

Country Energy Network Price List Effective 1 July 2006

Country Energy Network Price List Effective 1 July 2006

The rates in this booklet are not Retail Tariffs.

The rates in this booklet are the rates charged to retailers of electricity for the use of Country Energy's distribution system. These rates are inclusive of charges levied on Country Energy by transmission network service providers & government legislation. Country Energy is also required to contribute towards the newly legislated Energy Savings Fund which will be used to support energy saving initiatives across New South Wales. These contributions are included as part of the NUOS charges from 1 July 2006.

They do not include the cost of energy.

Transmission and distribution loss factors, applicable for the purchase of energy transported through Country Energy's network, are available on NEMMCO's website at www.nemmco.com.au. Loss factors are not to be applied to network charges.

Network Price List and Access Criteria Effective 1 July 2006

1. Country Energy (excluding Far West Region) Network Use of System Prices 2006/2007

All information in sections 1-11 relate to Country Energy's North, South & Central regions only. Refer to section 12 for information relating to Country Energy's Far West Region.

All Network use of charges outlined in clause 1 are GST – exclusive and GST of 10% will be added to these charges.

The rates in this booklet are not Retail Tariffs.

The rates in this booklet are the rates charged to retailers of electricity for the use of Country Energy's distribution system. These rates are inclusive of charges levied on Country Energy by transmission network service providers. They do not include the cost of energy.

Transmission and distribution loss factors, applicable for the purchase of energy transported through Country Energy's network, are available on NEMMCO's website at www.nemmco.com.au. Loss factors are not to be applied to network charges.

1.1 Country Energy (excl Far West Region) Residential Network Use of System Charges

Tariff Code	BLNN2AU (Also Obsolete Tariffs BLNN2NU, BLNN1CU , BLNN2CU, BLNN2AR, BLNN2CR, BLNN2NR, BLNN2NQ, BLNN2SQ)
Description:	Domestic – Non TOU

Tariff Code	BLNS1AO (Also Obsolete Tariff BLNS1NO)
Description:	LV TOU Seasonal Demand
Type:	Business
Urban/Non-urban	Both
Location:	All Country Energy (excl Far West Region)
Application:	This tariff is available to customers with a minimum on-season anytime Demand of 1500kVA and a load factor for at least 4 months of the year of better than 60%. Demand Charges will be calculated as follows: 1. The daily kVA maximum demand in each of the Peak, Shoulder, and Off Peak periods will be metered for each day of the month. 2. The metered kVA Demand for each day for each of the Peak, Shoulder and Off Peak periods will be summed for the month and divided by the number of days in the month. This means that Peak and Shoulder Demand will be divided by the number of weekdays. Off Peak Demand will be divided by the total number of days. 3. The average TOU Demand calculated above will be multiplied by the TOU Demand rates. 4. No adjustments to billable demand shall be made for pre-season "test runs".
	Unit Rate
Network Access Charge \$ / Day	6.71020
Peak Demand Charge \$ / kVA / Month	6.766
Shoulder Demand Charge \$ / kVA / Month	6.766

Disconnection at meter box ¹	\$70.00	\$77.00
Disconnection at pole top/pillar box ¹	\$117.00	\$128.70
Rectification of illegal connection	\$175.00	\$192.50
Reconnection outside business hours ¹	\$75.00	\$82.50

*These charges are further explained in clauses 2.1 – 2.8 below

[#]Indicates the price payable by customers in clauses 2.1 -2.8 below

2.1 Special Meter Reading Fee

A charge may not be levied for the service described as “special meter reading” in any of the following circumstances:

- (1) where a customer or a retail supplier requests that the DNSP undertake a special meter read, (but does not apply where the special meter read was requested solely to verify the accuracy of a scheduled meter read and the special meter read reveals that the scheduled meter read was inaccurate or in error); or
- (2) where the DNSP attends at a customer's premises for the sole purpose of discharging the DNSP's obligation to read the customer's meter within the period specified by law (but not where the DNSP merely chooses to read the customer's meter without being under a legal obligation to do so) and on attending the customer's premises the DNSP is unable (through no act or omission of the DNSP), to gain access to the meter; or
- (3) where the DNSP and the customer agree on an appointed time at which the DNSP may attend the customer's premises to enable the DNSP to discharge the DNSP's legal obligation referred to in paragraph 2.1(2) and when the DNSP attended at the customer's premises at the appointed time the DNSP (through no act or omission of the DNSP), was unable to gain access to the customer's meter

Amount of fee: In Normal Working Hours \$35-00 excluding GST, \$38-50[#] including GST

2.2 Disconnection Visit Fee

This fee is charged where the DNSP is required to disconnect a customer for a breach of the supply or connection contract **or** where requested to by a retailer for any reason.

