1 Introduction

1.1 Overview

Ergon Energy Corporation Limited (Ergon Energy) is a Distribution Network Service Provider (DNSP) to around 730,000 customers in regional Queensland. Our service area covers around 97 per cent of Queensland and has approximately 160,000 kilometres of power lines and one million power poles. Around 70 per cent of the network's power lines are radial and service mostly rural areas with very low levels of customers per line kilometre.

Ergon Energy provides a number of different services. The Australian Energy Regulator (AER) decides how these services are classified and how they are regulated in its Distribution Determination. This is important as it determines how prices are set and how charges are recovered from our customers.

For the 2015 to 2020 period, many of our services are classified as Direct Control Services. These services are subject to direct regulatory oversight by the AER, through price or revenue setting. Direct Control Services are further classified into Standard Control Services and Alternative Control Services.

Standard Control Services are core distribution services associated with the access and supply of electricity to customers. They include network services (e.g. construction, maintenance and repair of the network), some connection services (e.g. small customer connections) and Type 7 metering services. Ergon Energy recovers our costs in providing Standard Control Services through network tariffs billed to retailers.

Alternative Control Services are comprised of:

- *Fee based services* – one-off distribution services that Ergon Energy undertakes at the request of an identifiable customer, retailer or appropriate third party which are levied as a separate charge, in addition to our Standard Control Services. These services are priced on a 'fixed fee' basis as the costs of providing the service (and therefore price) can be assessed in advance of the service being requested.

Examples of fee based services include Type 5 and 6 meter installation and provision (on or after 1 July 2015) during business hours,¹ de-energisations, re-energisations and supply abolishment.

- *Quoted services* – similar to fee based services, but they are 'priced on application' as the nature and scope of these services are variable and the costs (and therefore price) are specific to the individual requestor's needs (e.g. design and construction of connection assets for major customers, real estate development connections and special meter reads etc.).
- *Default Metering Services* – relate to:
 - Type 5 and 6 meter installation and provision (before 1 July 2015)
 - Type 5 and 6 meter installation and provision (on or after 1 July 2015), where the replacement meter is initiated by Ergon Energy as a DNSP
 - Type 5 and 6 metering maintenance, reading and data services.

Ergon Energy recovers our costs of providing Default Metering Services through daily capital and non-capital charges based on the number and type of meters we provide the customer. These charges are billed to retailers.

¹ Where the new or upgraded meter is required as a result of a customer request.

- *Public Lighting Services* – relate to the provision, construction and maintenance of public lighting assets owned by Ergon Energy, and emerging public lighting technology. Ergon Energy recovers our costs of providing Public Lighting Services through a daily public lighting charge billed to retailers. We also charge a one-off exit fee, when a customer requests the replacement of an existing public light for a light emitting diode (LED) luminaire before the end of its useful operational life.²

We also pass on transmission-related costs and jurisdictional scheme amounts to customers.

1.2 Purpose

This Price List sets out Ergon Energy's Alternative Control Services and the prices that apply to fee based services, Default Metering Services and Public Lighting Services. It also sets out prices for some quoted services which are capped by Schedule 8 of the *Electricity Regulation 2006*.³

1.3 Supporting network pricing documents

In addition to this Price List, Ergon Energy has a number of network pricing documents to assist network users, retailers and interested parties understand the development and application of network tariffs, Alternative Control Services prices and connection charges. These documents are outlined in Figure 1 below and are available on Ergon Energy's website at:

<https://www.ergon.com.au/network/network-management/network-pricing>.

² Outside of our LED transition program.

³ Prices for most quoted services are available from Ergon Energy on a 'Price on Application' (POA) basis and are not contained in this Price List.

Figure 1: Supporting network pricing documentation

2 Pricing arrangements

2.1 Establishing tariffs for Alternative Control Services

Ergon Energy's Alternative Control Services are regulated under a price cap control mechanism. This means the AER determines Ergon Energy's efficient costs and approves a maximum price (or schedule of rates) that Ergon Energy can charge for a service.

Appendix G of our Tariff Structure Statement (TSS) sets out the process we undertake each year to establish our prices for Alternative Control Services. The approach to setting tariffs varies for each type of Alternative Control Service:

- For our fee based services, we calculate a cost build-up price using the quoted services formula and a capped price using the fee based ancillary network services formula set out in the Distribution Determination. The prices for each fee based service are the lower of these two amounts.
- For our quoted services, we use the quoted services formula to develop the price to apply, taking into account the actual requirements of the job being requested. These services are generally shown as 'POA' in the Price List.
- For our Default Metering Services and Public Lighting Services, we apply the relevant price cap formulae specified in the Distribution Determination. The exception to this is the public lighting exit fees, which are escalated by inflation only.

2.1.1 Electricity Regulation 2006

Schedule 8 of the *Electricity Regulation 2006* sets further price caps on a number of Ergon Energy's fee based and quoted services.⁴ As the maximum fees in Schedule 8 are imposed through legislation, they take precedence over the maximum prices otherwise approved for these services by the AER.

