Glossary

Term	Definition
ACT	Australian Capital Territory
AEMC	Australian Energy Market Commission
AER	Australian Energy Regulator
c	cents
CNG	Compressed Natural Gas
CT	Current Transformer
Cu	copper
DPPC	Designated Pricing Proposal Charges
DUOS	Distribution Use of System
FiT	Feed-in Tariff
GST	Goods and Services Tax
HV	High Voltage
JS	Jurisdictional Schemes
kVA	kilovolt-ampere
kW	kilowatt
kWh	kilowatt hour
LRMC	long run marginal cost
LV	Low Voltage
LVABC	Low Voltage Aluminum Bundled Conductors
m	million
mm	millimeter
MW	megawatt
NMI	National Metering Identifier
NUOS	Network Use of System
POE	Point Of Entry
PTRM	Post tax revenue model
PV	photovoltaic
SLCC	Streetlight Control Cubicle
TAR	Total allowable revenue
TNSP	Transmission network service provider
TOU	Time of Use
TSS	Tariff Structure Statement
TUOS	Transmission Use of System
VT	Voltage Transformer
XMC	Excludes Metering Charge

Overview

- Electricity bills are made up of distribution costs (covering the poles and wires), transmission costs (covering the generators costs), ACT jurisdictional schemes,¹ metering costs, and the retailer's costs and margins (covering wholesale energy costs) as well as GST. This report covers only the network components (distribution, transmission, jurisdictional schemes and some metering costs).
- Evoenergy offers customers a range of network tariff options across three tariff classes—residential, commercial low voltage and commercial high voltage.
- In 2019/20, Evoenergy's second Tariff Structure Statement will be implemented². This includes the introduction of peak demand charges for kVA-based demand tariffs offered to commercial customers from 1 July 2019, as approved by the Australian Energy Regulator (AER)³.
- The 2019/20 tariffs and charges shown in this statement have been approved by the AER in its determination on Evoenergy's 2019/20 Network Pricing Proposal.⁴
- The network use of system (NUOS) charges for 2019/20 are, on average 8.95 cents per kilowatt-hour (kWh), which is 7.45 per cent higher in nominal terms than the average NUOS charges for 2018/19.
- 2019/20 network and metering charges will increase the electricity network bill for a typical ACT residential customer, consuming 7,500 kWh on the Residential Basic Network tariff, by about \$0.91 a week (excluding GST).
- 2019/20 network and metering charges will increase the electricity network bill for a typical ACT low voltage commercial customer, consuming 30 MWh on the General Network tariff, by about \$4.88 a week (excluding GST).

1 Introduction

1.1 Purpose and scope of the document

Evoenergy has prepared this Statement of Tariff Classes and Tariffs (hereafter ‘Statement’) in accordance with the requirements in chapter 6 of the National Electricity Rules (the Rules). Clause 6.18.9(a)(3) requires Evoenergy to maintain on its website: a statement of tariff classes⁵ and tariffs that are applicable to each class.

This Statement covers Evoenergy’s Standard Control Services and Alternative Control Services, as classified in the AER’s Final Decision Evoenergy Determination 2019–24 (Final Decision). Standard Control Services are services that are central to the electricity supply and therefore relied upon by most customers. This service classification includes network services (e.g. construction, maintenance and repair of the network), some connection services (e.g. small customer connections) and Type 7 metering services (i.e. unmetered connections such as traffic lights). Alternative Control Services include metering and ancillary network services specific to a particular customer. The Statement presents network prices from 1 July 2019 to 30 June 2020 that were approved by the AER on 4 June 2019.

This Statement should be read in conjunction with the following documents:

- The AER’s Final Decision 2019-24⁶ – April 2019
- Evoenergy’s Revised Annual Pricing Proposal⁷ – May 2019
- Evoenergy’s Revised Proposed Tariff Structure Statement⁸ – November 2018

These documents are published on the AER’s website, and set out in detail how the tariff structures and levels have been developed.

1.2 Structure of the document

Evoenergy’s tariff classes and structure are set out in chapter 2 along with approved 2019/20 charges for network services. The chapter also includes a comparison of the changes relative to 2018/19.

The structure and basis of Evoenergy’s charges for metering and ancillary network services are presented and explained in chapter 3.

Indicative NUOS tariffs for future regulatory years are provided in chapter 4.

⁵ A *tariff class* is defined in Chapter 10 of the *Network Electricity Rules* as “A class of retail customers for one or more direct control services who are subject to a particular tariff or particular tariffs.”

⁶ AER 2019, *Final Decision – Evoenergy Distribution Determination 2019 to 2024, Overview*, April 2019.

⁷ Evoenergy 2019, *2019/20 Annual Pricing Proposal*. <https://www.aer.gov.au/networks-pipelines/determinations-access-arrangements/pricing-proposals-tariffs/evoenergy-annual-pricing-2019-20>

⁸ Evoenergy 2018, *Revised Regulatory Proposal 2019–24*, Appendix 1.1 Revised Tariff Structure Statement – Explanatory Statement.

2 Tariffs classes and structure

The Rules (clause 6.18.9) require a description of the tariff classes⁹, and the tariffs that apply to each class in 2019/20, to be published on Evoenergy's website.

Evoenergy offers network tariffs in three tariff classes:

- residential;
- low voltage (LV) commercial; and
- high voltage (HV).

The Rules stipulate that tariff classes must be constituted with regard to the need to group customers together on an economically efficient basis and the need to avoid unnecessary transactions costs (clause 6.18.3(d)). Evoenergy meets this requirement by grouping customers according to type of connection (residential or commercial), and connection voltage (LV or HV). Customers within each class have similar load and connection characteristics. The relevant costs for each class can then be identified and reflected in the tariffs for each class.

Within each of the three tariff classes, Evoenergy has developed a suite of network tariffs that encourage efficient use of the network, signals the costs of future network expansion, and facilitate the integration of renewable technologies.

Each of the tariffs has been reviewed to base them on the long run marginal cost (LRMC) of the network (as per clause 6.18.5(f) of the Rules).

The tariffs, charging parameters and eligibility criteria for each tariff are shown in Table 2.1, Table 2.3 and Table 2.5.

