

Notes accompanying 2005/ 2006 Tariffs

† - Approximate annual consumption of 4,000 kWh.

- Approximate annual consumption of 8,000 kWh.

^ - Approximate annual peak consumption of 20,000 kWh.

Notes:

1. Distribution tariffs are determined on a GST exclusive basis. GST is added to the distribution tariffs.
2. ETSA Utilities must assign each Distribution Network User to a distribution tariff in respect of each of its connection points in accordance with the following principles.
 - (a) A Distribution Network User that has an agreed maximum demand of 250kVA or more in respect of a connection point, must be assigned to a distribution tariff that includes a demand component in respect of that connection point.
 - (b) A Sub-Transmission (kVA) Network User is a Distribution Network User taking supply at 66kV, or at 33kV outside of the Adelaide Metropolitan area. A minimum annual demand of 10 MVA applies. A NEM compliant type 1-4 interval meter is required. Customers electing to switch to this tariff from 1 July 2002 must meet or exceed the minimum power factor requirements for their customer installation as set out in Part B of the Distribution Code (generally 0.90 pf). These tariffs are invoiced monthly.
 - (c) A Zone Substation (kVA) customer is a Distribution Network User taking supply generally at 11kV from the low voltage transformer terminals. Supply may also be taken at lower voltages that exceed 1kV. A minimum annual demand of 5 MVA and a minimum annual usage of 25GWh apply. A NEM compliant type 1-4 interval meter is required. Customers electing to switch to this tariff from 1 July 2002 must meet or exceed the minimum power factor requirements for their customer installation as set out in Part B of the Distribution Code (generally 0.90 pf). These tariffs are invoiced monthly.
 - (d) A High Voltage Demand (kVA) customer is a Distribution Network User taking supply generally at 11kV. Supply may also be taken at lower voltages that exceed 1kV or at 33kV in metropolitan Adelaide. A minimum annual demand of 1 MVA applies. A NEM compliant type 1-4 interval meter is required. Customers electing to switch to this tariff from 1 July 2002 must meet or exceed the minimum power factor requirements for their customer installation as set out in Part B of the Distribution Code (generally 0.85 pf). These tariffs are invoiced monthly.
 - (e) A High Voltage (kVA) (Obsolete) customer is a Distribution Network User taking supply generally at 11kV. This tariff is available only to Distribution Network Users that were taking supply under the High Voltage Demand (kW) (Obsolete) tariff as at 11 October 1999. Supply may also be taken at lower voltages that exceed 1kV or at 33kV in metropolitan Adelaide. A minimum annual demand of 300kVA applies. A NEM compliant type 1-4 interval meter is required. Customers electing to switch to this tariff from 1 July 2002 must meet or exceed the minimum power factor requirements for their customer installation as set out in Part B of the Distribution Code (generally 0.85 pf). These tariffs are invoiced monthly.
 - (f) A Large Low Voltage Demand (kVA) customer is a Distribution Network User generally taking supply at less than 1kV and generally from the low voltage distribution transformer terminals. A minimum agreed maximum demand of 1MVA applies. A NEM compliant type 1-4 interval meter is required. Customers electing to switch to this tariff from 1 July 2002 must meet or exceed the minimum power factor requirements for their customer installation as set out in Part B of the Distribution Code (generally 0.85 pf). These tariffs are invoiced monthly.
 - (g) A Low Voltage Demand (kVA) customer is a Distribution Network User generally taking supply at less than 1kV and generally from the low voltage distribution transformer terminals. A minimum agreed maximum demand of 250kVA applies. A NEM compliant type 1-4 interval meter is required. Customers electing to switch to this tariff from 1 July 2002 must meet or exceed the minimum power factor requirements for their customer installation as set out in Part B of the Distribution Code (generally 0.85 pf). These tariffs are invoiced monthly.
 - (h) A Medium Low Voltage Demand (kVA) customer is a Distribution Network User generally taking supply at less than 1kV and using demand, peak and off-peak network charges. A minimum agreed maximum demand of 100kVA applies. A NEM compliant type 1-4 interval meter is required. Customers electing to switch to this tariff from 1 July 2002 must meet or exceed the minimum power factor requirements for their customer installation as set out in Part B of the Distribution Code (generally 0.85 pf). These tariffs are invoiced monthly.