This fee can only be charged directly to a customer if there is a breach of the customer supply and connection contract.

Therefore, when a second tier retailer contacts the network to arrange a disconnection, the \$70.00, \$77.00 including GST, fee is charged to the retailer. If on the other hand the customer contacts the network directly to organise the disconnection then the disconnection fee would not apply, as the customer is not being disconnected for a breach of the supply and connection contract.

This charge applies to customer's that have breached their supply or connection resulting in a visit by Country Energy staff with the specific intent to disconnect a customer at the time of the visit.

The visit to the customer with the intent of disconnection can only occur once the provisions of the Electricity Supply (General) Regulation 1996 (Schedule 2, Part 4, Division 2, Clause 40) with respect to the disconnection of customers have been completed in full.

The Disconnection Visit fee may be levied only in circumstances where:

1. The customer has been warned of impending disconnection by issue of a late payment reminder notice. This notice must clearly provide information to customers regarding financial assistance available, particularly through the Energy Account Payment Assistance (EAPA) scheme.
2. Country Energy has sent to the customer at least 2 written notices of Country Energy's intention to disconnect, the second notice to be sent no earlier than one week after the first notice.
3. Country Energy has made and documented reasonable attempts to deal with the customer in person or by telephone, whether before or after sending any disconnection notice, for the purpose of assisting the customer to do whatever is necessary to remove the grounds referred to in that notice.
4. Having completed this process, a Country Energy representative visits the customer personally with an intention to disconnect. The Tribunal considers it important that the customer be given the opportunity to make an acceptable payment on the account before a Personal Visit fee is levied. At the time of the personal visit, the customer may avoid disconnection by making an acceptable payment on the account (not necessarily the full outstanding balance).

If an acceptable payment is received, and the Country Energy representative does not proceed with disconnection, Country Energy may charge the \$35 excluding GST, \$38.50[#] including GST, Disconnection Visit fee. In cases where the customer does not make an acceptable payment and disconnection proceeds, Country Energy may charge the \$70 excluding GST, \$77.00[#] including GST, Disconnection at meter box fee or the \$117.00 excluding GST, \$128.70[#] including GST, Disconnection at pole top/pillar box fee. This also covers the cost of a second visit to reconnect the customer if connected during Normal Business Hours (an Additional Reconnection outside Normal Business Hours fee of \$75.00 excluding GST, \$82.50[#] including GST will apply for after hour's reconnection).

Amount of fee: \$35-00 excluding GST, \$38-50[#] including GST when collection involves site visit and a satisfactory arrangement to pay is negotiated with the customer, or

\$70-00 excluding GST, \$77-00[#] including GST where an acceptable payment is not received and supply is disconnected at meter box¹

\$117-00 excluding GST, \$128-70[#] including GST where disconnection occurs at a pole top/pillar box disconnection¹

\$75-00 excluding GST, \$82-50[#] including GST where reconnection occurs Outside Normal Working hours¹

¹ For the avoidance of doubt, if, following a request from a customer, the reconnection component of the services described in paragraph 2.2 as "Disconnection at meter box" and "Disconnection at pole top/pillar box" are provided outside the hours of 7.30am and 4.00pm on a Working Day, the charge that the DNSP may levy for the provision of each of those services will be the charge for each service in paragraph 2.2 plus the charge for the service described as "Reconnection outside normal business hours" paragraph 2.7.

2.3 Meter Test Fee

If the service described as "meter test" is undertaken on premises serviced by more than one meter the following applies:

- (1) if the meter test reveals that all of the meters are operating satisfactorily, a DNSP may only levy one charge for the provision of the service as if the meter test were undertaken on a single meter;
- (2) if the meter test reveals that one or more of the meters are operating satisfactorily and one or more are not operating satisfactorily, the DNSP may not levy any charge for the provision of the service; and
- (3) If the meter test reveals that none of the meters are operating satisfactorily, the DNSP may not levy any charge for the provision of the services.

This fee may not exceed the maximum allowable as determined by the appropriate government regulator.

Amount of fee: Normal Working Hours \$58-00 excluding GST, \$63-80[#] including GST per meter tested.

2.4 Rectification of Illegal Connection

When rectification to Country Energy owned equipment is needed following an illegal reconnection of supply by a customer, an appropriate fee will be charged.