The network tariffs from each tariff class comprise different combinations of the following charging parameters:

- **Fixed charges**—these apply per customer for residential customers and per connection point for commercial customers. The fixed charge is a daily charge that does not vary with electricity consumption, demand or capacity. The fixed charge excludes non-capital metering charges.
- **Energy charges**—these apply to each unit of electricity consumed. The cents per kilowatt hour (c/kWh) rate may vary with the level of consumption (with higher rates applying above certain thresholds) or with the time-of-use (with lower rates applying outside of peak periods).
- **Maximum demand charges**—these are a charge per unit of maximum demand (in c/kVA/day or c/kW/day¹⁰). The maximum demand is the highest demand calculated coincident over a 30-minute clocked interval, starting on the full or half hour, during the specified peak time within a billing period (generally per calendar month).
- **Capacity charges**—these are a charge per unit of maximum demand (in c/kVA/day). The maximum demand is the highest demand recorded over a 30-minute clocked interval during the previous 13 months inclusive of the current billing month.

The tariffs and charging parameters for each tariff class are shown in Table 2.1, 2.3 and 2.5. The tables include an explanation of the purpose of each tariff and the customers to which each tariff may apply.

⁹ A tariff class is defined in chapter 10 of the *National Electricity Rules* as “A class of retail customers for one or more direct control services who are subject to a particular tariff or particular tariffs.”

¹⁰ c/kVA/day refers to cents per kilo-volt ampere per day, and c/kW/day refers to cents per kilowatt per day

2.1 Network tariffs for residential customers

Residential tariffs are available to installations at private dwellings, excluding serviced apartments, but including:

- living quarters for members and staff of religious orders;
- living quarters on farms;
- charitable homes;
- retirement villages;
- residential sections of nursing homes and hospitals;
- churches, buildings or premises which are primarily used for public worship; and
- approved caravan sites.

Evoenergy's residential customers are currently assigned to the following tariffs:

- **Residential kW Demand** – default for new connections and meter replacements from 1/12/17. (See Section 3.1.1 for more details.)
- **Residential TOU** – opt-out option for new connections and meter replacements from 1/12/17.
- **Residential Basic** – closed to new connections from 1/12/17. Remains available to existing customers
- **Residential 5000** – closed to new connections from 1/12/17. Remains available to existing customers.
- **Residential with Heat Pump** – closed to new connections from 1/12/17. Remains available to existing customers.
- **Off-peak (1) night** – available to residential (and LV commercial) customers utilising controlled loads elements.
- **Off-peak (3) day and night** – available to residential customers utilising controlled loads elements.

The two residential tariffs offered to new connections and customers with meter replacements are described below.

The Residential kW demand tariff gives residential customers the opportunity to actively manage and control the size of the network component of their electricity bills by considering when and how they use electricity.¹¹ The demand tariff includes the following three components:

- A fixed component in cents per day.
- An anytime energy consumption component in cents per kilowatt-hour.
- A demand component - a maximum demand charge is based on the customer's highest demand (measured in kilowatts) calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified peak time (i.e. 5:00pm¹², 5:30pm, 6:00pm, 6:30pm, 7:00pm, 7:30pm and 8:00pm) within the billing period (a calendar month). The charge is expressed in cents per kilowatt per day.

The Residential time-of-use (TOU) tariff provides an opportunity and an incentive for consumers with the necessary metering capability to respond to price signals at different times of the day¹³

¹¹ This statement assumes the retailer preserves the network tariff structure.

¹² The first period starts at 17:00:01 and ends at 17:30:00 AEST.

¹³ This statement assumes the retailer preserves the network tariff structure.

and manage their electricity bill. The Residential TOU tariff was the default tariff for all new residential connections from 1 October 2010 to 30 November 2017.

Evoenergy's residential network tariff structure is shown in Table 2.1.

Table 2.1 Network tariff structure: residential

Tariff	Charging parameters	Explanation
Residential basic network (010)	- Fixed charge (c/day/customer) - Energy charge (c/kWh)	This tariff is available to customers who have an accumulation meter installed at their premises. The fixed charge applies per customer, is a daily charge and does not vary with usage. The energy charge varies with the level of consumption but not with the time of day. This tariff was closed to new customers from 1 December 2017 and will become obsolete over time.
Residential time-of-use (TOU) network (015)	- Fixed charge (c/day/customer) - Energy at max times, i.e. 7 am to 9 am and 5 pm to 8 pm every day (c/kWh)* - Energy at mid times, i.e. 9 am to 5 pm and 8 pm to 10 pm every day (c/kWh)* - Energy at economy times, i.e. all other times (c/kWh)*	This tariff is available to residential customers who have a meter capable of recording energy consumption in each of the three time of use intervals ('max', 'mid' and 'economy'). The fixed charge applies per customer, is a daily charge and does not vary with usage. The energy charges relate to the supply of network services at various times. Higher rates apply at max times to encourage users to shift their load to mid or economy periods or reduce their load during max times.
Residential 5000 network (020)	- Fixed charge (c/day/customer) - Energy for the first 60 kWh/day (c/kWh) - Energy above 60 kWh/day (c/kWh)	This tariff is designed for residential customers who have large continuous (rather than time controlled) loads, and consume over 5,000 kWh per annum. The fixed charge applies per customer, is a daily charge and does not vary with usage. An inclining block structure applies to energy charges (i.e. higher energy rates for the second block of energy). This tariff was closed to new customers from 1 December 2017 and will become obsolete over time.
Residential with heat pump (030)	- Fixed charge (c/day/customer) - Energy for the first 165 kWh/day (c/kWh) - Energy above 165 kWh (c/kWh)	This tariff is only available to residential customers with a reverse cycle air conditioner. The fixed charge applies per customer, is a daily charge and does not vary with usage. An inclining block structure applies to energy charges (i.e. higher energy rates for the second block of energy). This tariff was closed to new customers from 1 December 2017 and will become obsolete over time.