In practice, Schedule 8 requires Ergon Energy to:

- set lower fixed prices for some fee based services, because of fees explicitly set out for the service in Schedule 8
- cap prices on remaining fee based services by charging customers on long rural or isolated feeders the same fixed price as that applying to customers on urban and short rural feeders
- set fixed prices for some quoted services, because of fees explicitly set out for the service in Schedule 8.

The application of these lower prices means Ergon Energy incurs a revenue shortfall in providing some Alternative Control Services. This revenue shortfall cannot be recovered from other customers or via other charges.

The services impacted by Schedule 8 are identified in Section 3.

2.1.2 Call out fees

Call out fees apply when Ergon Energy attends a premises and is unable to complete the work due to customer or retailer fault (e.g. a dangerous dog or a locked gate).

⁴ The Department of Energy and Water Supply is responsible for the *Electricity Regulation 2006*.

The call out fees for fee based services and Default Metering Services are set out in Table 3.1 and Table 3.2, respectively. For quoted services, Ergon Energy will charge the actual costs incurred.⁵

Consistent with the Schedule 8 requirements, we have capped call out fees for some fee based services and quoted services. This means:

- for fee based services where the call out fee approved by the AER is more than the Schedule 8 price of the associated service, we have applied the Schedule 8 price
- for quoted services impacted by Schedule 8, we have applied the Schedule 8 price of the associated service. The exception is re-energisations after hours. Ergon Energy has calculated a specific call out fee which is less than the Schedule 8 price of the associated service. This is to ensure we do not over-recover our costs.

2.2 Assigning and reassigning customers to tariffs and tariff classes

Appendix I of our TSS provides information on how customers are assigned or reassigned to tariffs and tariff classes for Alternative Control Services, and the process retailers should follow if they do not agree with an assignment or reassignment decision made by Ergon Energy.

2.3 Metering and public lighting services

Ergon Energy provides a number of different services in relation to metering and public lighting. The way we recover costs associated with providing these services varies, consistent with the AER's Distribution Determination. To assist stakeholders, we have summarised these pricing arrangements in Appendix 1 (metering) and Appendix 2 (public lighting).

This Price List only contains prices for metering and public lighting services that are classified as an Alternative Control Service.

⁵ The Product Code "GENCF" will apply to call out fees associated with POA services. Costs are calculated in accordance with the quoted services formula.

3 Price List

A listing and description of each of our Alternative Control Services and call out fees⁶ is provided in the following tables.

Table 3.1: Fee based and quoted services prices

Ref	Service	Service description	Product Codes				Price		B2B Retailer only	Form "A" Required
			Urban	Short rural	Long rural	Isolated	GST Excl	GST Incl	Customer	
Pre-Connection Services										
1	Application fee - Basic or standard connection	Services associated with assessing an application requesting a connection to be made (or altered) between Ergon Energy's network and the customer's installation, and the preparation of a compliant basic or standard connection offer. Applies to small customers classified as a Standard Asset Customer (SAC), as per Ergon Energy's pricing proposal.	APFSAC				\$870.10	\$957.11	Customer	No
2	Application fee - Basic or standard connection - Micro-embedded generators	Services associated with assessing a micro-embedded generator application requesting a connection to be made (or altered) between Ergon Energy's network and the customer's installation, and the preparation of a compliant basic or standard connection offer. Applies to micro-embedded generators only (a subset of Standard Asset Customers, as per Ergon Energy's pricing proposal). No technical assessment required.	APFMEG				\$47.60	\$52.36	Customer	No
3	Application fee - Basic or standard connection - Micro-embedded generators - Technical assessment required	Services associated with assessing a micro-embedded generator application requesting a connection to be made (or altered) between Ergon Energy's network and the customer's installation, and the preparation of a compliant basic or standard connection offer. Applies to micro-embedded generators only (a subset of Standard Asset Customers, as per Ergon Energy's pricing proposal), where a technical assessment is required to be undertaken by Ergon Energy.	APFMTA				\$216.10	\$237.71	Customer	No

⁶ Excluding call out fees for quoted services not impacted by Schedule 8 of the *Electricity Regulation 2006*.

