# 1 Introduction

## 1.1 Overview

Ergon Energy Corporation Limited (Ergon Energy) is a Distribution Network Service Provider (DNSP) to around 725,000 customers in regional Queensland. Our service area covers around 97 per cent of Queensland and has approximately 160,000 kilometres of power lines and one million power poles. Around 70 per cent of the network's power lines are radial and service mostly rural areas with very low levels of customers per line kilometre.

As a DNSP, Ergon Energy is subject to economic regulation by the Australian Energy Regulator (AER) under the National Electricity Law (the Law) and the National Electricity Rules (NER). Under the Law and NER, the AER is responsible for regulating the revenues Ergon Energy can earn, and the prices that we can charge for certain services provided by means of, or in connection with, our distribution system.

In order to regulate the prices that Ergon Energy can charge for our services, the AER has classified our regulated distribution services as Direct Control Services and separately classified into Standard and Alternative Control Services.

**Standard Control Services** are core distribution services associated with the access and supply of electricity to customers. They include network services (e.g. construction, maintenance and repair of the network), some connection services (e.g. small customer connections) and Type 7 metering services. Ergon Energy recovers our costs in providing Standard Control Services through network tariffs billed to retailers.

**Alternative Control Services** are comprised of:

- *Fee based services* – regulated distribution activities Ergon Energy undertakes at the request of an identifiable customer, retailer or appropriate third party which are in addition to our Standard Control Services and are levied as a separate charge. These services are priced on a 'fixed fee' basis as the costs of providing the service (and therefore price) can be assessed in advance of the service being requested by a customer or retailer (e.g. de-energisations, re-energisations, and supply abolishment etc.).
- *Quoted services* – similar to fee based services, but they are 'priced on application' as the nature and scope of these services are variable and the costs (and therefore price) are specific to the individual retailer's or customer's needs (e.g. design and construction of connection assets for major customers, real estate development connections, special meter reads etc.).
- *Default Metering Services* – relate to the provision, installation, maintenance, reading and data services of basic electricity meters (Type 5 and 6) for small to medium business and residential customers. These are the meters that measure the electricity that goes into a property, and which allow electricity retailers to bill their customers. Ergon Energy recovers our costs of providing Default Metering Services through charges based on the number and type of meters we provide the customer. A separate upfront charge for new or upgraded meters is also payable.
- *Public Lighting Services* – relate to the provision, construction and maintenance of public lighting assets owned by Ergon Energy, and emerging public lighting technology. Ergon Energy recovers our costs of providing Public Lighting Services through a daily public lighting charge billed to retailers. We also charge a one-off exit fee, which is payable when a public light is scrapped before the end of its useful operational life.<sup>1</sup>

<sup>1</sup> Outside of our light emitting diode (LED) transition program.

## 1.2 Purpose

This Price List sets out Ergon Energy's Alternative Control Services and the prices that apply to fee based services, Default Metering Services and Public Lighting Services. It also sets out prices for some quoted services which are capped by Schedule 8 of the *Electricity Regulation 2006* (refer to Section 2).<sup>2</sup>

Information on Standard Control Services is contained in the *Network Tariff Guide* and the *Information Guide for Standard Control Services Pricing*.

## 1.3 Tariff setting process for Alternative Control Services

Ergon Energy's Alternative Control Services are regulated under a price cap control mechanism. This means the AER determines Ergon Energy's efficient costs, and approves a maximum price that Ergon Energy can charge for a service.

A number of our Alternative Control Services are also further capped through Schedule 8 of the *Electricity Regulation 2006*, which is administered by the Queensland Government Department of Energy and Water Supply.

## 1.4 Supporting network pricing documents

In addition to this Price List, Ergon Energy has a number of network pricing documents to assist customers, retailers and interested parties understand the development and application of tariffs and connection charges. These documents are outlined in Figure 1.1 below and are available on Ergon Energy's website at:

[www.ergon.com.au/networktariffs](http://www.ergon.com.au/networktariffs).