Tariff	Charging parameters	Explanation
Residential kW demand (025)	- Fixed charge (c/day/customer) - Energy consumption charge (c/kWh) - Maximum demand charge (in billing period) (c/kW/day)	This tariff is available to residential customers from 1 December 2017 who have a Type 4 meter installed. The fixed charge applies per customer, is a daily charge and does not vary with usage. The energy charge varies neither with the level of consumption nor the time of day. The demand charge is applied to a customer's highest demand (measured in kilowatts) calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified Peak time* (i.e. 5:00pm**, 5:30pm, 6:00pm, 6:30pm, 7:00pm, 7:30pm and 8:00pm) within the billing period (generally a calendar month) and the number of days in the billing period. This tariff became Evoenergy's default tariff for residential customers with a Type 4 meter from 1 December 2017.
Off-peak (1) night network (060)	Energy at controlled times, i.e. between 10 pm and 7 am (c/kWh)*	The Off-peak (1) night tariff is a supplementary tariff available only to consumers utilising a controlled load element, and (from 1 July 2019) taking all other energy on the Residential kW Demand, Residential TOU, Residential Basic, General Network, General TOU or LV commercial kW Demand network tariff. The Off-peak (1) night network energy charge relates to supply of network services at controlled times, for 6 to 8 hours per day between the hours of 10 pm and 7 am. This charge is applicable to permanent heat (or cold) storage, electric vehicle recharge, and CNG vehicle gas compression installations. The design and rating must be acceptable to Evoenergy. The installation must use most energy during the controlled times but may be boosted at the principal charge, or charges, at other times.
Off-peak (3) day and night network (070)	Energy at controlled times, i.e. between 10 pm and 7 am and 9 am and 5 pm (c/kWh)*	The Off-peak (3) day and night tariff is a supplementary tariff available only to consumers utilising a controlled load element, and taking all other energy on the Residential kW Demand, Residential TOU or Residential basic network tariff. This tariff will be closed to new commercial connections from 1 July 2019. The Off-peak (3) day and night network energy charge relates to supply of network services at controlled times, for up to 13 hours per day between 10 pm and 7 am and again between 9 am and 5 pm. This charge is applicable to permanent heat (or cold) storage, electric vehicle recharge; and CNG vehicle gas compression installations. The design and rating must be acceptable to Evoenergy. The installation must use most energy during the controlled times but may be boosted at the principal charge, or charges, at other times.
Renewable energy generation	Energy charges (c/kWh)	This tariff applies to customers with grid connected solar or wind energy generation systems. Different arrangements apply to customers participating in the ACT feed-in tariff scheme, in accordance with the <i>Electricity Feed-in (Renewable Energy Premium) Act 2008</i> (ACT). Net metering applies to new PV customers since July 2013.

* Max times are 7 am to 9 am and 5pm to 8pm Australian Eastern Standard Time on every day. Mid times are between 9 am and 5 pm Australian Eastern Standard Time every day. Off-peak times are all other times. Peak times (for the Residential kW demand tariff) is from 5 pm to 8 pm every day.

** The first period starts at 17:00:01 and ends at 17:30:00 AEST.

2.1.1 Residential tariff assignment policy

The Residential kW Demand tariff was introduced to coincide with the introduction of Type 4 meters from 1 December 2017. Only customers who have a Type 4 meter installed from 1 December 2017 are assigned, by default, to the kW Demand tariff.

New residential customers are currently assigned by default to the Residential kW Demand tariff, with the ability to opt-out to the Residential Time-of-Use (TOU) tariff. The Residential TOU tariff was the default tariff for all new residential customers from 1 October 2010 to 30 November 2017.

Customers on the Residential kW Demand or TOU tariffs are also able to opt-in to one of the off-peak tariffs (off-peak 1 and off-peak 3). The Off-peak tariffs (codes 060 and 070) apply to controlled loads to encourage electricity usage at off-peak times.

From 1 December 2017, the Residential Basic, Residential 5000, and Residential with Heat Pump tariffs were closed to new Evoenergy customers because these tariffs were not sufficiently cost reflective. Customers currently assigned to these tariffs may remain on them until they receive a Type 4 meter. Evoenergy's assignment policy means that because customers with a Type 4 meter are automatically assigned to the demand tariff (with a provision to opt out to TOU), the above three residential tariffs will eventually become obsolete. The table below outlines the residential tariff assignment policy.

Table 2.2 Residential tariff assignment policy

	Default	Opt-out	Opt-in
Residential (new connection or customer initiated)	Residential kW demand*	Residential Time-of-Use	
Residential: replacement meter	Residential kW demand tariff 12 months after type 4 meter is installed	Residential Time-of-Use	Residential kW demand or Residential Time-of-Use tariff (any time after type 4 meter is installed)

Note: Customers are ineligible to switch to one of these tariffs if they have been on the tariff in the previous 12 months.

*When requested by retailers, under specific scenarios, Evoenergy currently offers to backdate a demand tariff to a TOU tariff once per site in a 12-month period. Evoenergy reverses and reissues the bill (NUOS) for no more than 120 calendar days for residential sites. This process applies to the Residential kW demand tariff.

As explained in the AER's Draft Decision for 2019–24, customers who receive a Type 4 meter as a replacement for a Type 5 or 6 meter are to remain on their existing network tariff for 12 months before moving to a more cost-reflective network tariff¹⁴. Under this arrangement, customers with new connections or customer-initiated meter replacements will continue to be assigned to the cost-reflective Residential kW demand tariff when their type 4 meter is installed (with the option to opt-out to the Residential TOU tariff). When a new meter is installed for any other reason, the shift to a more cost reflective tariff (i.e. the Residential kW demand tariff) will be delayed by 12 months. These customers are able to opt-in to more cost reflective residential tariffs within the first 12 months of their type 4 meter installation. This change in requirements is reflected in Evoenergy's Revised TSS, which was approved in the AER's Final Decision.¹⁵

¹⁴ AER 2018, *Draft Decision - Evoenergy Distribution Determination 2019 to 2024, Attachment 18*, September 2018, p. 18-17 to 18-18.

¹⁵ AER 2019, *Final Decision – Evoenergy Distribution Determination 2019 to 2024, Overview*, April 2019, page 56.

2.2 Network tariffs for low voltage commercial customers

For LV commercial customers, a range of tariff options has been developed to meet their diverse needs. Evoenergy's low voltage commercial customers are currently assigned to the following tariffs.

