Network Price List
Effective 1 August 2002
Excluding GST**

Country Energy Network Price List Effective 1 August 2002 (Excluding GST)

The rates in this booklet are not Retail Tariffs.

The rates in this booklet are the rates charged to retailers of electricity for the use of Country Energy's distribution system. These rates are inclusive of charges levied on Country Energy by transmission network service providers. They do not include the cost of energy.

Transmission and distribution loss factors, applicable for the purchase of energy transported through Country Energy's network, are available on NEMMCO's website at www.nemmco.com.au. Loss factors are not to be applied to network charges.

Description:	LV TOU Seasonal Demand
Type:	Business
Urban/Non-urban	Both
Location:	All Country Energy
Billing/Meter Reading Frequency	Monthly
Application:	This tariff is available to customers with a minimum on-season anytime Demand of 1500kVA and a load factor for at least 4 months of the year of better than 60%. Demand Charges will be calculated as follows: 1. The daily kVA maximum demand in each of the Peak, Shoulder, and Off Peak periods will be metered for each day of the month. 2. The metered kVA Demand for each day for each of the Peak, Shoulder and Off Peak periods will be summed for the month and divided by the number of days in the month. This means that Peak and Shoulder Demand will be divided by the number of weekdays excluding public holidays. Off Peak Demand will be divided by the total number of days. 3. The average TOU Demand calculated above will be multiplied by the TOU Demand rates. 4. No adjustments to billable demand shall be made for pre-season "test runs".
	Unit Rate
Network Access Charge \$ / Day	4.57788

Network Price List Other Fees and Charges

Effective 1 August 2002

2. Other Fees and Charges

2.1 Special Meter Reading Fee

When a special meter reading is requested by a customer or Retailer, other than a check reading in relation to a disputed ordinary account or upon the termination of the occupancy of the premises by the customer, an appropriate fee will be charged.

The meter reading will generally be carried out during normal working hours.

Amount of fee: In normal working hours \$30-00 excluding GST, \$33-00 including GST

Outside normal working hours \$75-00 excluding GST, \$82-50 including GST

2.2 Disconnection Visit Fee

This charge applies to a visit by Country Energy staff with the specific intent to disconnect a customer at the time of the visit.

The visit to the customer with the intent of disconnection can only occur once the provisions of the Electricity Supply (General) Regulation 1996 (Schedule 2, Part 4, Division 2, Clause 40) with respect to the disconnection of customers have been completed in full.

The Disconnection Visit fee may be levied only in circumstances where:

1. The customer has been warned of impending disconnection by issue of a late payment reminder notice. This notice must clearly provide information to customers regarding financial assistance available, particularly through the Energy Account Payment Assistance (EAPA) scheme. Subject to the rules applicable to Late Payment charges, the \$5.00 excluding GST, \$5.50 including GST. Late Payment charge may be levied for this notice.
2. Country Energy has sent to the customer at least 2 written notices of Country Energy's intention to disconnect, the second notice to be sent no earlier than one week after the first notice.
3. Country Energy has made and documented reasonable attempts to deal with the customer in person or by telephone, whether before or after sending any disconnection notice, for the purpose of assisting the customer to do whatever is necessary to remove the grounds referred to in that notice.
4. Having completed this process, a Country Energy representative visits the customer personally with an intention to disconnect. The Tribunal considers it important that the customer be given the opportunity to make an acceptable payment on the account before a Personal Visit fee is levied. At the time of the personal visit, the customer may avoid disconnection by making an acceptable payment on the account (not necessarily the full outstanding balance).

