the QCA that a customer's individual annual network distribution charge increase must not exceed CPI plus 5% unless price paths apply (refer below). Where a customer's increase exceeds this amount, Ergon Energy has produced a site-specific or side-constrained tariff.

(b) **TUOS**

A number of customers have side constraints applied to their annual TUOS charge and accordingly, Ergon Energy has produced a site-specific or side-constrained TUOS tariff.

(c) **PRICE PATHS**

For those customers with a network charge less than cost (i.e. receiving side-constrained tariffs) the QCA required that Ergon Energy propose a price path that would move these customers to cost reflective pricing by the end of the next regulatory period (i.e. by the end of the 2014-15 financial year.)

These price paths have resulted in a small number of customers receiving increases above CPI plus 5% for the 2008-09 year.

(d) NMIs for customers with site-specific tariffs are listed in Appendix 2.

8. INDIVIDUALLY CALCULATED CUSTOMERS (ICCs)

8.1 Definition

ICCs are those customers:

- (a) with energy consumption typically greater than 40 GWh per annum; or
- (b) customers with energy consumption lower than 40 GWh per annum where:
 - (i) a customer has a dedicated supply system which is quite different and separate from the remainder of the supply network; or
 - (ii) there are only two or three customers in a supply system making average prices inappropriate; or
 - (iii) a customer is connected at or close to a transmission connection point and the inclusion of the cost of average shared network would increase their network price above stand-alone; or
 - (iv) inequitable treatment of otherwise comparable customers arising from application of the 40 GWh per annum threshold.

8.2 DUOS Tariffs

- (a) DUOS Tariffs are based on:
 - (i) the actual dedicated connection assets utilised by the customer; and;
 - (ii) the customer's specifically identified portion of any shared distribution network utilised for the electricity supply.
- (b) DUOS Tariffs incorporate a Fixed Charge (\$/day), a Capacity Charge (\$/kW of AD/month), an Actual Demand Charge (\$/kW/month) and a Volume Charge (\$/kWh).

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

- (c) DUOS Tariffs for ICCs are site-specific and are available with the customer's written consent.

8.3 TUOS Tariffs

- (a) TUOS charges are calculated and levied by Powerlink for each transmission connection point and are passed through on a reflective basis proportional to the Authorised Demand of the customer and their energy consumption.
- (b) TUOS Tariffs incorporate a Fixed Charge (\$/day), a Capacity Charge (\$/kW of AD/month), a Common Service & General Charge (\$/day) and a Volume Charge (\$/kWh)

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

To determine the total TUOS volume charge, the metered consumption must be multiplied by the customer DLF and then applied to the TUOS \$/kWh rate.

- (c) TUOS Tariffs for ICCs are site-specific and are available with the customer's written consent.

9. CONNECTION ASSET CUSTOMERS (CACs)

9.1 Definition

CACs are those customers:

- (a) with energy consumption typically greater than 4 GWh per annum; or
- (b) with energy consumption lower than 4 GWh per annum where:
 - (i) a customer has a dedicated supply system which is quite different and separate from the remainder of the supply network; or
 - (ii) inequitable treatment of otherwise comparable customers arising from application of the 4 GWh per annum threshold

9.2 DUOS Tariffs

- (a) DUOS Tariffs are based on:
 - (i) the actual dedicated connection assets utilised by the customer; plus
 - (ii) average charges for use of the shared network
- (b) DUOS Tariffs incorporate a Fixed Charge (\$/day), a Capacity Charge (\$/kW of AD/month), an Actual Demand Charge (\$/kW/month) and a Volume Charge (\$/kWh).

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

- (c) DUOS Tariffs for CACs are site-specific and are available with the customer's written consent.

9.3 TUOS Tariffs

- (a) TUOS charges are calculated and levied by Powerlink for each transmission connection point and are passed through on a reflective basis proportional to the Authorised Demand of the customer and their energy consumption.
- (b) TUOS Tariffs incorporate a Fixed Charge (\$/day), a Capacity Charge (\$/kW of AD/month), a Common Service & General Charge (\$/day) and a Volume Charge (\$/kWh)

Where the actual demand exceeds the authorised demand in any one month the actual demand will be substituted for the authorised demand in the calculation of the capacity charge for that month.

To determine the total TUOS volume charge, the metered consumption must be multiplied by the customer DLF and then applied to the TUOS \$/kWh rate.

- (c) TUOS Tariffs for CACs are site-specific and are available with the customer's written consent.

10. EMBEDDED GENERATORS (EGs)

10.1 Definition

EGs can be separated into two categories

- (a) EGs that are connected to and only generate into the distribution system; or
- (b) EGs that are connected to, generate into as well as take load from the distribution system.

10.2 DUOS Tariffs

- (a) For those EGs that generate into the distribution system a Fixed Charge (\$/day) applies; and
- (b) For those EGs that generate into as well as take load from the distribution system a Fixed Charge (\$/day) applies; and
 - (i) DUOS Tariffs for load taken from the distribution system will be allocated as per the appropriate Network Price category selected from ICCs, CACs or SACs.

Tariffs for EGs are site-specific and are available with the customer's written consent.

10.3 TUOS Tariffs

- (a) For those EGs that only generate into the distribution system.
 - (i) TUOS Tariffs do not apply to generated energy.
- (b) For those EGs that generate into as well as take load from the distribution system
 - (i) TUOS Tariffs do not apply to generated energy.
 - (ii) TUOS Tariffs for load taken from the distribution system will be allocated as per the appropriate Network Price category selected from ICCs, CACs or SACs.