Amount of fee: Normal Working Hours \$175-00 excluding GST, \$192-50[#] including GST

2.5 Conveyancing Inquiry

When information is required by a customer in response to an enquiry relating to conveyancing activity, an appropriate fee will be charged. **Note: no GST is applicable to conveyancing inquiries.**

Amount of fee: Desk enquiry \$29-00 excluding GST

Field visit \$58-00 excluding GST

Total \$87-00 excluding GST

2.6 Site Establishment Fee

The Site Establishment Fee for new connections will **take effect from 1st November 2004 as advised to Accredited Service Providers (ASP's) by Country Energy.**

This fee is being charged directly to the Accredited Service Provided (ASP) who can, in turn pass the cost through to the 'client' who would be an owner builder or developer (i.e. not the tenant).

The site establishment fee is to cover the costs of establishing a new account at a new premise.

Amount of fee: In Normal Working Hours \$110-00 excluding GST, \$121-.00[#] including GST

2.7 Reconnection Outside Normal Business Hours Fee

The reconnection outside normal business hours fee is to cover the costs of reconnecting supply (if it has been temporarily disconnected). The cost of reconnecting a premise during normal working hours is included in the relevant disconnection fee. Country Energy may charge the \$75.00 excluding GST, \$82.50[#] including GST, if the reconnection occurs outside normal working hours. Requests made after 3pm for same day reconnection can not be carried out during working hours.

(1) The provision of the reconnection component of the service described in paragraphs (2.2) outside the hours of 7.30am and 4.00pm on a Working Day, at the request of a customer; or

(2) The connection of electricity to a new customer outside the hours of 7.30am and 4.00pm on a Working Day at the request of the customer.

Amount of fee: Outside Normal Working Hours \$75-00 excluding GST, \$82-50[#] including GST

2.8 Transfer between Tariffs and Other Products (Off Peak Conversion)

Where it is known that a different tariff becomes applicable due to an alteration in the use of electricity in a premise, the tariff may be changed subject to the approval of Country Energy.

Where a customer requests a change in product option then a changeover fee may become applicable. Typically this applies to optional controlled load products.

Customers will be allowed to change their off-peak pricing option once in a 12 month period at no cost. Should the customer request a further change in off-peak pricing option within that 12 month period then this fee will apply.

This charge does not cover repairs to damaged metering or time control equipment.

Amount of fee: In Normal Working Hours \$47-00 excluding GST, \$51-70[#] including GST

2.9 Conditions relating to charges for monopoly services

Notes:

1. Inspection

For the service described as “Inspection”:

1. in the case of “Commercial and Industrial developments” and “Asset Relocation or Street Lighting”, the level of inspection is to be determined by the DNSP prior to performing the service;
2. the grade specified is the grade of the ASP, accredited for that grade;
3. In the case of “Rural Overhead Subdivisions and Rural Extensions”, the charge applies to inspections (other than substation poles) and represents the total charge for three separate visits. For substation poles the charge for ASP grade A is \$221; for grade B is \$441 and for grade C is \$556. (All charges outlined are GST exclusive and GST of 10% will be added to these charges.)

The frequency and level of inspections/test will be based on a grading assigned to each Electrical Contractor/Service Provider. The grading will be established using the guidelines in the following table:

Table 1 Inspection rate subject to Grade

Grade	Inspection Rate
A	4% = 1 inspection per 25 jobs
B	20% = 1 inspection per 5 jobs
C	100% = Each job to be inspected

2. Substation commissioning

The commissioning by a DNSP of a new substation, (whether it is a single pole, padmount/kiosk or indoor/chamber) and includes:

- (1) all necessary pre-commissioning checks and tests prior to energising the substation via the high voltage switchgear and closing the low voltage circuit breaker, links or fuses; and
- (2) the setting or resetting of protection equipment.

3. Lots

In table 2.9, where the monopoly service relates to a service connection required for multiple dwelling subdivisions, the per lot fee in that table should be applied per service connection. (All Monopoly Fees are exclusive of GST to which GST of 10% will be added.)

4. Design Information/Design Certification/ Design Rechecking

For the services described as “Design Information”, “Design Certification” and “Design Rechecking”, the labour rate (R2 or R3) is to be applied based on the DNSP’s assessment of the level of skill required to perform the service.

1. **Inspection of service work (Level 1 work).** The inspection by a DNSP of work undertaken by an ASP accredited to perform Level 1 work, for the purpose of ensuring the quality of assets to be handed over to the DNSP.
2. **Inspection of service work (Level 2 work).** The inspection by a DNSP of work performed by an ASP accredited to perform Level 2 work, complying with the condition below.
3. **Re-Inspection of Level 1 or Level 2 work.** The re-inspection by a DNSP of work (other than Customer Installation work) undertaken by an ASP accredited to perform Level 1 or Level 2 work, for the reason that on first inspection the work was found not to be satisfactory.
4. **Re-inspection of work of a Service Provider.** The re-inspection by a DNSP of Customer Installation work undertaken by a Service Provider for the reason that on first inspection the work was found not to be satisfactory.