3 Price List

Ref	Service	Service description	Product Codes				Price		B2B Retailer only	Form "A" Required
			Urban	Short rural	Long rural	Isolated	GST Excl	GST Incl	Customer	
4	Application fee - Real estate development connection	Services associated with assessing an application requesting a connection to be made between Ergon Energy's network and a real estate developer's installation, and the preparation of a compliant connection offer. Includes works carried out by contractors and/or Ergon Energy.	APFRED				\$911.00	\$1,002.10	Customer	No
5	Protection and Power Quality assessment prior to connection	Evaluation of application protection design for completeness against engineering connection standard. Study of Power Quality issues including Flicker, Harmonics and DC voltage injection.	PPQA				\$1,348.40	\$1,483.24	Customer	No
40	Application fee - Negotiated connection	Services associated with assessing an application requesting a connection to be made (or altered) between Ergon Energy's network and the customer's installation, and the costs associated with negotiating and preparing a negotiated connection offer. Applies to small customers classified as a Standard Asset Customer (SAC), as per Ergon Energy's pricing proposal, with the exception of micro-embedded generators.	As Quoted				POA		Customer	No
41	Application fee - Negotiated connection - Micro-embedded generators	Services associated with assessing a micro-embedded generator application requesting a connection to be made (or altered) between Ergon Energy's network and the customer's installation, and the costs associated with negotiating and preparing a negotiated connection offer. Applies to micro-embedded generators only (a subset of SAC, as per Ergon Energy's pricing proposal).	As Quoted				POA		Customer	No
42	Application fee - Negotiated - Major customer connection	Services associated with assessing a major customer connection application requesting a connection to be made (or altered) between Ergon Energy's network and the customer's installation, and the costs associated with negotiating and preparing a compliant negotiated connection offer. Applies to major customers classified as an Individually Calculated Customer (ICC), Connection Asset Customer (CAC) or Embedded Generator (EG), as per Ergon Energy's pricing proposal.	As Quoted				POA		Customer	No

3 Price List

Ref	Service	Service description	Product Codes				Price		B2B Retailer only	Form "A" Required
			Urban	Short rural	Long rural	Isolated	GST Excl	GST Incl	Customer	
43	Carrying out planning studies and analysis relating to connection applications	Services associated with carrying out additional planning studies and analysis on the distribution system which are reasonably required to assess a small customer or real estate development connection application. Excludes planning studies and analysis that would otherwise be required for distributor purposes or for the efficient management of the shared network. Applies to small customers classified as a Standard Asset Customer, as per Ergon Energy's pricing proposal (including micro-embedded generators), and real estate developers.	As Quoted				POA		Customer	No
44	Feasibility and concept scoping, including planning and design, for major customer connections	Detailed design and advice for major customer connections for the selected (preferred) connection option. This includes shared network planning and design works incurred during the feasibility and concept scoping phases (i.e. before the connection offer has been accepted) (where applicable).	As Quoted				POA		Customer	No
45	Tender process	Applies where Ergon Energy conducts a tender process on behalf of a connection applicant to procure connection services that can be provided by a third party, or where the connection applicant conducts a tender process and requires assistance from Ergon Energy	As Quoted				POA		Customer	No
46	Pre-connection site inspection	Site inspection in order to determine nature of connection being sought	As Quoted				POA		Customer	No

3 Price List

Ref	Service	Service description	Product Codes				Price		B2B Retailer only	Form "A" Required
			Urban	Short rural	Long rural	Isolated	GST Excl	GST Incl	Customer	
47	Provision of site-specific connection information and advice	Provision of site-specific connection advice, data and/or information on request (during the connection enquiry and/or connection application stage only). For example: - advice on project feasibility - advice on whether augmentation would likely be required - capacity information, including specific network capacity - load profiles for load flow studies - requests to review reports and designs prepared by external consultants, prior to lodgement of connection application - additional or more detailed specification and design options. Excludes information provided in planning reports/studies and project scopes.	As Quoted				POA		Customer	No
48	Preparation of preliminary designs and planning reports for major customer connections, including project scopes and estimates	Initial specification and design outline for major customer connections. Includes general evaluation and advice on asset ownership options, indicative estimates of viable connection options, and recommendation on the most suitable option.	As Quoted				POA		Customer	No
49	Customer build, own and operate consultation services	Provision of advice, design and specification on request to an applicant considering a build-own-operate asset ownership option for connection assets.	As Quoted				POA		Customer	No
50	Detailed enquiry response fee - embedded generation	Costs associated with preparing a detailed enquiry response pursuant to Chapter 5 of the NER. Applies to any embedded generation connection applicant that submits an enquiry under the connection process set out in Chapter 5 of the NER and seeks a detailed enquiry response.	As Quoted				POA		Customer	No
Connection Services										
6	Temporary connection, not in permanent position - single phase metered - urban/short rural feeders	Connection of a single phase supply to a meter location that is not permanent (i.e. short term supply)	TBSSPU	TBSSPS			\$398.80	\$438.68	B2B Retailer only	Yes