## 1.5 Further information

Customers and retailers who are uncertain about the pricing process for Alternative Control Services or their particular circumstances are encouraged to contact us for assistance:

## 2 Price List

### 2.1 Fee based and quoted services

A listing and description of Ergon Energy's fee based and quoted services, by service type, is provided in Table 2.1.

Examples of potential prices for POA services are included in Ergon Energy's Pricing Proposal which is submitted to the AER each regulatory year. The actual price for a POA service will be determined at the time of enquiry and reflect the actual requirements of the service. Call out fees may also apply.<sup>3</sup>

### Key:

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | These services are subject to an additional layer of price regulation at the jurisdictional level, through Schedule 8 of the <i>Electricity Regulation 2006</i> . Even though the national economic regulator (the AER) has approved a higher price that EECL can charge for this service, the Queensland Government has stipulated a (lower) maximum price EECL is able to charge customers in EECL's supply area for these services.                                   |
|  | These services are subject to an additional layer of price regulation at the jurisdictional level, through Schedule 8 of the <i>Electricity Regulation 2006</i> . Even though the national economic regulator (the AER) has approved a higher price that EECL can charge for this service, the Queensland Government has stipulated that LR / IS customers in EECL's supply area are only able to be charged for these services at the same rate as an UR / SR customer. |

### Note to Customers:

If you have an electricity retailer other than Ergon Energy Queensland, you must contact them before submitting a request for one of the above services. A *Service Order Request*, which contains a Retailer Reference Number, will be raised by the electricity retailer and submitted to Ergon Energy.

If your electricity retailer is Ergon Energy Queensland, you should contact the Ergon Energy National Contact Centre on 13 10 46 to discuss the work.

All new/initial connections, metering changes or service alterations require a registered electrical contractor to complete and submit an Ergon Energy Form A.

## 2.2 Default Metering Services

A listing of Ergon Energy's Default Metering Services and their daily fee per unit is provided in Table 2.2. The daily charge comprises two components –

- Capital – metering asset base recovery. The capital charge applies to customers with existing connections (before 1 July 2015) and new installations (on or after 1 July 2015). It does not apply to meter replacements and additional meters required to accommodate additional tariffs other than controlled load.
- Non-capital – operating expenditure and tax.

**Table 2.2: Regulated metering charges, 2015-16**

| Default Metering Services – regulated metering charges | \$/day/unit<br>GST Exclusive | \$/day/unit<br>GST Inclusive |
|--------------------------------------------------------|------------------------------|------------------------------|
| Primary Service - Non-capital                          | \$0.06691                    | \$0.07360                    |
| Primary Service - Capital                              | \$0.01777                    | \$0.01955                    |
| Controlled load - Non-capital                          | \$0.02461                    | \$0.02707                    |
| Controlled load - Capital                              | \$0.00654                    | \$0.00719                    |
| Solar - Non-capital                                    | \$0.01665                    | \$0.01832                    |
| Solar - Capital                                        | \$0.00441                    | \$0.00485                    |

The upfront charges applying to Type 5 and 6 meter replacements initiated by a customer are provided in Table 2.3. These charges will be billed to retailers and will apply to all meter replacements installed from 1 July 2015.<sup>4</sup>

**Table 2.3: Metering upfront charges for meter replacements, 2015-16**

| Metering upfront charges – meter replacements | Fixed charge<br>(\$/meter)<br>GST Exclusive | Fixed charge<br>(\$/meter)<br>GST Inclusive |
|-----------------------------------------------|---------------------------------------------|---------------------------------------------|
| Single phase                                  | \$401.28                                    | \$441.41                                    |
| Dual element                                  | \$452.25                                    | \$497.48                                    |
| Three phase                                   | \$492.29                                    | \$541.52                                    |

<sup>4</sup> The implementation of upfront metering charges has been deferred until 1 August 2015.