If an acceptable payment is received, and the Country Energy representative does not proceed with disconnection, Country Energy may charge the \$30 excluding GST, \$33.00 including GST, Personal Visit fee. In cases where the customer does not make an acceptable payment and disconnection proceeds, Country Energy may charge the \$60 excluding GST, \$66.00 including GST, Personal Visit fee. This also covers the cost of a second visit to reconnect the customer. If the customer makes an acceptable payment on the overdue account, and pays the \$60 excluding GST, \$66.00 including GST disconnection visit charge, during normal business hours, then the customer is entitled to be reconnected that day at no extra cost; that is, no after hours fees can be charged for the reconnection. A collection fee is charge for all accounts when a Country Energy collector or agent endeavours to collect an overdue account payment. This fee may not exceed the maximum allowable as determined by the appropriate government regulator.

Amount of fee: \$30-00 excluding GST, \$33.00 including GST when collection involves site visit and a satisfactory arrangement to pay is negotiated with the customer, or

\$60-00 excluding GST, \$66.00 including GST where an acceptable payment is not received and supply is disconnected

\$100-00 excluding GST, \$110-00 including GST where disconnection occurs at a pole top/pillar box and meter disconnection

2.3 Meter Test Fee

Any customer applying for a meter test must, before any test is made, pay a meter fee to cover the cost of the test. The fee will be returned to the customer if the meter is found to be registering incorrectly as defined by the franchise customer metering code. Any account in dispute must be paid in full before the meter is tested.

This fee may not exceed the maximum allowable as determined by the appropriate government regulator.

Amount of fee: \$50-00 excluding GST, \$55.00 including GST per meter tested.

Outside Normal Business Hours \$125-00 excluding GST, \$137.50 including GST per meter tested

2.4 Rectification of Illegal Connection

When rectification to Country Energy owned equipment is needed following an illegal reconnection of supply by a customer, an appropriate fee will be charged.

Amount of fee: Normal Business Hours \$150-00 excluding GST, \$165-00 including GST

Outside Normal Business Hours \$475-00 excluding GST, \$522-50 including GST

2.5 Conveyancing Inquiry

When information is required by a customer in response to an enquiry relating to conveyancing activity, an appropriate fee will be charged. Note: no GST is applicable to conveyancing inquiries.

Amount of fee: Desk enquiry \$25-00 excluding GST

Field visit \$50-00 excluding GST

Total \$75-00 excluding GST

2.6 Provision of Time of Use or Half Hourly Metering Data (Per Half Hour)

When information is required by a customer in response to an enquiry relating to the provision of time of use or half hourly metering data, an appropriate fee will be charged.

Amount of fee: \$25-00 excluding GST, \$27-50 including GST

2.7 Account Establishment Fee

The Account Establishment fee is to cover the costs of establishing a new customer in its records, including but not limited to recording the initial meter readings and reconnecting supply (if it has been temporarily disconnected)

Amount of fee: In normal working hours \$35-00 excluding GST, \$38.50 including GST

Outside normal working hours \$87-50 excluding GST, \$96-25 including GST

2.8 Transfer between Tariffs and Other Products (Off Peak Conversion)

Where it is known that a different tariff becomes applicable due to an alteration in the use of electricity in a premise, the tariff may be changed subject to the approval of Country Energy.

Where a customer requests a change in product option then a changeover fee may become applicable. Typically this applies to optional controlled load products.

Customers will be allowed to change their off-peak pricing option once in a 12 month period at no cost. Should the customer request a further change in off-peak pricing option within that 12 month period then this fee will apply.

This charge does not cover repairs to damaged metering or time control equipment.

Amount of fee: In normal working hours \$40-00 excluding GST, \$44-00 including GST

Outside normal working hours \$100-00 excluding GST, \$110-00 including GST

2.9 Charges for Monopoly Services Associated with Contestable Work

Notes:

1. Level of inspection determined prior to commencement of job and based on grade of accredited service provider.
2. \$600 for a simple substation (single transformer/RMI unit) other at hourly rate including setting/re-setting protection equipment.
3. Where individual service connections are required for multiple dwelling subdivisions, the per lot fee should be applied per service connection.
4. Inspections are based on 3 visits. Substation poles are not included.