3 Price List

Ref	Service	Service description	Product Codes				Price		B2B Retailer only	Form "A" Required
			Urban	Short rural	Long rural	Isolated	GST Excl	GST Incl	Customer	
6-CF	Call out fee for temporary connection, not in permanent position - single phase metered - urban/short rural feeders	Travel time to perform a fee based service requested by a retailer or customer, and the service is unable to be performed due to customer/retailer fault. Connection of a single phase supply to a meter location that is not permanent (i.e. short term supply)	CFTBSSPU	CFTBSSPS			\$114.50	\$125.95	B2B Retailer only	N/A
7	Temporary connection, not in permanent position - single phase metered - long rural/isolated feeders	Connection of a single phase supply to a meter location that is not permanent (i.e. short term supply)			TBSSPL	TBSSPI	\$398.80	\$438.68	B2B Retailer only	Yes
7-CF	Call out fee for temporary connection, not in permanent position - single phase metered - long rural/isolated feeders	Travel time to perform a fee based service requested by a retailer or customer, and the service is unable to be performed due to customer/retailer fault. Connection of a single phase supply to a meter location that is not permanent (i.e. short term supply)			CFTBSSPL	CFTBSSPI	\$398.80	\$438.68	B2B Retailer only	N/A
8	Temporary connection, not in permanent position - multi phase metered - urban/short rural feeders	Connection of a multi phase supply to a meter location that is not permanent (i.e. short term supply)	TBSMPU	TBSMPS			\$398.80	\$438.68	B2B Retailer only	Yes
8-CF	Call out fee for temporary connection, not in permanent position - multi-phase metered - urban/short rural feeders	Travel time to perform a fee based service requested by a retailer or customer, and the service is unable to be performed due to customer/retailer fault. Connection of a multi-phase supply to a meter location that is not permanent (i.e. short term supply)	CFTBSMPU	CFTBSMPS			\$114.50	\$125.95	B2B Retailer only	N/A
9	Temporary connection, not in permanent position - multi phase metered - long rural/isolated feeders	Connection of a multi phase supply to a meter location that is not permanent (i.e. short term supply)			TBSMPL	TBSMPI	\$398.80	\$438.68	B2B Retailer only	Yes
9-CF	Call out fee for temporary connection, not in permanent position - multi-phase metered - long rural/isolated feeders	Travel time to perform a fee based service requested by a retailer or customer, and the service is unable to be performed due to customer/retailer fault. Connection of a multi-phase supply to a meter location that is not permanent (i.e. short term supply)			CFTBSMPL	CFTBSMPI	\$398.80	\$438.68	B2B Retailer only	N/A
51	Design and construction of connection assets for major customers	Detailed design work and construction of connection assets after a connection offer has been made. Applies to major customers classified as an Individually Calculated Customer (ICC), Connection Asset Customer (CAC) or Embedded Generator (EG) as per Ergon Energy's pricing proposal.	As Quoted				POA		Customer	No

Ref	Service	Service description	Product Codes				Price		B2B Retailer only	Form "A" Required
			Urban	Short rural	Long rural	Isolated	GST Excl	GST Incl	Customer	
52	Commissioning and energisation of major customer connections	Includes: - inspection and testing of connection assets prior to physical connection to the network - physical connection and energisation of electricity equipment to allow conveyance of electricity - administration services involved in reconciling the financials of a connection project, and processing and finalising network information and contracts in relation to a connection - generation required (if any) to supply existing customers while equipment is de-energised to allow testing and commissioning Applies to major customers classified as an Individually Calculated Customer (ICC), Connection Asset Customer (CAC) or Embedded Generator (EG) as per Ergon Energy's pricing proposal.	As Quoted				POA		Customer	Yes
53	Design and construction for real estate developments	Detailed design work and construction for a real estate development connection after a connection offer has been made. Includes work associated with augmentation to the shared network which is directly attributable to the establishment or alteration of the real estate development connection	As Quoted				POA		Customer	No
54	Commissioning and energisation of real estate development connections	Includes: - inspection and testing prior to physical connection to the network - physical connection and energisation of electricity equipment to allow conveyance of electricity - administration services involved in reconciling the financials of a connection project, and processing and finalising network information and contracts in relation to a connection - generation required (if any) to supply existing customers while equipment is de-energised to allow testing and commissioning	As Quoted				POA		Customer	Yes
55	Removal of network constraint for embedded generator	Augmenting the network to remove a constraint faced by an embedded generator	As Quoted				POA		Customer	No