- LV kW Demand
- LV TOU kVA Demand
- LV TOU kVA Capacity
- General TOU
- General Network

Three of the LV commercial options involve capacity and/or maximum demand charges, in conjunction with consumption charges. These tariff options are described below.

The LV kW Demand tariff was introduced in December 2017 and gives LV commercial customers the opportunity to actively manage and control the size of the network component of their electricity bills by considering when and how they use electricity¹⁶. The LV kW Demand tariff includes the following three components:

- A fixed component in cents per day.
- An anytime energy consumption component in cents per kilowatt hour.
- A demand component – a maximum demand charge is based on the customer's highest demand calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified Business time (i.e. 7:00am¹⁷, 7:30am, 8:00am, 8:30am, etc. up to 5:00pm), within the billing period (generally a calendar month).

The kVA-based demand tariffs (LV TOU kVA Demand and LV TOU Capacity) will change from 1 July 2019. As approved by the AER in its Final Decision on Evoenergy's Revised TSS¹⁸ the maximum demand component of the LV TOU kVA Demand and LV TOU Capacity tariffs will change from being based on 'anytime' maximum demand to 'peak-period' maximum demand. The peak period for these LV Commercial tariffs is the Business Time, specified as 7:00am to 5:00pm (AEST) on weekdays.

The General TOU tariff provides an opportunity and an incentive for consumers with the necessary metering capability to respond to price signals at different times of the day¹⁹ and manage their electricity bill in line with the costs they impose on the network.

Evoenergy's LV commercial network tariff structure is shown in Table 2.3.

¹⁶ This statement assumes the retailer preserves on the network tariff structure.

¹⁷ The first period starts at 07:00:01 and ends at 07:30:00 AEST.

¹⁸ AER 2019, *Final Decision – Evoenergy Distribution Determination 2019 to 2024, Overview*, April 2019, page 56.

¹⁹ This statement assumes the retailer preserves on the network tariff structure.

Table 2.3 Network tariff structure: LV commercial

Tariff	Charging parameters	Explanation
General network (040)	- Network access charge (c/day/connection point) - Energy for the first 330 kWh/day (c/kWh) - Energy above 330 kWh/day (c/kWh)	This tariff has been closed to new connections since 1 December 2017 and will become obsolete over time. The fixed charge applies per connection point, is a daily charge and does not vary with usage. An inclining block structure applies to energy charges (i.e. higher energy rates for the second block of energy). This tariff may be used in conjunction with the off-peak (1) tariff (code 060).
General TOU network (090)	- Network access charge (c/day/connection point) - Energy at business times* (c/kWh) - Energy at evening times* (c/kWh) - Energy at off-peak times* (c/kWh)	This tariff was the default tariff available to new LV commercial customers until 30 November 2017. It is now available for all LV commercial customers as an opt-out option. The fixed charge applies per connection point, is a daily charge and does not vary with usage. The energy charges relate to supply of energy at different times, with lower rates in off-peak times reflecting the availability of capacity and encouraging consumers to shift their load from 'business' to 'off-peak times' to utilise the available capacity.
LV TOU kVA demand network (101)	- Network access charge (c/day/connection point) - Maximum demand (in billing period) (c/kVA/day) - Energy at business times* (c/kWh) - Energy at evening times* (c/kWh) - Energy at off-peak times* (c/kWh)	This tariff is the default tariff available to new LV commercial customers who have a Type 4 meter installed as well as a current transformer (CT) meter. The fixed charge applies per connection point, is a daily charge and does not vary with usage. The maximum demand charge is applied to a customer's highest demand (measured in kVA) calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified business times (i.e. 7:00am**, 7:30am, 8:00am, 8:30am, etc. up to 5:00pm), within the billing period (generally a calendar month) and the number of days in the billing period. The energy charges relate to supply of energy at different times, with lower rates in off-peak times reflecting the availability of capacity and encouraging consumers to shift their load from peak to off-peak times to utilise the available capacity.
LV TOU capacity network (103)	- Network access charge (c/day/connection point) - Maximum demand (in billing period) (c/kVA/day) - Capacity (max demand in last year) (c/kVA/day) - Energy at business times* (c/kWh) - Energy at evening times* (c/kWh) - Energy at off-peak times* (c/kWh)	This tariff is available to customers with an interval meter and a current transformer (CT) meter installed. The fixed charge applies per connection point, is a daily charge and does not vary with usage. The maximum demand charge is applied to a customer's highest demand (measured in kVA) calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified business times (i.e. 7:00am**, 7:30am, 8:00am, 8:30am, etc. up to 5:00pm), within the billing period (generally a calendar month) and the number of days in the billing period. The capacity charge is applied to a customer's maximum half hourly demand over the previous 13 months inclusive of the current billing month. The energy charges relate to supply of energy at different times, with lower rates in off-peak times reflecting the availability of capacity and encouraging consumers to shift their load from peak to off-peak times to utilise the available capacity.

Tariff	Charging parameters	Explanation
LV kW Demand network (106)	• Network access charge (c/day/connection point) • Energy charge (c/kWh) • Maximum demand (in billing period) (c/kW/day)	This tariff is the default tariff available to new LV commercial customers from 1 December 2017 who have a Type 4 meter installed without a CT meter. The fixed charge applies per connection point, is a daily charge and does not vary with usage. The energy charge varies with the level of consumption but not the time of day. The maximum demand charge is applied to a customer's highest demand (measured in kW) calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified business times* (i.e. 7:00am**, 7:30am, 8:00am, 8:30am, etc. up to 5:00pm), within the billing period (generally a calendar month) and the number of days in the billing period
Streetlighting (080)	• Network access charge (c/day/customer) • Energy at any time (c/kWh)	This tariff applies to the night-time lighting of streets and public ways and places. The fixed charge applies per customer, is a daily charge and does not vary with usage. The energy charge varies with the level of consumption but not the time of day.
Small unmetered loads (135)	• Network access charge (c/day/customer) • Energy at any time (c/kWh)	This tariff applies to eligible installations as determined by Evoenergy, including: • telephone boxes; • telecommunication devices; and • other, as determined by the National Metrology Coordinator. Energy charges are calculated based on the assessed rating of the load and the charge period.