The inspection for substation poles is:

A Grade – 3.5 hours @ R2;
B Grade – 7.0 hours @ R2;
C Grade – 9.0 hours @ R2.

5. Hourly rate to be determined based on complexity of the job.

Hourly Labour Rates Applicable to Monopoly Services:

Labour Class	Hourly Rate
Admin R1	\$44.00
Design R2a	\$54.00
Inspector R2b	\$54.00
Engineer R3	\$65.00

6. All Monopoly Fees are subject to the GST of 10%.
7. Effective 1 August 2002.
8. Grading of Contractors is as defined in CEK 8004 Customer Installation Safety Plan 15 April 2002.

The frequency and level of inspections will be based on a grading assigned to each electrical contractor and/or Level 2 Authorised Service Provider. The grading will be established using the guidelines in the following tables:

Electrical Contractors (NOEW forms)

Contractor Grade	Inspection Rate	Major Defect Rate
A	20% = 1 in 5 NOEW's	5% = 1 in 20 inspections = 100 notifications
B	50% = 1 in 2 NOEW's	10% = 1 in 10 inspections = 20 notifications
C	100% = 1 in 1 NOEW's	20% = 1 in 5 inspections = 5 notifications

The Contractor's work history of major safety breaches, (as defined in Appendix 3 - Code of Practice - Installation Safety Management), in conjunction with the number of notifications submitted, will be used to determine the contractor's grade. A contractor will not be considered for a higher grade than C, unless at least 10 notifications have been received within the previous 12 months.

Authorised Service Providers (NOSW forms)

Contractor Grade	Inspection Rate	Major Defect Rate
A	5% - 1 in 20 NOSW's	<3% - (1 in 33 notifications)
B	20% - 1 in 5 NOSW's	3-5% - (1 in 20 notifications)
C	50% - 1 in 2 NOSW's	5-20% - (1 in 5 notifications)

2.9 Charges for Monopoly Services Associated with Contestable Work (Cont)

HV Substation & Subtransmission	BS0A	1.0311

* As published in NEMMCO Distribution Loss Factors for the 2002/03 Financial Year 13 May 2002

6. Country Energy Regions

Country Energy supplies electricity to customers in the following Local Government areas:

6.1 Northern Region

Armidale Dumaresq	Great Lakes	Nundle
Ballina	Greater Taree	Parry
Barraba	Gunnedah	Pristine Waters
Balonne	Guyra	Quirindi
Bellingen	Hastings	Richmond Valley
Bingara	Inglewood	Severn
Bourke	Inverell	Stanthorpe
Brewarrina	Kempsey	Tamworth
Byron	Kyogle	Tenterfield
Coffs Harbour	Lismore	Tweed
Copmanhurst	Maclean	Urulla
Dungog	Manilla	Waggamba
Glen Innes	Moree Plains	Walcha
Gloucester	Murrurundi	Walgett
Goondiwindi	Nambucca	Yallaro
Grafton	Narrabri	

These local government areas include the following towns:

Network Price List Explanatory Notes

Effective 1 August 2002

7. Applicability of Network Charges

7.1 Goods and Services Tax

The network use of system prices are **exclusive** of the 10% Goods and Services Tax.

7.2 Choice of Network Charges

It is a matter for the Retailer of Choice to determine the most economical available Network Tariff. Transfers between Tariffs will apply from the beginning of the normal billing period following the month in which written advice is received and will not be made retrospectively.

Country Energy reserves the right to review a customer's network price in the event of load changes and notify the customer's retailer of any resulting changes. The final decision on the appropriate network price for a customer shall be at the discretion of Country Energy.

All customers entering the contestable electricity market will normally be transferred to the appropriate network price reflecting the customer's previous regulated retail tariff.

7.3 Mid-Month Change of Retailer of Choice

Where customers change their Retailer of Choice in the middle of a calendar month, network bills will be allocated between the Retailers on a pro-rata basis depending on the number of days of the month that the customer was contracted with each Retailer.