The upfront charges applying to new Type 5 and 6 meter installations are provided in Table 2.4. These charges will be billed to retailers and will apply to all new meters installed from 1 July 2015.<sup>5</sup>

**Table 2.4: Metering upfront charges for new installations, 2015-16**

| Metering upfront charges – new installations                                                                | Fixed charge (\$/meter) | Fixed charge (\$/meter) |
|-------------------------------------------------------------------------------------------------------------|-------------------------|-------------------------|
|                                                                                                             | GST Exclusive           | GST Inclusive           |
| Upfront charge - Single phase - Primary                                                                     | \$389.04                | \$427.95                |
| Upfront charge - Single phase - Primary plus solar                                                          | \$386.01                | \$424.61                |
| Upfront charge - Dual element - Primary plus controlled load                                                | \$435.52                | \$479.07                |
| Upfront charge - Dual element - Primary plus controlled load plus solar                                     | \$432.48                | \$475.73                |
| Upfront charge - Polyphase - Primary                                                                        | \$480.05                | \$528.06                |
| Upfront charge - Polyphase - Primary plus solar                                                             | \$477.02                | \$524.72                |
| Upfront charge - Additional single phase meter for controlled load purposes                                 | \$396.78                | \$436.46                |
| Upfront charge - Additional polyphase meter for controlled load purposes                                    | \$487.79                | \$536.57                |
| Upfront charge - Additional single phase meter to accommodate additional tariffs other than controlled load | \$401.28                | \$441.41                |
| Upfront charge - Additional polyphase meter to accommodate additional tariffs other than controlled load    | \$492.29                | \$541.52                |
| Upfront charge - New single phase meter to accommodate solar installation                                   | \$398.24                | \$438.07                |
| Upfront charge - New polyphase meter to accommodate solar installation                                      | \$489.25                | \$538.18                |

<sup>5</sup> The implementation of upfront metering charges has been deferred until 1 August 2015.

## 2.3 Public Lighting Services

Public Lighting Services prices are based on the type of light and the ownership basis (i.e. Ergon Energy Owned & Operated (EO&O) or Gifted & Ergon Energy Operated (G&EO)). A listing of Ergon Energy's Public Lighting Services and their charges is provided in Table 2.5.

Additionally, Ergon Energy will charge an exit fee when public lighting assets are withdrawn before the end of their normal functional life.<sup>6</sup> These charges are provided in Table 2.6.

**Table 2.5: Daily Public Lighting Services charges, 2015-16**

| Public Lighting Services | Fixed charge<br>(\$/day/light) | Fixed charge<br>(\$/day/light) |
|--------------------------|--------------------------------|--------------------------------|
|                          | GST Exclusive                  | GST Inclusive                  |
| EO&O - Major             | \$1.0252                       | \$1.1277                       |
| EO&O - Minor             | \$0.6108                       | \$0.6719                       |
| G&EO - Major             | \$0.4140                       | \$0.4554                       |
| G&EO - Minor             | \$0.2712                       | \$0.2983                       |

**Table 2.6: Public Lighting Services exit fees, 2015-16**

| Public Lighting Services          | \$/light      | \$/light      |
|-----------------------------------|---------------|---------------|
|                                   | GST Exclusive | GST Inclusive |
| EO&O - Major - Exit Fee per light | \$1,413.91    | \$1,555.30    |
| EO&O - Minor - Exit Fee per light | \$854.45      | \$939.89      |
| G&EO - Major - Exit Fee per light | \$233.96      | \$257.35      |
| G&EO - Minor - Exit Fee per light | \$198.35      | \$218.19      |

|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Alternative Control Service</b>       | A distribution service provided by Ergon Energy that the AER has classified as an Alternative Control Service under the NER. Includes fee based services, quoted services, Public Lighting Services and Default Metering Services.                                                                                                                                                                                                              |
| <b>Australian Energy Regulator (AER)</b> | The AER is an independent statutory authority that is part of the Australian Competition and Consumer Commission. The AER is responsible for the economic regulation of electricity networks in the NEM. It also monitors the wholesale electricity and gas markets and is responsible for compliance with and enforcement of the National Electricity Law and Rules, National Gas Law and Rules, and the National Energy Retail Law and Rules. |
| <b>Connection</b>                        | The physical link to or through a transmission network or distribution network.                                                                                                                                                                                                                                                                                                                                                                 |