* Business times are between 7 am and 5 pm Australian Eastern Standard Time on weekdays. Evening times are between 5 pm and 10 pm Australian Eastern Standard Time on weekdays. Off-peak times are all other times.

** The first period starts at 07:00:01 and ends at 07:30:00 AEST.

2.2.1 Low voltage commercial tariff assignment policy

Refinements to the LV commercial tariff assignment policy will be implemented from 1 July 2019. Specifically, customers with Current Transformer (CT) meters will be assigned by default to the LV kVA TOU demand tariff, while customers without a CT meter (i.e. with a Whole Current meter) meter will be assigned by default to the LV kW demand tariff. Both customer types (those with and without CT meters) will have cost reflective opt-out options, as shown in Table 2.4 below.

The LV kW demand tariff is designed for smaller commercial customers (i.e. customers who generally do not have CT meters) who share common assets. These customers tend to have peakier loads than large commercial customers. The LV kW demand tariff is better suited to small commercial customers.

LV commercial customers without Type 4 meters will remain on their existing tariff until their meter is changed to a Type 4 meter. The General Network tariff was closed to new connections from 1 December 2017 and will eventually become obsolete as customers receive Type 4 meters and are placed onto more cost-reflective tariffs.

For completeness, Table 2.4 shows Evoenergy's commercial tariff assignment policy.

The exception to the above assignment policy is for small unmetered loads (code 135) and streetlighting (code 080). These tariffs do not vary with usage, or load profile, and therefore there is no need to transition these loads onto a demand tariff.

Table 2.4 Commercial tariff assignment policy

	Default	Opt-out
LV commercial without a CT meter	LV kW Demand*	1. LV kVA TOU Demand 2. LV kVA TOU Capacity 3. General TOU
LV commercial with a CT meter	LV kVA TOU Demand	1. LV TOU kVA Capacity 2. General TOU
HV commercial	HV TOU Demand (code 122)	Not applicable (mandatory default)

Notes: From 1 July 2019, LV commercial customers with a replacement meter will remain on their existing network tariff until 12 months after their smart meter is installed, however they can opt-in to a cost reflective LV commercial tariffs according to the assignment policy shown in the table above. Customers are ineligible to switch to one of these tariffs if they have been on the tariff in the previous 12 months.

*When requested by retailers, under specific scenarios, Evoenergy currently offers to backdate a demand tariff to a TOU tariff once per site in a 12-month period. Evoenergy reverses and reissues the bill (NUOS) for no more than 40 calendar days for commercial sites. This process applies to the LV kW demand tariff.

As explained in the AER's Draft Decision for 2019–24, customers who receive a Type 4 meter as a replacement for a Type 5 or 6 meter are to remain on their existing network tariff for 12 months before moving to a more cost-reflective network tariff²⁰. Under this arrangement, customers with new connections or customer-initiated meter replacements will continue to be assigned to cost-reflective tariffs when their type 4 meter is installed (with the option to opt-out, as per the table above). When a new meter is installed for any other reason, the shift to a more cost reflective tariff (i.e. the default tariff option listed in Table 2.4) will be delayed by 12 months. These customers are able to opt-in to more cost reflective LV commercial tariffs (as per the tariff assignment policy in Table 2.4) within the first 12 months of their type 4 meter installation. This change in requirements is reflected in Evoenergy's Revised TSS, which was approved in the AER's Final Decision²¹.

As per Evoenergy's Revised TSS, which was approved by the AER in its Final Decision²², there is also a change to tariff assignment related to the Off-peak (3) tariff (code 070). Specifically, this tariff is obsolete to new commercial connections from 1 July 2019.

2.3 Network tariffs for high voltage customers

To qualify for the High Voltage tariffs, customers must take energy at high voltage (nominal voltage not less than 11 kV).

The structure of the demand charges within these HV tariffs will change from 1 July 2019. As approved by the AER in its Final Decision on Evoenergy's Revised TSS²³, the maximum demand charge of these tariffs will change from being based on 'anytime' maximum demand to 'peak-period' maximum demand. The peak period for these HV Commercial tariffs is the Business Time, specified as 7:00am²⁴ to 5:00pm on weekdays.

²³ Ibid

²⁴ The first period starts at 07:00:01 and ends at 07:30:00 AEST.

Evoenergy's High Voltage network tariff structure is shown in Table 2.5.

Table 2.5 Network tariff structure: HV commercial

Tariff	Charging parameters	Explanation
HV TOU Demand Network (111)	• Network access charge (c/day/connection point) • Max demand (in billing period) (c/kVA/day) • Capacity (max demand in past year) (c/kVA/day) • Energy at business times* (c/kWh) • Energy at evening times* (c/kWh) • Energy at off-peak times* (c/kWh)	This tariff is appropriate for large customers taking supply at high voltage with a LV network owned and maintained by Evoenergy. The network access charge relates to the connection services provided to the customer. The maximum demand charge will be based on the highest demand (measured in kVA) calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified business times (i.e. 7:00am**, 7:30am, 8:00am, 8:30am, etc. up to 5:00pm), within the billing period (generally a calendar month). The capacity charge is based on a customer's maximum half hourly demand over the previous 13 months inclusive of the current billing month. The energy charges relate to supply of network services at different times, with lower rates at off-peak times reflecting the relatively lower costs of off-peak supply, and thereby providing incentives for customers to switch their utilisation of the network to off-peak periods. This tariff will be closed to new connections from 1 July 2019.
HV TOU Demand Network – Customer LV (121)	• Network access charge (c/day/connection point) • Max demand (in billing period) (c/kVA/day) • Capacity (max demand in past year) (c/kVA/day) • Energy at business times* (c/kWh) • Energy at evening times* (c/kWh) • Energy at off-peak times* (c/kWh)	This network tariff is appropriate for large customers taking supply at high voltage where the customer owns and is fully responsible for their own LV network. The network access charge relates to the connection services provided to the customer. The maximum demand charge will be based on the highest demand (measured in kVA) calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified business times (i.e. 7:00am**, 7:30am, 8:00am, 8:30am, etc. up to 5:00pm), within the billing period (generally a calendar month). The capacity charge is based on a customer's maximum half hourly demand over the previous 13 months inclusive of the current billing month. The energy charges relate to supply of network services at different times, with lower rates at off-peak times reflecting the relatively lower costs of off-peak supply, and thereby providing incentives for customers to switch their utilisation of the network to off-peak periods. This tariff will be closed to new connections from 1 July 2019.

