Network Price List Version 3 Mar 11

FOR PUBLIC RELEASE

UNCONTROLLED COPY IF PRINTED

Network Price List and Explanatory Notes

Explanatory Notes

1 APPLICABILITY OF NETWORK CHARGES

Rates are inclusive of charges levied on Essential Energy by transmission network service providers and government legislation. Essential Energy is required to contribute towards the Climate Change Fund which is used to support energy saving initiatives across New South Wales.

1.1 GOODS AND SERVICES TAX

The network use of system prices and other fees and charges are **exclusive** of the 10% Goods and Services Tax. GST of 10% is added to all Network use of system prices and other fees and charges. The NSW Solar Bonus Scheme Rebate is GST inclusive where applicable.

1.2 CHOICE OF NETWORK CHARGES

The rates listed are the rates charged to retailers of electricity for the use of Essential Energy's distribution system. Network charges do not include the cost of energy. It is a matter for the Retailer of Choice to determine the most economical available Network Tariff. Transfers between Tariffs will apply from the beginning of the normal billing period following the month in which written advice is received and will not be made retrospectively.

Retailers of choice/customers who choose to transfer off an obsolete tariff will lose all rights to all obsolete tariffs on that premise, i.e. the entire site will be required to move onto currently available tariffs. Exemptions to this rule are connection of additional services, e.g. if a site that currently has an obsolete General Supply Business tariff on a premise and they have Controlled Load installed (i.e. new circuit, meter and relay); the Controlled Load One will be connected to the current Controlled Load One tariff while the obsolete General Supply tariff will remain.

Essential Energy reserves the right to review a customer's network price in the event of load changes and notify the customer's retailer of any resulting changes. The final decision on the appropriate network price for a customer shall be at the discretion of Essential Energy.

All customers entering the contestable electricity market will normally be transferred to the appropriate network price reflecting the customer's previous regulated retail tariff.

Refer to AER NSW Distribution Determination 2009-10 to 2013-14 Appendices A and J for rules concerning assigning customers to tariff classes:
<http://www.aer.gov.au/content/index.phtml?itemId=728076> Document – Essential Energy distribution determination.

1.3 MID-MONTH CHANGE OF RETAILER OF CHOICE

Where customers change their Retailer of Choice at any time during a calendar month, NUOS invoices will be allocated between the Retailers from the actual change date that the transfer went 'Complete' in the market. NUOS invoicing will utilise the 'Actual Reads' acquired on that date.

Where the NMI is for Unmetered Supply (UMS) only and changes Retailer of Choice mid-month, NUOS invoices will be allocated on a pro-rata basis depending on the number of days of the month that the customer was contracted with each Retailer. However, it is preferred and advised that UMS is best to transfer as at the 1st day of any calendar month.

1.4 CONTROLLED LOAD

All controlled load equipment for customers who have hot water, process heating or any other approved circuits which are controlled by Essential Energy shall remain a Network asset belonging solely to Essential Energy and as such cannot be removed without permission. Multiple load types (maximum of 3) are permissible on the one relay, with no restrictions on the type of load which may be controlled by a controlled load relay. **Please note:** Controlled Load does not include public holidays.

Network Price List and Explanatory Notes

NB: Where premises are converted to a TOU Tariff, Essential Energy Load Control Devices shall be left to control previously controlled consumer load. An application for additional load must be made by the consumer if previously controlled load is no longer controlled.

Controlled Load One applies where permanently connected appliances are controlled by Essential Energy's equipment so that supply is generally available for 5 to 9 hours overnight on weekdays and extra hours on weekends except where the load is controlled by a time clock. Controlled Load Two applies where permanently connected appliances are controlled by Essential Energy's equipment so that electricity is available for 10 to 18 hours per day on weekdays and extra hours on weekends except where the load is controlled by a time clock. Essential Energy reserves the right to vary these times to suit network conditions without affecting the customer's usage of the appliances. Inslab heating is to be metered and controlled separately to other controlled loads.