|                                        |                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Connection Asset Customer (CAC)</b> | Means a customer classified as a CAC in accordance with the definition in our Pricing Proposal. Typically reflects those customers with required capacity above 1,500 kVA, or with electricity consumption greater than 4 GWh (but less than 40 GWh) per year.                                                                                                                                                             |
| <b>Connection assets</b>               | Those components of a transmission or distribution system which are used to provide connection services. Connection assets are those assets required to connect an electrical installation to the shared network and are all the assets from the connection point back up to and including the network coupling point.                                                                                                     |
| <b>Connection point</b>                | The agreed point of supply established between Network Service Provider(s) and another Registered Participant, Non-Registered Customer or franchise customer.                                                                                                                                                                                                                                                              |
| <b>Customer</b>                        | A person or entity that receives, or wants to receive a supply of electricity for a premises, or any other distribution service from Ergon Energy.                                                                                                                                                                                                                                                                         |
| <b>Dedicated connection assets</b>     | Assets that are dedicated to a network user of any size. In most circumstances these are 'connection assets'. This is because no other party is using the assets and it enables the user to pay for exactly the capacity and style of assets they seek to have. In some cases, dedicated connection assets may later be shared with another customer in which case the network coupling point is moved further downstream. |
| <b>Default Metering Services</b>       | A type of Alternative Control Service. Relates to the installation, provision, maintenance, reading and data services of basic electricity meters (Type 5 and 6) for small to medium business and residential customers. Ergon Energy recovers our costs in providing Default Metering Services through daily metering charges which we bill to retailers and an upfront charge for new or upgraded meters.                |
| <b>Direct Control Service</b>          | Distribution services subject to economic regulation by the AER under the NER. Direct Control Services are further subdivided into Standard Control Services and Alternative Control Services.                                                                                                                                                                                                                             |
| <b>Distribution network</b>            | The electrical system used to transport electricity from the high voltage transmission network connection point to distribution network users.                                                                                                                                                                                                                                                                             |
| <b>Embedded Generator (EG)</b>         | Means a network user classified as an EG in accordance with the definition in our Pricing Proposal. EGs are those network users that export energy into the distribution system, except for micro embedded generators that have been classified as a SAC (such as small scale PV generators).                                                                                                                              |
| <b>Fee based services</b>              | A type of Alternative Control Service which Ergon Energy undertakes at the request of an identifiable customer, retailer or appropriate third party which is in addition to our Standard Control Services and is levied as a separate charge. The costs of providing the service (and therefore price) can be assessed in advance of the service being requested by a customer or retailer.                                |
| <b>Preliminary Determination</b>       | The AER's Preliminary Determination sets the revenue and pricing control regime that Ergon Energy must comply with for the first year of the current regulatory control period (i.e. 2015–16).                                                                                                                                                                                                                             |
| <b>High Voltage (HV)</b>               | Refers to parts of the network that are 11 kV or above.                                                                                                                                                                                                                                                                                                                                                                    |