7.4 Controlled Load

All controlled load equipment for customers who have hot water, process heating or any other approved circuits which are controlled by Country Energy to reduce demand on its feeders shall remain a Network asset belonging solely to Country Energy and as such cannot be removed without permission.

Controlled Load One applies where permanently connected appliances are controlled by Country Energy's equipment so that supply is generally available for 5 to 9 hours overnight on working weekdays and all hours on other days except where the load is controlled by a time clock. Controlled Load Two applies where permanently connected appliances are controlled by Country Energy's equipment so that electricity is available for 10 to 18 hours per day on working weekdays and all hours on other days except where the load is controlled by a time clock. Country Energy reserves the right to vary these times to suit network conditions without affecting the customer's usage of the appliances. The load control receiver remains the property of Country Energy.

7.5 Standby Supply

Where customers such as embedded generators require standby supply, the network charges applicable will be negotiated on the basis of the assets involved and the frequency and duration of use of the standby supply.

7.6 Domestic

Available for all consumption in premises used wholly or principally as private dwellings. A private dwelling is a house, flat, home unit, town house or similar premises and includes boarding houses, churches, the residential sections of nursing homes, hospitals and educational institutions, and approved caravan parks.

7.7 Business General Supply (Non-Time of Use)

BLNN1AU and BLNN1AR are available for low voltage electricity supplied to premises for any purpose. These prices are generally applicable to factories, warehouses, hotels, motels, shops, offices, schools, sporting and social clubs whose consumption does not exceed 100MWh per year.

7.8 Business Time of Use

BLNT2AU and BLNT2AR are available for the same purposes as Business General Supply. The Time of Use option enables financial benefits for controlled usage at predetermined time periods as listed in Definitions below.

7.9 Supply to Low Load Factor Customers

Where a customer's annual load factor (average load divided by maximum load) at a point of supply is less than 15%, the chargeable demand will be based on an assessment of the capacity provided.

7.10 Location Specific (CRNP)

A locational specific network price will be negotiated with a customer where:

1. The customer is connected at subtransmission voltages, or
2. The customer is connected to the terminals of a subtransmission substation and has contributed specifically to the cost of the subtransmission system supplying the customer between the subtransmission substation and the customer point of connection.

CRNP is a procedure of allocating networks costs in accordance with National Grid protocols. On achieving eligibility a customer will receive the CRNP price. These customers will be subject to individual price formulation based on the CRNP methodology.

Customers not eligible for a CRNP tariff will receive the standard network price.

8. Definitions

SUPPLY VOLTAGES Country Energy reserves the right to determine the voltage at which supply shall be made available to any particular Customer. The general voltage levels referred to in the prices are:

Low Voltage (LV)	nominally 240/415V
High Voltage (HV)	nominally 11, 22 or 33kV
Subtransmission (ST)	The voltage of any circuit which inter-connects sub-transmission or zone substations (on the primary side of the transformer).

PEAK PERIOD is from 7.00 am to 9.00 am and 5.00 pm to 8.00 pm on working weekdays.

SHOULDER PERIOD is from 9.00 am to 5.00 pm and 8.00 pm to 10.00 pm on working weekdays.

OFF-PEAK PERIOD is at all other times.

All times are Eastern Standard Time and Eastern Daylight Saving Time as appropriate.

DISTRIBUTION (AND TRANSMISSION) LOSS FACTORS This factor is used by the retailer in the market settlement process to add to the energy consumed by the customer, an amount equivalent to the average energy losses for the applicable network price category. The Distribution Loss Factors shown in the Network Price List do not include Transmission Loss Factors (TLF).

Transmission loss factors for NSW connected customers vary depending on the customers Transmission Node Identifier (TNI). Loss factors for Country Energy transmission nodes are available on NEMMCO's website at www.nemmco.com.au.