Post Connection Services										
10	Supply abolishment during business hours - urban/short rural feeders	Decommissioning of a NMI and associated metering. May be used where a property is to be demolished; supply is no longer required; an alternative connection point is to be used; or a redundant supply is to be removed	SUPABOLU	SUPABOLS			\$343.70	\$378.07	B2B Retailer only	No
10-CF	Call out fee for supply abolishment during business hours - urban/short rural feeders	Travel time to perform a fee based service requested by a retailer or customer, and the service is unable to be performed due to customer/retailer fault. Decommissioning of a NMI and associated metering. May be used where a property is to be demolished; supply is no longer required; an alternative connection point is to be used; or a redundant supply is to be removed	CFSUPABOLU	CFSUPABOLS			\$114.50	\$125.95	B2B Retailer only	N/A
11	Supply abolishment during business hours - long rural/isolated feeders	Decommissioning of a NMI and associated metering. May be used where a property is to be demolished; supply is no longer required; an alternative connection point is to be used; or a redundant supply is to be removed			SUPABOLL	SUPABOLI	\$343.70	\$378.07	B2B Retailer only	No
11-CF	Call out fee for supply abolishment during business hours - long rural/isolated feeders	Travel time to perform a fee based service requested by a retailer or customer, and the service is unable to be performed due to customer/retailer fault. Decommissioning of a NMI and associated metering. May be used where a property is to be demolished; supply is no longer required; an alternative connection point is to be used; or a redundant supply is to be removed			CFSUPABOLL	CFSUPABOLI	\$114.50	\$125.95	B2B Retailer only	N/A
12	De-energisation during business hours - urban/short rural feeders	Retailer requests de-energisation of the customer's premises during business hours: - where the de-energisation can be performed (e.g. pole, pillar or meter) - Main switch sticker	DEENBHU	DEENBHS			\$0.00	\$0.00	B2B Retailer only	No
12-CF	Call out fee for de-energisation during business hours - urban/short rural feeders	Travel time to perform a fee based service requested by a retailer or customer, and the service is unable to be performed due to customer/retailer fault. Retailer requests de-energisation of the customer's premises during business hours: - where the de-energisation can be performed (e.g. pole, pillar or meter) - Main switch sticker	CFDEENBHU	CFDEENBHS			\$0.00	\$0.00	B2B Retailer only	N/A

Public Lighting Services										
98	Removal/rearrangement of public lighting assets	Relocation, rearrangement and removal of existing public light assets and energy efficient retrofit	As Quoted				POA		Customer	Yes

Key:

These services are subject to an additional layer of price regulation at the jurisdictional level, through Schedule 8 of the *Electricity Regulation 2006*. Even though the national economic regulator (the AER) has approved a higher price that EECL can charge for this service, the Queensland Government has stipulated a (lower) maximum price EECL is able to charge customers in EECL's supply area for these services.

These services are subject to an additional layer of price regulation at the jurisdictional level, through Schedule 8 of the *Electricity Regulation 2006*. Even though the national economic regulator (the AER) has approved a higher price that EECL can charge for this service, the Queensland Government has stipulated that long rural / isolated customers in EECL's supply area are only able to be charged for these services at the same rate as an urban / short rural customer.

Note to customers:

Where a service has been identified as 'Retailer' requested on the above Price List, you should contact your electricity retailer to arrange the service. Your retailer will raise and submit a *B2B Service Order Request* to Ergon Energy Network. **If your electricity retailer is *Ergon Energy Queensland (Retail)*, you should contact their National Contact Centre on 13 10 46.**

For all other services, including those identified as 'Customer' requested, you should contact the ***Ergon Energy Network Contact Service Centre on 13 74 66*** to discuss the work.

Public Lighting Services										
130	EO&O - Major	A daily charge (per light) that recovers costs related to the provision, construction and maintenance of public lighting assets (including emerging public lighting technology) owned and operated by Ergon Energy. Major public lights only.	ACSEOOMA				\$1.0896	\$1.1986		
131	EO&O - Minor	A daily charge (per light) that recovers costs related to the provision, construction and maintenance of public lighting assets (including emerging public lighting technology) owned and operated by Ergon Energy. Minor public lights only.	ACSEOOMI				\$0.6492	\$0.7141		
132	G&EO - Major	A daily charge (per light) that recovers costs related to the maintenance of public lighting assets (including emerging public lighting technology) gifted to Ergon Energy and thereafter maintained and operated by Ergon Energy. Major public lights only.	ACSGEOMA				\$0.4400	\$0.4840		
133	G&EO - Minor	A daily charge (per light) that recovers costs related to the maintenance of public lighting assets (including emerging public lighting technology) gifted to Ergon Energy and thereafter maintained and operated by Ergon Energy. Minor public lights only.	ACSGEOMI				\$0.2882	\$0.3171		
134	EO&O - Major - Exit Fee	Exit fee payable (per light) when a customer requests a public light owned and operated by Ergon Energy to be scrapped before the end of its useful operational life. Major public lights only.	EOOMAEXT				\$1,438	\$1,582		
135	EO&O - Minor - Exit Fee	Exit fee payable (per light) when a customer requests a public light owned and operated by Ergon Energy to be scrapped before the end of its useful operational life. Minor public lights only.	EOOMIEXT				\$869	\$956		
136	G&EO - Major - Exit Fee	Exit fee payable (per light) when a customer requests a public light gifted to and operated by Ergon Energy to be scrapped before the end of its useful operational life. Major public lights only.	GEOMAEXT				\$238	\$262

137	G&EO - Minor - Exit Fee	Exit fee payable (per light) when a customer requests a public light gifted to and operated by Ergon Energy to be scrapped before the end of its useful operational life. Minor public lights only.	GEOMIEXT				\$202	\$222		

Appendix 1: Metering services

Ergon Energy provides a range of metering services. This appendix outlines the service classification applying to each service grouping and how we recover the associated costs from customers.