All hot water boost facilities are permitted but boost must be metered at primary tariff. This includes Big Blue hot water systems. Boost buttons supplied by Essential Energy are **only available on twin element meters**. There will be an additional charge to activate the boost button. **Please note:** This cost does not include the installation cost provided by an ASP.

1.5 STANDBY SUPPLY

Where customers such as embedded generators require standby supply, the network charges applicable will be negotiated on the basis of the assets involved and the frequency and duration of use of standby supply.

1.6 SUPPLY TO LOW LOAD FACTOR CUSTOMERS

Where a customer's annual load factor (average load divided by maximum load) at a point of supply is less than 15%, the chargeable demand will be based on an assessment of the capacity provided.

1.7 SITE SPECIFIC PRICES (COST REFLECTIVE NETWORK PRICES)

A location specific network price may be negotiated with a customer with an electrical demand of greater than 10MW or a load greater than 40GWh per annum. National Electricity Rules clause 6.23 allows customers to make a request of the DNSP to disclose transmission and distribution charges. Please contact Essential Energy for site specific rates.

1.8 SUBTRACTION METERING

Subtraction Metering is not permissible for new connections. The removal of subtraction metering for existing customers should be encouraged where ever possible when an existing site is upgraded.

TOU Tariffs are not available to premises with subtractive metering.

1.9 PREMISE AMALGAMATION

Premises fed from different substations must have different National Market Identifiers.

1.10 MISCELLANEOUS SERVICES, MONOPOLY SERVICES AND RECOVERABLE WORKS

Miscellaneous services, monopoly services and emergency recoverable works are as set out in Appendices G and H of AER's NSW Distribution Determination 2009-10 to 2013-14. Essential Energy's Price Schedule for these services can be found on Essential Energy's website at: <http://www.essentialenergy.com.au/networkpricing>

Document: Fees for Miscellaneous and Monopoly Services and Emergency Recoverable Works

2 DEFINITIONS

AVOIDED TUOS (TRANSMISSION USE OF SYSTEM).

TUOS charges are calculated and levied by transmission service providers to Essential Energy. The connection of an embedded generator by a customer to the distribution network reduces the amount of TUOS that Essential Energy has to pay a transmission service provider. Essential Energy passes through to the customer the full amount of

Network Price List and Explanatory Notes

these avoided TUOS payments whose connection leads to the reduction in TUOS payable.

BUSINESS PREMISES are generally factories, warehouses, hotels, motels, shops, offices, schools, sporting and social clubs.

CAPACITY CHARGES are charged monthly (\$/KVA) whereby the charges are applied to the maximum half hourly KVA power reading that occurred at a customer's connection point over the 12 months prior to a bill being calculated. Demand is rounded up to 20, 40, 60, 80, 100, 150, 200, 300, 400, 500kVA and so on in 100kVA increments.

DISTRIBUTION LOSS FACTORS this factor is used by the retailer in the market settlement process to add to the energy consumed by the customer, an amount equivalent to the average energy losses for the applicable network price category. Loss factors are not to be applied to network charges and are available on AEMO's website at:
<http://www.aemo.com.au/electricityops/0171-0004.html>

LV DEMAND REBATE for customers on BLND3AO or BLND3TO LV demand tariffs, and whose network charges exceed an average of 20 cents per kilowatt hour (kWh), are rebated for the difference between actual costs and the 20 cents per kWh cap. Calculated on a month by month basis and paid one month in arrears, the rebate is applied if the rebate exceeds 5 per cent, or \$50, of total network charges per account per month. The rebate is also capped

at 40 per cent of total network charges per account per month. Customers must have a power factor of at least 0.9, as required under the NSW Service and Installation Rules to be eligible. All rebate tests are calculated excluding GST.

MAXIMUM DEMAND (KVA) FAR WEST REGION is the highest 30 minute block calculation per monthly settlement period of the vector sum of kW and kVAr, or, if unavailable, by the highest 30 minute block kVA information. 30 minute blocks are timed per hour and half hour on the meter clock.

MONTHLY LOAD FACTOR is the ratio of consumption in kilowatt hours divided by the product of the maximum load in kilowatts and the number of hours during the billing period, generally monthly. If the period is other than monthly, the data will be prorated on a monthly basis.