OTHER DISTRIBUTION LOSS FACTORS Other distribution loss factors may apply to certain sites - For information, please ring for details.

NATIONAL METERING IDENTIFIER Country Energy will issue National Metering Identifiers (NMI) for each site in accordance with Section 1.7 of NEMMCO's "NMI Procedure" document ME_GN059.

NETWORK ACCESS CHARGE This is a fixed charge applied to each point of connection at which energy or demand is measured reflecting the fixed nature of network operational and asset related costs. A separate Network Access Charge will apply to each National Market Identifier (NMI) as defined in the NEMMCO "NMI Procedure" document ME_GN059 for the configuration of metering at a given site. The Network Access Charge has been altered to a daily rate in order to facilitate customer transfers under full retail competition.

TIME OF USE (TOU) RATES With a time of use meter installed, the energy is charged according to peak, shoulder and off-peak time periods.

NON TOU NETWORK USAGE RATES The Non Time of Use charge (c/kWh) is applied to the total energy determined from an energy only meter.

THREE RATE DEMAND The Demand charge (\$/kVA/month) is applied to the calendar monthly kVA demand measured by the meter for the peak, shoulder and off peak periods. The monthly kVA demand is the maximum half hour demand for the month occurring within the peak, shoulder and off peak periods and is calculated using the kWh and kVARh energy components recorded by the Code compliant meter. The method of demand measurement is 30 minute clocked. LV TOU Seasonal Demand and HV TOU Seasonal Demand tariffs are exceptions to this description. Demand charges for these tariffs are calculated as set out in the tariff description.

A separate demand will apply at each individual connection point as defined by NEMMCO's "NMI Procedure" document ME_GN059. Coincident or summated demand from multiple connection points is not permitted without the written approval of Country Energy. Approval will not be given where connection points are supplied from different substations.

SINGLE RATE DEMAND The Demand Charge is based on the highest measured half-hour kVA demand during the month. Concessional demand rates may be available to customers with maximum demand in the 0000 - 0600 period.

A separate demand will apply at each individual connection point as defined by NEMMCO's "NMI Procedure" document ME_GN059. Coincident or summated demand from multiple connection points is not permitted without the written approval of Country Energy. Approval will not be given where connection points are supplied from different substations.

URBAN TARIFF CUSTOMER A customer will be classified as Urban for the application of Network prices if that customer's supply is connected to the meshed interconnectable LV network allowing an alternative supply in the event of the failure of a transformer and is supplied from a Substation rated at 63kVA or greater or is underground.

RURAL TARIFF CUSTOMER A customer will be classified as Rural for the application of Network prices if that customer's 415 LV supply connection does not meet the definition of an Urban customer.

NETWORK PRICE LIST ENQUIRIES These can be directed to our Customer Service Centre, telephone 13 23 56.

Network Price List Explanatory Notes

Northern Region

Effective 1 August 2002

9. Applicability of Network Charges – Northern Region

9.1 Choice of Network Charges

It is a matter for the Retailer of Choice to determine the most economical choice between the BLND3AO LV Demand and BLND4NO LV Demand Option 2 and LV TOU prices. The LV Demand rates are most likely to be more economical for customers with higher load factors whilst LV Demand Option 2 and LV TOU prices are most likely to be more economical for customers with lower load factors.

9.2 Controlled Load

Controlled Load C applies where permanently connected appliances are controlled by Country Energy's equipment so that electricity is available for 14 to 18 hours per day on working weekdays and all hours on other days except where the load is controlled by a time clock. Country Energy reserves the right to vary these times to suit network conditions without affecting the customer's usage of the appliances. The load control receiver remains the property of Country Energy.

10. Definitions

Zone 1 Region C- Supply to this zone is covered by the following regional post codes.

Bulahdelah-2423, Maitland-2320, Nahiack-2312, Stroud Road-2415