Standard Control Services

Type 7 metering services apply where the metering installation does not require a meter under the NER (e.g. street, traffic, park and community lighting meters). Other metering related services associated with the provision of network services to our customers are also classified as Standard Control Services. This includes services related to load control and meter data management.

The costs associated with Standard Control Services are recovered from customers through network tariffs billed to retailers. Our *Information Guide for Standard Control Services Pricing* provides further information on how the revenue requirements associated with Standard Control Services are passed on to customers.

Alternative Control Services

Ergon Energy provides three types of Alternative Control Services in relation to metering services:

- Auxiliary Metering Services
- Upfront metering charges
- Default Metering Services.

Auxiliary Metering Services

Auxiliary Metering Services are non-routine metering services that Ergon Energy provides on request (e.g. special meter reads). They are priced on a quoted basis. This means the costs to Ergon Energy in undertaking this work are recovered through separate charges levied on those who utilise the particular service. Tariffs for this service group are calculated on a POA basis, with the exception of services impacted by Schedule 8 of the *Electricity Regulation 2006*. Refer to Table 3.1.

Call out fees may also apply.

Upfront metering charges

Upfront metering charges apply when a customer requests a new or replacement Type 5 or 6 meter (on or after 1 July 2015). These charges are billed to retailers.

Call out fees may also apply.

Meter replacements

Ergon Energy has eight tariffs for meter replacements, which are differentiated by:

- the type of meter (i.e. single phase, dual element, polyphase or current transformer)
- the type of feeder the customer is connected to (i.e. either urban/short rural or long rural/isolated).

The upfront charges applying to Type 5 and 6 meter replacements initiated by a customer are classified as a fee based service and are provided in Table 3.1.

New meter installations

Due to system limitations, Ergon Energy has decided to implement a transitional solution for upfront meter charges associated with the installation of new meters in 2016-17. This transitional solution is similar to the one that applied in 2015-16.

Under this transitional solution, new installations in 2016-17 will generally incur an upfront metering charge, plus a daily capital charge for a period of one year from the date of installation. To achieve a cost neutral outcome for the customer, we have discounted the relevant AER-approved upfront metering charge by one years' worth of the relevant capital charge(s).

We have developed 17 tariffs, which are distinguished by:

- the type of meter (i.e. single phase, dual element, polyphase or current transformer),
- the type of metering service (i.e. primary, controlled load and embedded generation),
- whether the meter is an additional meter at the customer's premises, and/or
- whether the new meter is required to accommodate additional tariffs other than controlled load or an embedded generation installation.

The upfront charges applying to new Type 5 and 6 meter installations are classified as a fee based service and are provided in Table 3.1.

After hours installation

The installation and provision of a new or replacement Type 5 or 6 meter after hours is classified as a quoted service. Charges for this service are calculated on a POA basis. Refer to Table 3.1.

Default Metering Services

Ergon Energy has six metering service charges, which are distinguished by:

- the type of metering service
 - primary
 - controlled load
 - embedded generation
- the type of cost recovery
 - capital⁷
 - non-capital.⁸

The metering service charges that apply to customers will differ, depending on the customer's circumstances. Figure 2 illustrates, at a high level, when each charge will apply.

For billing purposes, the annual charges approved by the AER as part of the Pricing Proposal are converted into daily charges.

The costs of wasted attendance associated with final meter reads⁹ are recovered via a call out fee. There are two call out fees, which are differentiated by the type of feeder the customer is connected to (i.e. urban/short rural or long rural/isolated).

Each of these charges is set out in Table 3.2.

⁷ Metering asset base recovery and tax.

⁸ Operating expenditure.

⁹ Final meter reads form part of the cost build-up of the non-capital charges.

Note: Where a Type 5 or 6 meter installed before 30 June 2015 is removed on or after 1 July 2015 (including for meter replacements), the regulated annual capital charge will apply. This is to ensure Ergon Energy is able to recover our capital costs in providing the pre 30 June 2015 meter.

Figure 2: Application of regulated annual charges

Unregulated metering services

Type 1 to 4 meters record detailed energy usage and have a number of other capabilities, the most significant being remote communications facilities. These meters are not regulated by the AER. This means the business providing the service determines the associated costs and passes these costs directly on to the customer.

Appendix 2: Public lighting services

Ergon Energy provides both Standard Control Services and Alternative Control Services in connection with public lighting.

Standard Control Services

As is the case with any electrical installation connected to Ergon Energy's distribution system, charges will apply for the use of the shared network to convey electricity to a public light installation. The costs to Ergon Energy in providing Standard Control Services are recovered through network tariffs billed to retailers. Further information is available in the *Network Tariff Guide*.