5. Travel time

A DNSP may, in addition to the charge specified or calculated under table 2.9, charge for travel time (in excess of two hours) incurred in performing the service, at the rate of \$63 per hour.

In addition to the charge specified or calculated in the table (Labour Class Hourly Rate) travel time will be charged for one hour multiplied by the associated hourly rate for each particular service.

6. Overtime

If a monopoly service is provided outside the hours of 7.30am and 4.00pm on a Working Day at the request of an ASP (except where the DNSP requires that the work be performed at that time) the charge that the DNSP may impose for the provision of that service will be an amount up to 175% of the charge for that service in table 2.9.

7. Labour rates

- (1) In table 2.9 the references to R1, R2 and R3 denote the class of labour which performs the service at the hourly rate corresponding to the class in table 3 below.
- (2) For the purpose of the labour class R2 in the table, the DNSP will determine whether the service is to be provided by an inspector or an engineer at that class, depending on the nature and complexity of the service.

Labour class Hourly rate

Labour Class	Hourly Rate
Admin R1	\$51.00
Design R2a	\$63.00
Inspector R2b	\$63.00
Engineer R3	\$76.00

8. Charges for Emergency Recoverable Works

(a) The charge that a DNSP may levy for Emergency Recoverable Works must not exceed the sum of the following:

(1) 110% of the costs (other than labour costs) actually incurred in providing the emergency recoverable works; and

(2) the cost of labour actually used to undertake the emergency recoverable works determined by applying 150% of the R2 labour rate for that labour.

(b) For the avoidance of doubt, in the application of paragraph 5.1(a)(2), where a DNSP retains labour for a specified period for the purpose of that labour undertaking emergency recoverable works, the DNSP may only charge for so much of that specified period during which the labour actually undertakes the emergency recoverable works. For example, if a DNSP retains labour for a minimum specified period of four hours and the time required to actually undertake the emergency recoverable works is only one hour, the DNSP may only charge for the one hour and not the four hours.

9. Conditions for Emergency Recoverable Works

The charges for emergency recoverable works in paragraph 5.1 apply irrespective of whether the works are provided on a Working Day or the time of day at which they are provided.

10. Definitions and interpretation

(a) Definitions

1. In the Section 2 Other Fees and Charges of this Price List
ASP means an Accredited Service Provider and is a person who has been accredited under Part 10, Electricity Supply (General) Regulation 2001.

MSATS means the market settlement and transfer system operated by NEMMCO.

NMI means a national metering identifier.

Service Provider means a person who may lawfully undertake Customer Installation work

DNSP means Distribution Network Service Provider

2. In the section the following expressions have the meaning given to them in the Electricity Supply Act 1995:

electricity supply contract

electricity connection contract

retail supplier.

(b) Interpretation of grade or level of accreditation

(1) In this section, the reference to a grade or level, means the grade or level for which an ASP is accredited, applying the classification system in table 2 below, or if this classification system is amended during the Determination, the classification system as amended.

(2) If the classification system in table 2 is amended during the Determination, the reference in this Annexure to a grade or level will be taken to be a reference to the grade or level in the amended classification system that most closely approximates the grade or level in table 2.

Table 2 Classification

Accreditation	Type of work	Category
Level 1	Construction of transmission and distribution and distribution works, including high and low voltage, overhead and underground reticulation and substations	Underground (UG) Overhead (OH)
Level 2	Service work: Construction and/or installation of the service line interface between the distribution system and consumer terminals, including metering services	Disconnection & reconnection Underground (UG) service Lines Overhead (OH) service lines Metering and energising new installations Installing contestable metering – under review
Level 3	Design of transmission and distribution works	Underground (UG) Overhead (OH)

11. All Monopoly Fees are exclusive of GST to which GST of 10% will be added.

12. Effective 1 July 2004.

Table 2.9 Charges for Monopoly Services Associated with Contestable Work (Cont)

Monopoly Service	Underground Urban Residential Subdivision (Vacant Lots)				Rural Overhead Subdivisions and Rural Extensions				Underground Commercial and Industrial or Rural Subdivisions (Vacant Lots – No Development)				Commercial and Industrial Developments	Asset Relocation or Street Lighting
Design Information (Minimum 1 Hour)	Up to 5 lots	\$126			R2 per hour				R2 per hour				R2 per hour	R2 or R3 per hour (see para 4.2)*

Network Price List Explanatory Notes

Effective 1 July 2006

8. Applicability of Network Charges

8.1 Goods and Services Tax

The network use of system prices and monopoly fees under clause 2.9 are **exclusive** of the 10% Goods and Services Tax. All customers will have GST of 10% added to all Network use of system prices and monopoly fees.