Tariff	Charging parameters	Explanation
HV TOU Demand Network – Customer HV and LV (122)	• Network access charge (c/day/connection point) • Max demand (in billing period) (c/kVA/day) • Capacity (max demand in past year) (c/kVA/day) • Energy at business times* (c/kWh) • Energy at evening times* (c/kWh) • Energy at off-peak times* (c/kWh)	This network tariff is appropriate for large customers taking supply at high voltage where the customer owns and is fully responsible for their own LV network and where the customer owns and is responsible for their HV assets (including transformers and switch gear). The network access charge relates to the connection services provided to the customer. The maximum demand charge will be based on the highest demand (measured in kVA) calculated over a 30-minute clocked interval, starting on the full or half hour, during the specified business times (i.e. 7:00am**, 7:30am, 8:00am, 8:30am, etc. up to 5:00pm), within the billing period (generally a calendar month). The capacity charge is based on a customer's maximum half hourly demand over the previous 13 months inclusive of the current billing month. The energy charges relate to supply of network services at different times, with lower rates at off-peak times reflecting the relatively lower costs of off-peak supply, and thereby providing incentives for customers to switch their utilisation of the network to off-peak periods.

* Business times are between 7 am and 5 pm Australian Eastern Standard Time on weekdays. Evening times are between 5 pm and 10 pm Australian Eastern Standard Time on weekdays. Off-peak times are all other times.

** The first period starts at 07:00:01 and ends at 07:30:00 AEST.

2.3.1 High voltage tariff assignment policy

As per Evoenergy's Revised TSS, which was approved by the AER in its Final Decision²⁵, all new High Voltage customers will be assigned by default to Tariff 122 (HV TOU Demand Network – Customer HV and LV) from 1 July 2019. On this tariff, the customer owns and is responsible for LV and HV assets at their premises that are beyond the connection point to the network.

From 1 July 2019, Tariff 111 and Tariff 121 will be closed to new connections. However, existing customers assigned to these tariffs may remain on them or switch to Tariff 122 following consultation with Evoenergy.

2.4 Network charges for 2019/20

Evoenergy's network charges for 2019/20 are made up of distribution charges, transmission charges, jurisdictional scheme charges and metering charges²⁶.

- The distribution (DUOS) charges recover the cost of Evoenergy's electricity distribution service within the ACT.
- The transmission (TUOS) charges recover TransGrid's charges to Evoenergy for the delivery of energy to the ACT and most of Evoenergy's costs for sub-transmission services.
- Jurisdictional schemes (JS) charges include the ACT feed-in tariff, the Utilities Network Facilities Tax and the Energy Industry Levy.

²⁵ Ibid.

²⁶ Metering charges are discussed in Chapter 3.

The AER regulates both Evoenergy's distribution charges and TransGrid's transmission charges. The National Electricity Rules (NER) also provide that Evoenergy is to recover the cost of jurisdictional schemes.

Table 2.6 shows the AER approved distribution, transmission, jurisdictional scheme and metering charges for 2019/20, excluding GST.

2.5 Changes in network charges in 2019/20

Table 2.7 compares Evoenergy's approved 2019/20 NUOS tariffs with actual NUOS tariffs for 2018/19 and Evoenergy's indicative NUOS tariffs for 2019/20 (as set out in Evoenergy's revised TSS).²⁷ These NUOS tariff charges exclude metering charges.

The increase in NUOS tariffs between 2018/19 and 2019/20 reflects an increase in the total NUOS revenue requirement between 2018/19 and 2019/20, driven largely by an increase in jurisdictional scheme revenue.

Table 2.7 2018/19 and 2019/20 NUOS tariffs, excluding metering (nominal)

Description	Unit	NUOS 2018/19	NUOS 2019/20	Change (units)	Change (%)

3 Charges for alternative control services

Evoenergy's Alternative Control Services comprise Type 5 and Type 6 metering services, ancillary services and quoted services. Metering charges are set out in section 3.1 followed by ancillary service charges in section 3.2.

3.1 The structure and basis of Evoenergy's metering charges

There are two types of Evoenergy metering service charges, as per the AER's Final Decision for the 2019–24 regulatory control period.²⁸

- Capital charge — metering asset base recovery. This is applied to customers who were connected prior to 1 July 2015.
- Non-capital charge — operating expenditure and tax. This is applied to customers connected prior to 1 July 2015 and also to those with new connections from 1 July 2015 that have paid in full for their meters. This charge continues to apply until a customer's meter is replaced with an unregulated type 4 meter (from 1 December 2017).

Both of these charges are a fixed charge in cents per day – the charge does not vary with electricity consumption or demand.

For meters installed before 1 July 2015, Evoenergy paid upfront for the capital costs of the meters which were then added to the regulated asset base and recovered gradually, over the life of the meter, through annual charges. These charges will continue until the value of Evoenergy's metering Regulated Asset Base has fallen to a value of zero.

The capital cost of regulated meters installed between 1 July 2015 and 31 March 2018²⁹ was paid by consumers upon installation, and as a result these customers do not pay ongoing metering capital charges to Evoenergy. Evoenergy and retailers are able to identify, through the network billing system, which customers have paid for their meters upfront and are therefore not liable for the metering capital charge.

No new network connections from 1 December 2017 with an unregulated Type 4 meter pay metering capital charges to Evoenergy. These customers instead pay unregulated metering coordinator charges to their retailer.

Non-capital charges are paid by all customers with a regulated Type 5 or Type 6 meter installed. Non-capital charges cover ongoing operational costs such as meter reading and data processing.

In accordance with the Metering Rule Change³⁰, Type 4 meters became the standard electricity meter in the ACT for new connections and meter replacements from 1 December 2017³¹. This change affects the regulated metering charges applied to customers with Type 4 meters installed from 1 December 2017.

The application of metering charges is shown in Table 3.1.