Alternative Control Services

Ergon Energy provides two main types of Alternative Control Services in connection with public lighting infrastructure:

- provision, construction and maintenance of public lighting assets, and emerging public lighting technology ('Public Lighting Services')
- removal/rearrangement of existing public lighting assets.

Other charges may also apply; depending on the service being requested by the public lighting customer (refer to Table 3.1).

Public Lighting Services

The costs of providing Public Lighting Services are recovered through a daily public lighting charge, which Ergon Energy bills retailers. These charges are based on the type of light (i.e. Major or Minor) and the ownership status (i.e. Ergon Energy Owned & Operated (EO&O) or Gifted & Ergon Energy Operated (G&EO)).

Additionally, Ergon Energy will charge a one-off exit fee when a customer requests the replacement of an existing public light for a LED luminaire before the end of its useful operational life.¹⁰ These fees are also distinguished by the type of light and ownership status.

A listing of Ergon Energy's daily public lighting charges and exit fees are provided in Table 3.3.

If Ergon Energy is requested by a customer to construct non-standard public lighting, Ergon Energy may require the customer to pay an additional upfront amount towards the cost of the public lighting asset. Appendix G of the TSS sets out how this amount is calculated.

Removal/rearrangement of existing public lighting assets

The removal/rearrangement of existing public lighting assets is a quoted service. This means the costs to Ergon Energy in undertaking this work are not recovered through the daily public lighting charge, but are instead recovered through separate charges levied on those who utilise the service. Tariffs for this service are calculated on a POA basis. Refer to Table 3.1. Call out fees may also apply.

¹⁰ Outside of the LED program.

Glossary

Abbreviations

AER	Australian Energy Regulator
AS	Australian Standard
CAC	Connection Asset Customer
DNSP	Distribution Network Service Provider
EG	Embedded Generator
EO&O	Ergon Energy Owned & Operated
Ergon Energy, EECL	Ergon Energy Corporation Limited
G&EO	Gifted & Ergon Energy Operated
GWh	Gigawatt hour
HV	High Voltage
ICC	Individually Calculated Customer
kV	Kilovolt
kW	Kilowatt
Law	National Electricity Law
LED	Light emitting diode
LV	Low Voltage
MWh	Megawatt hour
NEM	National Electricity Market
NER	National Electricity Rules
NMI	National Metering Identifier
p.a.	Per annum
POA	Price on application
SAC	Standard Asset Customer
TSS	Tariff Structure Statement

Definitions

Alternative Control Service	A distribution service provided by Ergon Energy that the AER has classified as an Alternative Control Service under the NER. Includes fee based services, quoted services, Default Metering Services and Public Lighting Services.
Australian Energy Regulator (AER)	The AER is an independent statutory authority that is part of the Australian Competition and Consumer Commission. The AER is responsible for the economic regulation of electricity networks in the National Electricity Market (NEM). It also monitors the wholesale electricity and gas markets and is responsible for compliance with and enforcement of the National Electricity Law (the Law), NER, National Gas Law and Rules, and the National Energy Retail Law and Rules.

Connection	The physical link to or through a transmission network or distribution network.
Connection Asset Customer (CAC)	Typically reflects those customers: ▪ with required capacity above 1,500 kVA ▪ with energy consumption typically greater than 4 GWh per annum (p.a.) (but less than 40 GWh p.a.), or ▪ with required capacity below 1,500 kVA where: ○ a customer has a dedicated supply system which is quite different and separate from the remainder of the supply network, or ○ inequitable treatment of otherwise comparable customers will arise from the application of the 4 GWh p.a. threshold. The CAC group is further subdivided into categories based on voltage levels as follows: ▪ 66 kV – connected to either a 66 kV substation or a 66 kV line ▪ 33 kV – connected to either a 33 kV substation or a 33 kV line ▪ 22/11 kV Bus – connected to either a 22 kV or 11 kV substation ▪ 22/11 kV Line – connected to either a 22 kV or 11 kV line.
Connection assets	Those components of a transmission or distribution system which are used to provide connection services. Connection assets are those assets required to connect an electrical installation to the shared network and are all the assets from the connection point back up to and including the network coupling point.
Connection point	The agreed point of supply established between the Network Service Provider(s) and another Registered Participant, Non-Registered Customer or franchise customer.
Customer	A person or entity that receives, or wants to receive a supply of electricity for a premises, or any other distribution service from Ergon Energy.
Default Metering Services	A type of Alternative Control Service. Relates to: ▪ Type 5 and 6 meter installation and provision (before 1 July 2015) ▪ Type 5 and 6 meter installation and provision (on or after 1 July 2015), where the replacement meter is initiated by Ergon Energy as a distributor ▪ Type 5 and 6 metering maintenance, reading and data services.
Direct Control Service	Distribution services subject to economic regulation by the AER under the NER. Direct Control Services are further subdivided into Standard Control Services and Alternative Control Services.
Distribution Determination	The AER's Distribution Determination sets the revenue and pricing control regime that Ergon Energy must comply with for the current regulatory control period (i.e. 2015–20).
Distribution network	The electrical system used to transport electricity from the high voltage transmission network connection point to distribution network users.