All customers will be charged the fee “including GST” under clauses 2.1 – 2.8 for Monopoly Fees

All customers will be charged the fee “including GST” under clauses 8.1 - 8.12 for NUOS.

8.2 Choice of Network Charges

It is a matter for the Retailer of Choice to determine the most economical available Network Tariff. Transfers between Tariffs will apply from the beginning of the normal billing period following the month in which written advice is received and will not be made retrospectively.

Retailers of choice/customers who choose to transfer off an obsolete tariff will lose all rights to all obsolete tariffs on that premise, i.e. the entire site will be required to move onto currently available tariffs. Exemptions to this rule are connection of additional services, e.g. if a site that currently has an obsolete General Supply Business tariff on a premise and they have Business Controlled Load One installed (i.e. new circuit, meter & relay); the Controlled Load One will be connected to the current Business Controlled Load One tariff while the obsolete General Supply tariff will remain.

Country Energy reserves the right to review a customer's network price in the event of load changes and notify the customer's retailer of any resulting changes. The final decision on the appropriate network price for a customer shall be at the discretion of Country Energy.

All customers entering the contestable electricity market will normally be transferred to the appropriate network price reflecting the customer's previous regulated retail tariff.

8.3 Mid-Month Change of Retailer of Choice

Where customers change their Retailer of Choice in the middle of a calendar month, network bills will be allocated between the Retailers on a pro-rata basis depending on the number of days of the month that the customer was contracted with each Retailer.

8.4 Controlled Load

All controlled load equipment for customers who have hot water, process heating or any other approved circuits which are controlled by Country Energy to reduce demand on its feeders shall remain a Network asset belonging solely to Country Energy and as such cannot be removed without permission.

NB. Where premises are converted to a TOU Tariff, CE Load Control Devices shall be left to control previously controlled consumer load. An application for additional load must be made by the consumer if previously controlled load is no longer controlled.

Controlled Load One applies where permanently connected appliances are controlled by Country Energy's equipment so that supply is generally available for 5 to 9 hours overnight on weekdays and all hours on weekends except where the load is controlled by a time clock. Controlled Load Two applies where permanently connected appliances are controlled by Country Energy's equipment so that electricity is available for 10 to 18 hours per day on weekdays and all hours on weekends except where the load is controlled by a time clock. Country Energy reserves the right to vary these times to

suit network conditions without affecting the customer's usage of the appliances. Inslab heating is to be metered and controlled separately to other controlled loads.

All hot water boost facilities are permitted but boost must be metered at primary tariff. This includes Big Blue hot water systems. Boost buttons supplied by Country Energy are **only available on A11 meters**. An additional charge of \$40.00 excluding GST, \$44.00[#] including GST will be charged to activate the boost button. **Please note:** This cost does not include the installation cost provided by an ASP.

8.5 Standby Supply

Where customers such as embedded generators require standby supply, the network charges applicable will be negotiated on the basis of the assets involved and the frequency and duration of use of the standby supply.

8.6 Domestic

Available for all consumption in premises used wholly or principally as private dwellings. A private dwelling is a house, flat, home unit, town house or similar premises and includes boarding houses, churches, the residential sections of nursing homes, hospitals and educational institutions, and approved caravan parks.

8.7 Business General Supply (Non-Time of Use)

BLNN1AU and BLNN1AR are available for low voltage electricity supplied to premises for any purpose. These prices are generally applicable to factories, warehouses, hotels, motels, shops, offices, schools, sporting and social clubs whose consumption does not exceed 100MW per year.

8.8 Business Time of Use

BLNT2AU and BLNT2AR are available for the same purposes as Business General Supply. The Time of Use option enables financial benefits for controlled usage at predetermined time periods as listed in Definitions below.

8.9 Supply to Low Load Factor Customers

Where a customer's annual load factor (average load divided by maximum load) at a point of supply is less than 15%, the chargeable demand will be based on an assessment of the capacity provided.

8.10 Location Specific (CRNP)

A locational specific network price will be negotiated with a customer where:

1. The customer is connected at subtransmission voltages, or
2. The customer is connected to the terminals of a subtransmission substation and has contributed specifically to the cost of the subtransmission system supplying the customer between the subtransmission substation and the customer point of connection.

CRNP is a procedure of allocating networks costs in accordance with National Grid protocols. On achieving eligibility a customer will receive the CRNP price. These customers will be subject to individual price formulation based on the CRNP methodology.

Customers not eligible for a CRNP tariff will receive the standard network price.

8.11 Subtraction Metering

Subtraction Metering is not permissible for new connections. The removal of subtraction metering for existing customers should be encouraged where ever possible when an existing site is upgraded.