²⁸ AER 2019, *Final Decision – Evoenergy Distribution Determination 2019 to 2024, Attachment 15: Alternative Control Services*, April 2019, page 15-22.

²⁹ The final day Evoenergy was permitted to install meters under transitional arrangements.

³⁰ AEMC 2015, *National Electricity Amendment (Expanding competition in metering and related services) Rule 2015*, 26 November 2015.

³¹ Evoenergy were permitted to continue installing Type 5 and Type 6 meters until 31 March 2018, at premises where a service order had been received prior to 1 December 2017.

Table 3.1 Application of metering charges

Type of customer	Pays Evoenergy ongoing metering capital charge	Paid Evoenergy upfront metering capital charge	Metering capital charge excluded from tariff*	Pays Evoenergy ongoing metering non-capital charge
• Meter installed before 1/7/15 • Evoenergy continues to provide metering services	Yes	No	No	Yes
• Meter installed before 1/7/15 • Customer requested new meter (e.g., for PV system) • Evoenergy installed new meter (before 1/12/17) • Evoenergy continues to provide metering services	Yes	Yes	No	Yes
• Meter installed before 1/7/15 • Customer requested new meter (e.g., for PV system) • Evoenergy installed new meter (before 1/12/17) • Customer switches to another metering provider after 1/12/17	Yes	Yes	No	No
• New meter (not a replacement) installed between 1/7/15 and 1/12/17 • Evoenergy continues to provide metering services	No	Yes	Yes	Yes
• Meter is replaced (in accordance with law) between 1/7/15 and 1/12/17 • Evoenergy continues to provide metering services	Yes	No	No	Yes
• Meter installed before 1/7/15 • Meter is replaced (in accordance with law) after 1/12/17 by Metering Coordinator • Evoenergy does not provide metering services after meter is replaced	Yes	No	No	No
• New connection between 1/7/15 and 1/12/17 • Meter is replaced (in accordance with the law) after 1/12/17 by Metering Coordinator (not Evoenergy) • Evoenergy does not provide metering services after meter is replaced	No	Yes	Yes	No
• New connection from 1/12/17 • Evoenergy does not install the new meter • Evoenergy does not provide metering services	No	No	Yes	No

*Customers with metering capital excluded from their tariff are on XMC tariffs.

The small unmetered loads tariff does not include metering charges because Evoenergy has not connected meters to these loads. Also, the off-peak network tariffs do not include metering charges because the metering charges are associated with the customer's primary tariff, not the supplementary off-peak tariff. Furthermore, high voltage network tariffs exclude metering charges as Evoenergy has not provided manually read meters to these customers since they are required to use remotely read (types 1- 4) meters.

The AER set caps for the annual metering capital and non-capital charges in its Final Decision for the 2019–24 regulatory control period.³² These price caps are shown in Table 3.2 and 3.3 for metering non-capital and metering capital, respectively. Table 2.6 shows the 2019/20 NUOS tariff charges including metering charges.

3.1.1 Metering non-capital charges for 2019/20

Evoenergy recovers metering non-capital charges from all customers with a Type 5 or Type 6 meter installed. A schedule of these fees is set out in Table 3.2. Evoenergy's schedule of metering non-capital charges comprises five separate charges. The charge applied to a customer depends on whether they have a basic or interval meter, and whether the meter is read monthly or quarterly.

Table 3.2 Metering non-capital charges, 2019/20

Code	Description	Unit	GST exclusive price	GST inclusive price
MP1	Quarterly metering non-capital rate	c/day/NMI	4.44	4.88
MP2	Monthly non-interval metering non-capital rate	c/day/NMI	7.77	8.55
MP3	Monthly interval metering non-capital rate	c/day/NMI	7.77	8.55
MP4	Monthly manually-read interval metering non-capital rate	c/day/NMI	63.00	69.30
MP6	Quarterly manually-read interval metering non-capital rate	c/day/NMI	17.90	19.69

3.1.2 Metering capital charges for 2019/20

Evoenergy recovers metering capital charges from customers with a Type 5 or Type 6 meter that was installed before 1 July 2015, through ongoing metering capital charges. A schedule of these fees is set out in Table 3.3. Evoenergy's schedule of metering capital charges comprises four separate charges. The charge applied to a customer depends on whether they have a basic or interval meter, and whether the meter is read monthly or quarterly.

The relatively large increase in metering capital charges in 2019/20 reflects the AER's final decision on the remittal for the 2014–19 regulatory period, in relation to the calculation of Evoenergy's metering revenue allowance.³³

Table 3.3 Metering capital charges, 2019/20

Code	Description	Unit	GST exclusive price	GST inclusive price
MP7	Quarterly manually-read interval metering capital rate	c/day/NMI	9.02	9.92
MP8	Monthly non-interval metering capital rate	c/day/NMI	15.77	17.35
MP9	Monthly multi-register non-interval metering capital rate	c/day/NMI	15.77	17.35
MP10	Monthly manually-read interval metering capital rate	c/day/NMI	127.30	140.03

³² AER 2019, *Evoenergy 2019–24 – Final Decision – Ancillary services cost build-up*, April 2019.

³³ AER 2018, *Evoenergy 2014–19 electricity distribution determination, Final Decision*, November, p34-35

3.2 Ancillary services

Charges for fee-based services are typically set by the AER to reflect the cost of providing the service. Table 3.4. shows the price cap charges for fee-based services in 2019/20 in accordance with the AER's Final Decision.³⁴

Table 3.4 Fee-based ancillary services charges, 2019/20

668	Holec Fuse Kit Installation for Termination of Consumer Mains - After Hours	per installation	\$356.57	\$392.23

Notes to Table 3.1

- * These charges also apply where Evoenergy responds to a customer initiated call out and determines that the premise is energised at the connection point.
- 1 Includes termination of temporary supply consumer mains. Crimp Lugs to be supplied by Customer/Applicant. Charges includes disconnection of existing temporary consumer mains if present.
- 2 Includes establishment of temporary earthing to overhead network and includes plant as required
- 3 Excludes the type of work done by supply and installation officer. Excludes streetlight controller isolation work by Connection and Installation (C & I) Officer or Services and Installation (S & I) Officer
- 4 Includes insulation testing of isolated HV cable prior re-energisation
- 5 Includes plant operator as required however temporary network isolation charges to apply separately.