NATIONAL METERING IDENTIFIER Essential Energy will issue National Metering Identifiers (NMI) for each site in accordance with Section 7 of AEMO's "NMI Procedure" document ME_GN059v005.

NETWORK ACCESS CHARGE this is a fixed charge applied to each point of connection at which energy or demand is measured reflecting the fixed nature of network operational and asset related costs. A separate Network Access Charge will apply to each National Market Identifier (NMI) as defined in the AEMO "NMI Procedure" document ME_GN059v005 for the configuration of metering at a given site. The

Network Access Charge is given as a daily rate in order to facilitate customer transfers.

NIGHT VISION "Night Vision" floodlighting is a service provided by Essential Energy. "Night Vision" lighting is attached to existing Essential Energy poles and is used to improve security and promote business at the same time. "Night Vision" lighting is operated between the hours of dusk and dawn each day. For Night Vision prices please contact our Customer Service Centre, telephone 13 23 56

NON TOU NETWORK USAGE RATES the Non Time of Use charge (c/kWh) is applied to the total energy determined from an energy only meter.

OBSOLETE TARIFFS the word "obsolete" means that no new customers can be connected to this tariff.

Here are some examples of what can and can't be done:

- 1 If a site is newly connected to the Essential Energy network (Greenfield site) it cannot use an obsolete tariff.
- 2 If a site changes ownership i.e. if Jackson P/L moves out and Matthews P/L moves into a site that was on an obsolete tariff, then the new customer Mathews P/L cannot be connected on the obsolete tariff.
- 3 If a customer who is on an obsolete tariff chooses to move to a non obsolete tariff (i.e. because they think it is more cost effective) then the obsolete tariff is no

Network Price List and Explanatory Notes

longer available to them. They cannot transfer back at a later date.

- 4 If a customer who is on an obsolete tariff decides to enter the contestable market, whether the customer chooses to stay with Essential Energy or another Retailer of Choice, then that customer / NMI will no longer be entitled to any obsolete tariff upon return to Essential Energy as a regulated customer.
- 5 A site that is connected to one obsolete tariff cannot transfer to another obsolete tariff. The only tariffs available to any site is:
 - a the tariff the site is already on (except where its usage changes so that the site no longer meets the application criteria for the existing tariff), or
 - b any non obsolete tariff that the site has available to it based on the application criteria of the tariff and limitations of the installed metering.
- 6 Customers who have sites on obsolete tariffs can move off an obsolete tariff at any time. This can be done via a request from the Retailer of Choice to Essential Energy Network Billing group. Please note all requests for tariff changes will be considered, and if approved will apply from the beginning of the normal billing period following the month in which written advice is received and will not be made retrospectively.

Please note that the word obsolete may have a different meaning when applied to Retail tariffs.

OPTIONAL REMOTE METERING is available to small customers at a daily rate of \$1.0751 (excluding GST) who wish to pay for a remotely read meter to avoid the need for Essential Energy employees to enter their premises.

PEAK PERIOD is from 7.00am–9.00am and 5.00pm–8.00pm on weekdays.

SHOULDER PERIOD is from 9.00am–5.00pm and 8.00pm–10.00pm on weekdays.

OFF-PEAK PERIOD is at all other times.

All times are Eastern Standard Time or Summer Time as defined in these Explanatory Notes.

PUBLIC HOLIDAYS when a public holiday falls on a weekday; peak, shoulder and off-peak rates still apply as per the periods stated above.

RESIDENTIAL PREMISES are private dwellings such as house, flat, home unit, town house or similar and include residential sections of boarding houses, places of worship, nursing homes, hospitals and education institutions, and approved caravan parks, whose consumption does not exceed 160 MWh.

SINGLE RATE DEMAND the Demand Charge is based on the highest measured half-hour kVA demand during the month. A separate demand will apply at each individual connection point as defined by AEMO's "NMI Procedure" document ME_GN059v005. Coincident or summated demand from multiple connection points is not permitted without the written approval of Essential Energy.