TOU Tariffs are not available to premises with subtractive metering.

8.12 Premise Amalgamation

Premises fed from different substations must have different National Market Identifiers.

9. Definitions

SUPPLY VOLTAGES Country Energy reserves the right to determine the voltage at which supply shall be made available to any particular Customer. The general voltage levels referred to in the prices are:

Low Voltage (LV)	nominally 240/415V
High Voltage (HV)	nominally 11, 22 or 33kV
Subtransmission (ST)	The voltage of any circuit which inter-connects sub-transmission or zone substations (on the primary side of the transformer).

PEAK PERIOD is from 7.00 am to 9.00 am and 5.00 pm to 8.00 pm on weekdays.

SHOULDER PERIOD is from 9.00 am to 5.00 pm and 8.00 pm to 10.00 pm on weekdays.

OFF-PEAK PERIOD is at all other times.

All times are Eastern Standard Time and standard Eastern Daylight Saving Time as appropriate.

DISTRIBUTION (AND TRANSMISSION) LOSS FACTORS This factor is used by the retailer in the market settlement process to add to the energy consumed by the customer, an amount equivalent to the average energy losses for the applicable network price category. The Distribution Loss Factors shown in the Network Price List do not include Transmission Loss Factors (TLF).

Transmission loss factors for NSW connected customers vary depending on the customers Transmission Node Identifier (TNI). Loss factors for Country Energy transmission nodes are available on NEMMCO's website at www.nemmco.com.au.

OTHER DISTRIBUTION LOSS FACTORS Other distribution loss factors may apply to certain sites - For information, please ring for details.

NATIONAL METERING IDENTIFIER Country Energy will issue National Metering Identifiers (NMI) for each site in accordance with Section 1.7 of NEMMCO's "NMI Procedure" document ME_GN059.

NETWORK ACCESS CHARGE This is a fixed charge applied to each point of connection at which energy or demand is measured reflecting the fixed nature of network operational and asset related costs. A separate Network Access Charge will apply to each National Market Identifier (NMI) as defined in the NEMMCO "NMI Procedure" document ME_GN059 for the configuration of metering at a given site. The Network Access Charge has been altered to a daily rate in order to facilitate customer transfers under full retail competition.

NORMAL WORKING HOURS In relation to miscellaneous and monopoly services is defined as being between 7.30am and 4.00pm except on Saturdays, Sundays and Public Holidays. (Legislated by IPART in NSW Electricity Distribution Pricing 2004/005 – 2008/09 determination.)

TIME OF USE (TOU) RATES With a time of use meter installed, the energy is charged according to peak, shoulder and off-peak time periods.

NON TOU NETWORK USAGE RATES The Non Time of Use charge (c/kWh) is applied to the total energy determined from an energy only meter.

THREE RATE DEMAND The Demand charge (\$/kVA/month) is applied to the calendar monthly kVA demand measured by the meter for the peak, shoulder and off peak periods. The monthly kVA demand is the maximum half hour demand for the month occurring within the peak, shoulder and off peak periods and is calculated using the kWh and kVARh energy components recorded by the Code compliant meter. The method of demand measurement is 30 minute clocked. LV TOU Seasonal Demand and HV TOU Seasonal Demand tariffs are exceptions to this description. Demand charges for these tariffs are calculated as set out in the tariff description.

A separate demand will apply at each individual connection point as defined by NEMMCO's "NMI Procedure" document ME_GN059. Coincident or summated demand from multiple connection points is not permitted without the written approval of Country Energy. Approval will not be given where connection points are supplied from different substations.

SINGLE RATE DEMAND The Demand Charge is based on the highest measured half-hour kVA demand during the month. Concessional demand rates may be available to customers with maximum demand in the 0000 - 0600 period.

A separate demand will apply at each individual connection point as defined by NEMMCO's "NMI Procedure" document ME_GN059. Coincident or summated demand from multiple connection points is not permitted without the written approval of Country Energy. Approval will not be given where connection points are supplied from different substations.

URBAN TARIFF CUSTOMER A customer will be classified as Urban for the application of Network prices if that customer's supply is connected to the meshed interconnectable LV network allowing an alternative supply in the event of the failure of a transformer or is supplied from a Substation rated at 63kVA or greater or is underground.

RURAL TARIFF CUSTOMER A customer will be classified as Rural for the application of Network prices if that customer's 415 LV supply connection does not meet the definition of an Urban customer. Should a customer apply for a change in classification, due to a change in Network configuration over time, the change in classification will only apply from the date of customer application.

OBSOLETE TARRIFS: The word "obsolete" means that no new customers can be connected to this tariff.