Following the submission of the Revised Regulatory Proposal in November 2018, Evoenergy identified two of the proposed ancillary service charges had been assigned a billing code that conflicted with a service already assigned in the billing system. Specifically, in the Revised Regulatory Proposal, Evoenergy assigned the following codes.

- 601 – Contract Administration, Commissioning and Testing – Embedded Generation Installations up to 5MW
- 602 – Provision of Data for Network Technical Study – Embedded Generation Installations over 5MW

This was an error, as codes 601 and 602 are currently in use in the billing system as tariff codes for customers assigned to the ACT Government's now-closed Premium FiT arrangements. As a result, Evoenergy has re-assigned the above two services to codes 669 and 670, respectively, as shown in Table 3.5.

Table 3.5 Change to codes

Code description	Code assignment – Revised Regulatory Proposal	Code assignment – 2019/20 Pricing Proposal
Contract Administration, Commissioning and Testing - Embedded Generation Installations up to 5MW	601	669
Provision of Data for Network Technical Study - Embedded Generation Installations over 5MW	602	670

4 Expected price trends

Table 4.1 sets out Evoenergy's approved charges for 2019/20 and indicative NUOS charges (excluding metering) for the future regulatory years of the 2019–24 regulatory control period.

Table 4.1 Indicative NUOS charges (excluding metering) for future regulatory years: actual 2019/20 and indicative 2020/21–2023/24 (nominal)

Tariff	Unit	2019/20	2020/21	2021/22	2022/23	2023/24
010 Residential Basic Network						
Network access charge	c/ day	27.11	27.93	28.78	29.65	30.55
Energy consumption	c/kWh	7.89	7.90	7.50	7.40	7.24
015 Residential TOU Network						
Network access charge	c/day	27.11	27.93	28.78	29.65	30.55
Energy consumption at max times	c/kWh	14.13	14.12	13.38	13.19	12.87
Energy consumption at mid times	c/kWh	6.44	6.43	6.09	6.00	5.85
Energy consumption at economy times	c/kWh	3.15	3.15	2.99	2.94	2.87
020 Residential 5000 Network						
Network access charge	c/day	48.99	50.48	52.01	53.59	55.22
Energy consumption for the first 60 kWh per day	c/kWh	6.54	6.52	6.13	6.02	5.84
Energy consumption above 60 kWh per day	c/kWh	7.90	7.90	7.50	7.40	7.24
025 Residential Demand Network						
Network access charge	c/day	27.10	27.93	28.78	29.65	30.55
Energy consumption	c/kWh	3.16	3.14	2.96	2.90	2.82
Peak period maximum demand	c/kW	15.29	15.25	14.38	14.13	13.73
030 Residential with Heat Pump Network						
Network access charge	c/day	93.06	95.89	98.80	101.81	104.90
Energy consumption for the first 165 kWh per day	c/kWh	5.00	4.96	4.62	4.50	4.33
Energy consumption above 165 kWh per day	c/kWh	7.89	7.90	7.50	7.40	7.24
040 General Network						
Network access charge	c/day	49.57	51.08	52.63	54.23	55.88
Energy consumption for the first 330 kWh per day	c/kWh	12.04	12.05	11.46	11.31	11.07
Energy consumption above 330 kWh per day	c/kWh	15.64	15.65	14.88	14.69	14.37
135 Small Unmetered Loads Network						
Network access charge	c/day	40.31	41.53	42.79	44.10	45.44
Energy consumption	c/kWh	12.25	12.28	11.76	11.66	11.46
060 Off-Peak (1) Night Network						
Energy consumption	c/kWh	2.17	2.17	2.08	2.06	2.02
070 Off-Peak (3) Day & Night Network						
Energy consumption	c/kWh	3.34	3.34	3.19	3.16	3.10
080 Streetlighting Network						
Network access charge	c/day	49.87	51.39	52.95	54.56	56.22
Energy consumption	c/kWh	8.36	8.39	8.06	8.00	7.89

Tariff	Unit	2019/20	2020/21	2021/22	2022/23	2023/24
090 General TOU Network						
Network access charge	c/day	49.57	51.08	52.63	54.23	55.88
Energy consumption at business times	c/kWh	18.98	19.03	18.22	18.05	17.73
Energy consumption at evening times	c/kWh	8.60	8.62	8.24	8.16	8.02
Energy consumption at off-peak times	c/kWh	3.89	3.90	3.73	3.69	3.63
101 LV TOU kVA Demand Network						
Network access charge per connection point	c/day	55.70	57.39	59.13	60.93	62.78
Maximum demand charge	c/KVA/day	45.05	45.22	43.40	43.06	42.40
Energy consumption at business times	c/kWh	7.16	7.19	6.90	6.84	6.74
Energy consumption at evening times	c/kWh	3.95	3.97	3.81	3.78	3.72
Energy consumption at off-peak times	c/kWh	2.15	2.16	2.07	2.06	2.03
103 LV TOU Capacity Network						
Network access charge per connection point	c/day	55.70	57.39	59.13	60.93	62.78
Maximum demand charge	c/KVA/day	20.84	20.94	20.14	20.01	19.72
Capacity charge	c/KVA/day	20.84	20.94	20.14	20.01	19.72
Energy consumption at business times	c/kWh	7.16	7.19	6.89	6.84	6.74
Energy consumption at evening times	c/kWh	3.95	3.97	3.81	3.78	3.72
Energy consumption at off-peak times	c/kWh	2.15	2.16	2.07	2.06	2.03
106 LV Demand Network						
Network access charge	c/day	49.57	51.08	52.63	54.23	55.88
Energy consumption	c/kWh	4.68	4.69	4.49	4.45	4.38
Peak period maximum demand	c/kW/day	44.78	44.93	43.09	42.71	42.01
111 HV TOU Demand Network						
Network access charge per connection point	\$/day	20.36	20.98	21.61	22.27	22.95
Maximum demand charge	c/KVA/day	15.49	15.54	14.87	14.74	14.50
Capacity charge	c/KVA/day	15.49	15.54	14.87	14.74	14.50
