Network Tariff Components:

- Standing Charge:
Is the fixed charge measured in cents per billing period day.
- Summer Demand Incentive Charge:
The demand measures the power (kW or KVA at maximum kW) per ½ hr period. The Summer Demand Incentive Charge (SDIC) is based on the highest power delivered between 3pm and 6pm local time Weekdays excluding public holidays in Summer. Summer is defined as 1 November to 31 March. The SDIC is measured in cents per kW or KVA per billing period day and the charge is in addition to the Rolling Peak Demand Charge. For “HOT” demand tariffs, SDIC only applies to days where Melbourne’s maximum temperature is forecast to be equal to or more than 30 deg C .
- Rolling Peak Demand Charge:
The demand measures the power (kVA at maximum kW) per ½ hour period. The Rolling Peak Demand Charge is based on the highest power delivered during Peak periods (defined as 7am to 7pm local time weekdays excluding public holidays) over 12 months to the end of the billing period. Where an existing Supply Contract exists, the minimum rolling peak demand charge is set within the Supply Contract. The Rolling Peak Demand is measured in cents per KVA per day.
- Summer Peak Energy Charge:
Transport cost of energy (rate measured in cents per kWh) consumed during peak time periods in Summer (1 November to 31 March).
 - For Demand tariffs Peak is defined as 7am to 7pm local time weekdays excluding public holidays in Summer.
 - For other tariffs the peak period during Summer is anytime for all single rate tariffs and as applicable for the multi-rate tariffs (eg: 7am to 11pm EST for 7 day tariffs and 7am to 11pm EST weekdays for 5 day tariffs).
- Non-Summer Peak Energy Charge:
Transport cost of energy (rate measured in cents per kWh) consumed during peak time periods in non-Summer (1 April to 31 October).
 - For Demand Tariffs Peak is defined as 7am to 7pm local time weekdays excluding public holidays in non-Summer
 - For other tariffs the peak period during non-Summer is anytime for all single rate tariffs and as applicable for the multi-rate tariffs (eg: 7am to 11pm EST for 7 day tariffs and 7am to 11pm EST weekdays for 5 day tariffs).
- Off-Peak Energy:
Transport cost of energy (rate measured in cents per kWh) consumed during off-peak time periods.
 - For Demand Tariffs the off-peak period is 7pm to 7am local time weekdays and all day weekends and public holidays.
 - For other tariffs the Off Peak period is as applicable for multi-rate tariffs (eg: 11pm to 7am EST for 7 day and dedicated tariffs and 11pm to 7am EST weekdays and all day weekends for 5 day tariffs).