Here are some examples of what can and can't be done.

1. If a site is newly connected to the CE network (greenfield site) it cannot use an obsolete tariff.
2. If a site changes ownership i.e. if Jackson P/L moves out and Mathews P/L moves into a site that was on an obsolete tariff, then the new customer Mathews P/L cannot be connected on the obsolete tariff.
3. If a customer who is on an obsolete tariff chooses to move to a non obsolete tariff (i.e. because they think it is more cost effective) then the obsolete tariff is no longer available to them. They cannot transfer back at a later date.
4. If a customer who is on an obsolete tariff changes Retailer of Choice, this is not considered a change of customer (although as far as a Country Energy Network is concerned the site now belongs to the Retailer of Choice and is listed in our billing system under the Retailer of Choice's name). Since this scenario is not considered a change of customer the customer will remain on the obsolete tariff (unless instructed not to by the Retailer of Choice).
5. A site that is connected to one obsolete tariff cannot transfer to another obsolete tariff. The only tariffs available to any site is
 - a. the tariff the site is already on (except where its usage changes so that the site no longer meets the application criteria for the existing tariff), or
 - b. any non obsolete tariff that the site has available to it based on the application criteria of the tariff and limitations of the installed metering.
6. Customers who have sites on obsolete tariffs can move off an obsolete tariff at any time. This can be done via a request from the Retailer of Choice to Country Energy Network Pricing group. Please note all requests for tariff change will be considered, and if approved will apply from the beginning of the normal billing period following the month in which written advice is received and will not be made retrospectively.

Please note that the word obsolete may have a different meaning when applied to Retail tariffs.

UNMETERED SUPPLIES Unmetered supplies must conform to all of the following criteria;

1. Load level – The site supplies devices requiring minuscule loads consisting of:
 - a. Site load that is less than or equal to 400 watts for continuous loads. (i.e. approx 3,500 kWh/yr); or
 - b. Site load that is less than or equal to 850 watts using the assigned Unmetered Supplies & Public Lighting Profile. The controlled load equipment (i.e. PE Cell / Time Clock) must be maintained and controlled by Country Energy. (i.e. approx 3,500 kWh/yr); or
 - c. A combination of both continuous and controlled loads whose combined load is less than or equal to 3,500 kWh/yr.
2. The load must be permanently connected and have a quantifiable load pattern as per NEC Section 7.2.3.1 Notes 5 and 6.
3. The final decision on whether or not a site can be connected as an unmetered supply shall be at the discretion of Country Energy.

NETWORK PRICE LIST ENQUIRIES These can be directed to our Customer Service Centre, telephone 13 23 56.

Network Price List Explanatory Notes

Northern Region

Effective 1 July 2006

10. Applicability of Network Charges – Northern Region

10.1 Controlled Load

Controlled Load C applies where permanently connected appliances are controlled by Country Energy's equipment so that electricity is available for 14 to 18 hours per day on weekdays and all hours on weekends except where the load is controlled by a time clock. Country Energy reserves the right to vary these times to suit network conditions without affecting the customer's usage of the appliances. The load control receiver remains the property of Country Energy.

11. Definitions

Zone 1 Region C- Supply to this zone is covered by the following regional post codes.

Bulahdelah-2423, Maitland-2320, Nahiack-2312, Stroud Road-2415

NETWORK PRICE LIST ENQUIRIES These can be directed to our Customer Service Centre, telephone 13 23 56.

Network Price List Explanatory Notes

Southern Region

Effective 1 July 2006

CAPACITY CHARGE Capacity Charge is the highest half-hour kVA demand (rounded to the nearest whole kVA) in the preceding twelve months rounded up to 20, 40, 60, 80, 100, 150, 200, 300, 400, 500kVA and so on in 100kVA increments.

Tariff Code BLNN2SP is for SouthWest Zone 1 Rural Residential Customers - Supply to this zone includes the following regional towns. This Tariff is obsolete. New customers should be connected on tariff BLNN2AU.

12. Country Energy Far West Region Network Use of System Prices 2006/2007

The rates in this section are the rates charged to retailers of electricity for the use of Country Energy's Far West Region distribution system. These rates are inclusive of charges levied on Country Energy by transmission network service providers & government legislation. Country Energy is also required to contribute towards the newly legislated Energy Savings Fund which will be used to support energy saving initiatives across New South Wales. These contributions are included as part of the NUOS charges from 1 July 2006.