TUOS Tariffs for EGs are site-specific and are available with the customer's written consent.

11. STANDARD ASSET CUSTOMERS >100 MWh Per Annum

11.1 Definition

SACs >100 MWh are those customers:

- (a) with energy consumption typically greater than 100 MWh per annum; or
- (b) where the network prices are based on the averages of both the shared distribution network charges and connection charges.

11.2 DUOS Tariffs

- (a) DUOS Tariffs are based on:
 - (i) the average of the connection charges and
 - (ii) the average of the shared distribution network charges.
- (b) DUOS Tariffs incorporate a Fixed Charge (\$/day), an Actual Demand Charge (\$/kW/month) and a Volume Charge (\$/kWh).

The Minimum Chargeable Demand will be applied for each month where the monthly maximum demand fails to exceed this value.

The Minimum Chargeable Demand applicable to each Network Charge Category is:

Network Charge Category	Minimum Chargeable Demand
<i>Demand High Voltage (EDH or WDH)</i>	400 kW
<i>Demand Large (EDL or WDL)</i>	400 kW
<i>Demand Medium (EDM or WDM)</i>	120 kW
<i>Demand Small (EDS or WDS)</i>	30 kW

- (c) The Network Charge category applicable to a customer will be as nominated by the customer or their Retailer from among the following categories:
 - (i) ***Demand High Voltage (EDH or WDH)*** is available to customers who have high voltage metering and take supply at high voltage. This category is **NOT** available to customers with non-standard or significant connection arrangements, who have distribution transformer(s) provided by Ergon Energy, or to customers who are metered at other than high voltage.
 - (ii) ***Demand Large (EDL or WDL), Demand Medium (EDM or WDM) and Demand Small (EDS or WDS)*** are available to all SACs > 100 MWh. The network charge categories are self-selecting with customers' load characteristics determining the optimum category.
- (d) A small number of customers have site specific tariffs as a result of side constraints being applied. Refer section 7. DUOS Tariffs for these customers are site-specific and are available with the customer's written consent.

11.3 TUOS Tariffs

- (a) TUOS charges are calculated and levied by Powerlink for each transmission connection point. Ergon Energy combines rates in geographical regions and passes through TUOS charges to SACs >100 MWh thus providing an appropriate locational signal in each region.

The regional indicator for each TNI is shown in Appendix 1. The indicator aligns with each Network Tariff Code – refer to the suffix of “T”.

- (b) TUOS Tariffs incorporate a Fixed Charge (\$/day), Capacity Charge (\$/kW/month) and Volume Charge (\$/kWh).

The Minimum Chargeable Demand will be applied for each month where the monthly maximum demand fails to exceed this value. Details of the Minimum Chargeable Demand for each Network Charge Category are shown in Section 11.2 (b) above.

To determine the total TUOS volume charge, the metered consumption must be multiplied by the customer DLF and then applied to the TUOS \$/kWh rate for the TNI applicable to the customer.

- (c) A small number of customers have site specific tariffs as a result of side constraints being applied. Refer section 7. TUOS Tariffs for these customers are site-specific and are available with the customer's written consent.

11.5 Mt Isa

Network Tariffs for Mt Isa customers are not explained in this Guide. Customers with metered consumption greater than or equal to 100MWh per annum can contact Ergon Energy for further information.

12. STANDARD ASSET CUSTOMERS < 100 MWh Per Annum – VOLUME LARGE

12.1 Definition

SACs < 100 MWh – Volume Large are those customers:

- (a) with energy consumption in the range of 26 MWh to 100 MWh per annum; and
- (b) where the network charges are based on the averages of both the shared distribution network charges and connection charges for the Network User Group in the particular zone.

12.2 DUOS Tariffs

- (a) DUOS Tariffs are based on:
 - (i) the average of the connection charges and
 - (ii) the average of the shared distribution network charges.
- (b) DUOS Tariffs incorporate a Fixed Charge (\$/day) and a Volume Charge (\$/kWh).

12.3 TUOS Tariffs

- (a) TUOS charges are calculated and levied by Powerlink for each transmission connection point. Ergon Energy combines rates in geographical regions and passes through TUOS charges to SACs < 100 MWh thus providing an appropriate locational signal in each region.

The regional indicator for each TNI is shown in Appendix 1. The indicator aligns with each Network Tariff Code – refer to the suffix of “T”.

- (b) TUOS Tariffs for Volume Large incorporate a Fixed Charge (\$/day) and Volume Charge (\$/kWh).

To determine the total TUOS volume charge, the metered consumption must be multiplied by the customer DLF and then applied to the TUOS \$/kWh rate.

¹ A controlled load pricing option only applies where electricity load is permanently connected to appliances, separately metered and controlled at a supply point.

The network charge categories apply to the controlled supplies of both market and non-market customers. For the suitability of appliances and other conditions associated with controlled supply, reference should be made to the Regulated Electricity Retail Prices for Non-market Customers as reflected in the Queensland Government "Tariff Schedule" (http://www.energy.qld.gov.au/electricity_retail_prices.cfm). The conditions contained in the Regulated Electricity Retail Prices for Non-market Customers will be applied by Ergon Energy to all customers on controlled supply (i.e. both market and non-market customers).

Switching times will be managed at Ergon Energy's absolute discretion, in accordance with Ergon Energy's network requirements.

For non-market customers, Volume Night – Controlled equates to the Retail Tariff 31 and Volume Controlled equates to the Retail Tariff 33 of the Notified Prices as reflected in the Queensland Government Regulated Electricity Retail Prices for Non-market Customers.