Embedded Generator (EG)	EGs are those network users that export energy into the distribution system, except for network users with micro-generation facilities of the kind contemplated under Australian Standard (AS) 4777.1 – 2005. EGs are separated into two categories: ▪ EGs that are connected to the distribution system and only generate into the distribution system ▪ EGs that are connected to the distribution system, generate and take load from the system.¹¹
Fee based services	A type of Alternative Control Service which Ergon Energy undertakes at the request of an identifiable customer, retailer or appropriate third party which is levied as a separate charge. The costs of providing the service (and therefore price) can be assessed in advance of the service being requested.
High Voltage (HV)	Refers to parts of the network that are 11 kV or above.
Individually Calculated Customer (ICC)	Typically reflects those customers: ▪ with energy consumption typically greater than 40 GWh p.a., or ▪ with energy consumption lower than 40 GWh p.a. where: ○ a customer has a dedicated supply system which is quite different and separate from the remainder of the supply network ○ there are only two or three customers in a supply system, making average prices inappropriate ○ a customer is connected at or close to a Transmission Connection Point, or ○ inequitable treatment of otherwise comparable customers will arise from the application of the 40 GWh p.a. threshold.
kW	1,000 Watts which is a measure of the real component of power being consumed by the consumer's load.
Low Voltage (LV)	Refers to the sub 11 kV network.
Major customer	Are ICCs, CACs or EGs.
National Electricity Market (NEM)	The interconnected electricity grid covering Queensland, New South Wales, Victoria, Tasmania, South Australia and the Australian Capital Territory.
National Electricity Rules (NER)	Rules made under the Law which govern the operation of the NEM.
National Metering Identifier (NMI)	A unique number assigned to each metering installation.
Network capacity	The maximum demand (kW) that the distribution network can provide for at any one time.
Network coupling point	The point at which connection assets join a distribution network, used to identify the distribution service price payable by a connection customer.
Network user	There are four network user groups included in Ergon Energy's network tariff structures – ICCs, CACs, SACs and EGs. For the purposes of our network pricing documents, the term 'network user' refers to both a 'customer' and an 'EG'.

¹¹ The load side will be classified as an ICC, CAC or SAC, and a separate network tariff will apply.

Premises	Means premises owned or occupied by the customer.
Public Lighting Services	A type of Alternative Control Service. Relates to the provision, construction and maintenance of public lighting assets owned by Ergon Energy, and emerging public lighting technology. Also encompasses public lighting exit fees.
Public lights – Major	Includes the following lantern types: ▪ Metal Halide – above 125 W ▪ Mercury Vapour – above 125 W ▪ High Pressure Sodium – above 100 W.
Public lights – Minor	Includes the following lantern types: ▪ Compact Fluorescent – all wattages ▪ Fluorescent – all wattages ▪ Metal Halide – up to and including 125 W ▪ Incandescent – all wattages ▪ Low Pressure Sodium – all wattages ▪ LED – all wattages ▪ Mercury Vapour – up to and including 125 W ▪ High Pressure Sodium – up to and including 100 W.
Quoted services	A type of Alternative Control Service. Similar to fee based services, but they are priced on application as the nature and scope of these services is variable and the cost (and therefore price) is specific to the individual requestor's needs.
Standard Asset Customer (SAC)	Typically reflects those customers with annual energy consumption below 4 GWh p.a. Includes customers with micro-generation facilities (such as small scale photovoltaic generators) of the kind contemplated under AS 4777.1 – 2005. The SAC group is further subdivided into network tariff categories based on whether: ▪ the customer's connection is metered or unmetered ▪ the customer's consumption relates to residential or business use ▪ the customer is taking supply at high voltage or low voltage ▪ the customer's consumption is above or below 100 MWh p.a. ▪ the customer has a meter installed capable of recording demand ▪ the customer's supply is capable of being controlled by Ergon Energy.
Standard Control Service	A distribution service provided by Ergon Energy that the AER has classified as a Standard Control Service under the NER. Includes network services, some connection services (including small customer connections) and Type 7 metering services. Ergon Energy recovers our costs in providing Standard Control Services through the DUOS component of network tariffs which are billed to retailers.

Tariff class	A class of customers for one or more Direct Control Services who are subject to a particular tariff or particular tariffs (as defined in the NER). Ergon Energy has five tariff classes for Alternative Control Services: ▪ fee based services (urban/short rural) ▪ fee based services (long rural/isolated) ▪ quoted services ▪ Default Metering Services ▪ Public Lighting Services.
Unmetered	A customer who takes supply where no meter is installed at the connection point.