Tariff Code	D
Description:	Domestic
Type:	Residential
Urban/Non-urban	Urban
Location:	Country Energy Far West Region
Application:	Applicable to electricity consumed in premises wholly or principally used as private residences or flats in specified urban centres.
	Unit Rate
Network Access Charge \$ / Day	0.16374
Energy c/kWh All Periods	6.325

Tariff Code	GS
Description:	General Supply
Type:	Business
Urban/Non-urban	Both
Location:	Country Energy Far West Region
Application:	Applicable to electricity supply at low voltage in premises not eligible for Domestic, Rural, Special or Institution Tariffs.
	Unit Rate
Network Access Charge \$ / Day	0.31860
Energy c/kWh All Periods	9.319

Tariff Code	GSI (Obsolete)
Description:	General Supply Irrigation
Type:	Irrigation
Urban/Non-urban	Both
Location:	Country Energy Far West Region
Application:	This tariff is available to eligible irrigation consumers, [obsolete]
	Unit Rate
Network Access Charge \$ / Day	0.31860
Energy c/kWh All Periods	6.830

Tariff Code	OPR
Description:	Off Peak – Residential
Type:	Residential
Urban/Non-urban	Urban
Location:	Country Energy Far West Region
Application:	Applicable to electricity consumed by the following permanently connected appliances & equipment where separately metered supply is controlled by a load control switching device in premises wholly or principally used as private residences or flats in specified urban centres. 1. Approved storage type water heaters with a minimum tank capacity of 135 litres (30 gallons), or a rated hot water delivery of not less than 125 litres. 2. Approved storage type space heaters & concrete floor heating. Supply will be made available for 5 to 9 hours overnight on weekdays and all hours on weekends except where the load is controlled by a time clock. Note: This tariff is not available for the top boost element of a two element water heater for new connections.
	Unit Rate
Network Access Charge \$ / Day	0.02501
Energy c/kWh All Periods	1.338

Tariff Code	OPRE
Description:	Off Peak – Residential Extended
Type:	Residential
Urban/Non-urban	Urban
Location:	Country Energy Far West Region
Application:	Applicable to electricity consumed by the following permanently connected appliances & equipment where separately metered supply is controlled by a load control switching device in premises wholly or principally used as private residences or flats in specified urban centres. 1. Approved storage type water heaters with a minimum tank capacity of 135 litres (30 gallons), or a rated hot water delivery of not less than 125 litres. 2. Approved storage type space heaters & concrete floor heating. Supply will be made available for 5 to 9 hours overnight on weekdays, 2 to 4 hours during the day on weekdays and all hours on weekends except where the load is controlled by a time clock. Note: This tariff is not available for the top boost element of a two element water heater for new connections.
	Unit Rate
Network Access Charge \$ / Day	0.02692
Energy c/kWh All Periods	3.037

Tariff Code	OP
Description:	Off Peak – Tariff 1
Type:	Business
Urban/Non-urban	Both
Location:	Country Energy Far West Region
Application:	Applicable to electricity consumed by the following permanently connected appliances & equipment where a separately metered supply is controlled by a load control switching device in locations, not eligible for Off Peak Residential,. 1. Approved storage type water heaters with a minimum tank capacity of 135 litres (30 gallons), or a rated hot water delivery of not less than 125 litres. 2. Approved storage type space heaters & concrete floor heating. Supply will be made available for 5 to 9 hours overnight on weekdays and all hours on weekends except where the load is controlled by a time clock. Note: This tariff is not available for the top boost element of a two element water heater for new connections.
	Unit Rate
Network Access Charge \$ / Day	0.02680
Energy c/kWh All Periods	1.295

Tariff Code	OP2
Description:	Off Peak – Extended
Type:	Business
Urban/Non-urban	Both
Location:	Country Energy Far West Region
Application:	Applicable to electricity consumed by the following permanently connected appliances & equipment where a separately metered supply is controlled by a load control switching device in locations, not eligible for Off Peak Residential Extended,. 1. Approved storage type water heaters with a minimum tank capacity of 135 litres (30 gallons), or a rated hot water delivery of not less than 125 litres. 2. Approved storage type space heaters & concrete floor heating. Supply will be made available for 5 to 9 hours overnight on weekdays, 2 to 4 hours during the day on weekdays and all hours on weekends except where the load is controlled by a time clock. Note: This tariff is not available for the top boost element of a two element water heater for new connections.

Times for TOU calculations are based on EST without DST correction

PEAK time is 0700 - 0900 and 1700 - 2000 working weekdays

SHOULDER time is 0900 - 1700 and 2000 - 2200 working weekdays

OFF PEAK time is 0000 - 0700 and 2200 - 2400 working weekdays, plus weekends and public holidays

30 minute blocks are timed per hour and half hour on the meter clock

Maximum Demand (kVA) is the highest 30 minute block calculation per monthly settlement period of the vector sum of kW and kVAR, or, if unavailable, by the highest 30 minute block kVA information