|                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Individually Calculated Customer (ICC)</b> | Means a customer classified as an ICC in accordance with the definition in our Pricing Proposal. Typically reflects those customers with electricity consumption greater than 40 GWh per year, or where a customer's circumstances and connection arrangement mean that average prices are meaningless or inappropriate (e.g. only two or three customers in a supply system, or the customer is connected close to a Transmission Connection Point).    |
| <b>kW</b>                                     | 1,000 Watts which is a measure of the real component of power being consumed by the consumer's load.                                                                                                                                                                                                                                                                                                                                                     |
| <b>Low Voltage (LV)</b>                       | Refers to the sub 11 kV network.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Major customer</b>                         | Are Individually Calculated Customers (ICCs), Connection Asset Customers (CACs) or Embedded Generators (EGs).                                                                                                                                                                                                                                                                                                                                            |
| <b>Major Customer Connection arrangements</b> | Refers to the arrangements applying from 1 July 2010, where new or augmented connection assets are paid for or contributed by the major customer (i.e. not included in the network tariff).                                                                                                                                                                                                                                                              |
| <b>Major Customer Connection service</b>      | Is a type of quoted price service which relates to the design and construction of connection assets for major customers.                                                                                                                                                                                                                                                                                                                                 |
| <b>National Electricity Market (NEM)</b>      | The interconnected electricity grid covering Queensland, New South Wales, Victoria, Tasmania, South Australia and the Australian Capital Territory.                                                                                                                                                                                                                                                                                                      |
| <b>National Electricity Rules (NER)</b>       | Rules made under the National Electricity Law which govern the operation of the NEM.                                                                                                                                                                                                                                                                                                                                                                     |
| <b>National Metering Identifier (NMI)</b>     | A unique number assigned to each metering installation.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Network capacity</b>                       | The maximum demand (kW) that the distribution network can provide for at any one time.                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Network coupling point</b>                 | The point at which connection assets join a distribution network, used to identify the distribution service price payable by a connection customer.                                                                                                                                                                                                                                                                                                      |
| <b>Network user</b>                           | There are four network user groups included in Ergon Energy's network tariff structures – Individually Calculated Customers (ICCs), Connection Asset Customers (CACs), Standard Asset Customers (SACs) and Embedded Generators (EGs). For the purposes of our network pricing documents, the term 'network user' refers to both a 'customer' and an 'EG'.                                                                                                |
| <b>Premises</b>                               | Means premises owned or occupied by the customer.                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Public Lighting Services</b>               | A type of Alternative Control Service. Relates to the provision, construction and maintenance of public lighting assets owned by Ergon Energy, and emerging public lighting technology. Ergon Energy recovers our costs in providing this service through a daily public lighting charge which we bill to retailers. We will also charge an exit fee, when public lights are scrapped before the end of their useful lives (outside of the LED program). |
| <b>Public lights – Major</b>                  | Standard major public lights are 100, 150, 250 and 400 watt High Pressure Sodium vapour lights and include any other non-standard or obsolete public lights that would be replaced with any of the above lights.                                                                                                                                                                                                                                         |

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Public lights – Minor</b>         | Standard minor public lights are 50, 80 and 125 watt Mercury Vapour and some 70 and 100 watt High Pressure Sodium vapour lights (special locations only) and include any other non-standard or obsolete public lights that would be replaced with any of the above lights.                                                                                                                            |
| <b>Quoted services</b>               | A type of Alternative Control Service. Similar to fee based services, but they are priced on application as the nature and scope of these services is variable and the cost (and therefore price) is specific to the individual retailer's or customer's needs.                                                                                                                                       |
| <b>Regulatory year</b>               | Is a specific financial year within a regulatory control period.                                                                                                                                                                                                                                                                                                                                      |
| <b>Residential customer</b>          | Means a customer who acquires electricity for domestic use (as defined in the Queensland Electricity Distribution Network Code).                                                                                                                                                                                                                                                                      |
| <b>Standard Asset Customer (SAC)</b> | Means a customer classified as a SAC in accordance with the definition in our Pricing Proposal. Typically reflects those customers with annual electricity consumption below 4 GWh per year. Includes customers with micro generation facilities (such as small scale PV generators) that have an exporting capability and an inverter capacity as per AS4777.                                        |
| <b>Standard Control Service</b>      | A distribution service provided by Ergon Energy that the AER has classified as a Standard Control Service under the NER. Includes network services, some connection services (including small customer connections) and Type 7 metering services. Ergon Energy recovers our costs in providing Standard Control Services through the DUOS component of network tariffs which are billed to retailers. |
| <b>Tariff class</b>                  | A class of customers for one or more Direct Control Services who are subject to a particular tariff or particular tariffs (as defined in the NER).                                                                                                                                                                                                                                                    |
| <b>Unmetered</b>                     | A customer who takes supply where no meter is installed at the connection point.                                                                                                                                                                                                                                                                                                                      |