SITE SPECIFIC DISTRIBUTION LOSS

FACTORS The NER clause 3.6.3 states a connection point for an end user with an electrical demand of >10 MW OR a load of >40 GWh per annum shall have a site specific DLF.

SOLAR BONUS SCHEME (SBS) The NSW Government's SBS commenced on 1 January 2010. Customers who submitted an application on or before 18 November 2010, purchased a system on or before 27 October 2010 and with gross metering arrangements are paid a feed-in tariff of 60 cents per kilowatt hour for all energy generated and fed back into the grid. Customers with net metering arrangements receive 60 cents per kilowatt hour for all excess renewable energy that is fed into the electricity grid after household or small business needs are met.

Customers who joined the scheme after 18th November 2010 or purchased a system after 27th October 2010, and with gross metering arrangements are paid a feed-in tariff of 20 cents per kilowatt hour for all energy generated and fed back into the grid. Customers with net metering arrangements receive 20 cents per kilowatt hour for all excess renewable energy that is fed into the electricity grid after household or small business needs are met.

Eligible to customers who consume less than 160 MWh per annum who have connected an eligible solar photovoltaic (PV) system or wind turbine, up to 10 kilowatts (kW) in capacity.

Network Price List and Explanatory Notes

Gross and net metered customers will continue to be charged their existing rate for energy consumption.

The NSW Solar Bonus Scheme Rebate is GST inclusive, where applicable. Customers should seek independent tax advice as there may be tax implications associated with the supply of electricity to Essential Energy.

Refer to the NSW Industry and Investment website for questions and answers on the SBS.
<http://www.industry.nsw.gov.au/energy/sustainable/renewable/solar/solar-scheme/fag>

SUMMER TIME is the period from the last Sunday in October at 2am to the last Sunday in March at 3am of the following year. Summer time adjustments will be made to Time of Use meters.

SUPPLY VOLTAGES Essential Energy reserves the right to determine the voltage at which supply shall be made available to any particular Customer. The general voltage levels referred to in the prices are:

Low Voltage (LV) nominally 230/400V
High Voltage (HV) nominally 11, 22, 33 or 66kV

Subtransmission (ST) the voltage defined by Essential Energy which interconnects subtransmission or zone substations.

THREE RATE DEMAND the Demand charge (\$/kVA/month) is applied to the calendar monthly kVA demand measured by the meter for the peak, shoulder and off-peak periods.

The monthly kVA demand is the maximum half hour demand for the month occurring within the peak, shoulder and off-peak periods and is calculated using the kWh and kVAh energy components recorded by the National Electricity Rules compliant meter. The method of demand measurement is 30 minute clocked. LV TOU Average Daily Demand and HV TOU Average Daily Demand tariffs are exceptions to this description. Demand charges for these tariffs are calculated as set out in the tariff description.

A separate demand will apply at each individual connection point as defined by AEMO's "NMI Procedure" document ME_GN059v005. Coincident or summated demand from multiple connection points is not permitted without the written approval of Essential Energy. Approval will not be given where connection points are supplied from different substations.

TIME OF USE (TOU) RATES with a time of use meter installed, the energy is charged according to peak, shoulder and off-peak time periods. **Please note:** When a public holiday falls on a weekday; peak, shoulder and off-peak rates apply as per the periods defined above. All times are Eastern Standard Time or Summer Time as defined in these Explanatory Notes.

TIME OF USE (TOU) FAR WEST REGION calculations are based on either Eastern Standard Time or Summer Time depending on when the meter was installed or programmed.

TRANSMISSION LOSS FACTORS for NSW connected customers vary depending on the

customers Transmission Node Identifier (TNI). Loss factors are not to be applied to network charges and for Essential Energy transmission nodes are available on AEMO's website at <http://www.aemo.com.au/electricityops/0172-0001.html>

UNMETERED SUPPLIES (type 7 metering installation) applies to those loads agreed between a Minister and AEMO. Refer to: Metrology Procedures & Type 7 Load Tables – <http://www.aemo.com.au/electricityops/640-0106.html>
NER Chapter 7 - <http://www.aemc.gov.au/Electricity/National-Electricity-Rules/Current-Rules.html>