- (i) A Low Voltage Business 2 rate – Type 1-4 Meter customer is a Distribution Network User that is not a residential customer taking supply at less than 1kV and using peak and off-peak network charges. The User utilises a type 1-4 meter. Peak consumption is charged at two rates, one rate for consumption up to and including 1,666.7 kWh/mth[^] and another rate for the balance of peak consumption. Off Peak consumption is charged at a flat rate. An excluded service charge applies where ETSA Utilities is required to read the type 1-4 meter (eg for tier one customers and for tier two customers < 160MWh pa). This tariff is invoiced monthly.
- (j) A Low Voltage Business 2 rate – Type 5-6 Meter Read Monthly customer is a Distribution Network User that is not a residential customer taking supply at less than 1kV and using peak and off-peak network charges. Peak consumption is charged at two rates, one rate for consumption up to and including 1,666.7 kWh/mth[^] and another rate for the balance of peak consumption. Off Peak consumption is charged at a flat rate. The User utilises a type 5-6 meter and requires ETSA Utilities to read the meter monthly for which an excluded service charge applies. This tariff is invoiced monthly.
- (k) A Low Voltage Business 2 rate – Type 5-6 Meter Read Quarterly customer is a Distribution Network User that is not a residential customer taking supply at less than 1kV and using peak and off-peak network charges. Peak consumption is charged at two rates, one rate for consumption up to and including 1,666.7 kWh/mth[^] and another rate for the balance of peak consumption. Off Peak consumption is charged at a flat rate. The User utilises a type 5-6 meter which requires ETSA Utilities to read the meter. This tariff is invoiced quarterly.
- (l) A Low Voltage Business single rate – Type 1-4 Meter customer is a Distribution Network User that is not a residential customer taking supply at less than 1kV and using single rate network charges. The User utilises a type 1-4 meter. An excluded service charge applies where ETSA Utilities is required to read the type 1-4 meter (eg for tier one customers and for tier two customers < 160MWh pa). This tariff is invoiced monthly.
- (m) A Low Voltage Business single rate – Type 5-6 Meter Read Monthly customer is a Distribution Network User that is not a residential customer taking supply at less than 1kV and using single rate network charges. The User utilises a type 5-6 meter and requires ETSA Utilities to read the meter monthly for which an excluded service charge applies. This tariff is invoiced monthly.
- (n) A Low Voltage Business single rate – Type 5-6 Meter Read Quarterly customer is a Distribution Network User that is not a residential customer taking supply at less than 1kV and using single rate metering. The User utilises a type 5-6 meter which requires ETSA Utilities to read the meter. This tariff is invoiced quarterly.
- (o) A Low Voltage Residential single rate – Type 1-4 Meter Read Monthly customer is a Distribution Network User that is a residential customer taking supply at less than 1kV. Consumption is charged at two rates, one rate for consumption up to and including 333.3 kWh/mth[†] and another rate for the balance of consumption. The User utilises a type 1-4 meter. An excluded service charge applies where ETSA Utilities is required to read the type 1-4 meter (eg for tier one customers and for tier two customers < 160MWh pa). This tariff is invoiced monthly.
- (p) A Low Voltage Residential single rate – Type 5-6 Meter Read Monthly customer is a Distribution Network User that is a residential customer taking supply at less than 1kV. Consumption is charged at two rates, one rate for consumption up to and including 333.3 kWh/mth[†] and another rate for the balance of consumption. The User utilises a type 5-6 meter and requires ETSA Utilities to read the meter monthly for which an excluded service charge applies. This tariff is invoiced monthly.
- (q) A Low Voltage Residential single rate – Type 5-6 Meter Read Quarterly customer is a Distribution Network User that is a residential customer taking supply at less than 1kV. Consumption is charged at two rates, one rate for consumption up to and including 333.3 kWh/mth[†] and another rate for the balance of consumption. The User utilises a type 5-6 meter which requires ETSA Utilities to read the meter. This tariff is invoiced quarterly.
- (r) A Low Voltage Controlled Load is used by a Distribution Network User for permanently installed storage water heaters with a rated delivery of not less than 125 litres, storage space heaters and other approved applications involving a time switch and separate metering where the timing has been set in accordance with ETSA Utilities' requirements regarding the timing of loads. Consumption is charged at two rates, one rate for consumption up to and including 666.7 kWh/mth[#] and another rate for the balance of consumption. This tariff is available only to Distribution Network Users that were taking supply under the Controlled Load tariff as at 30 June 2003, or are utilising a business single or residential tariff at the NMI in conjunction with the controlled load. This tariff is invoiced at the same frequency as other tariffs used by the Distribution Network User at that NMI.
- (s) Unmetered Overnight Usage supply is defined as overnight use by a Distribution Network User for public lighting. These tariffs are generally invoiced monthly, unless otherwise agreed by ETSA Utilities.
- (t) Unmetered 24 Hour Usage supply is defined as constant 24 hour per day use by a Distribution Network User, typically public phones, traffic lights and telecommunications installations. These tariffs are generally invoiced monthly, unless otherwise agreed by ETSA Utilities.
- (u) Other Unmetered Supply is defined as unmetered use by Distribution Network Users other than public lighting or continuous use. These tariffs are generally invoiced monthly, unless otherwise agreed by ETSA Utilities.

- (v) A Sub-Transmission Network (kW) User is a Distribution Network User taking supply at 66kV, or at 33kV outside of the Adelaide metropolitan area. A minimum annual demand of 10MW applies. A NEM compliant type 1-4 interval meter is required. This tariff is available only to Distribution Network Users that were taking supply under this tariff as at 30 June 2001. These tariffs are invoiced monthly.
- (w) A Zone Substation (kW) customer is a Distribution Network User taking supply generally at 11kV from the low voltage transformer terminals. Supply may also be taken at lower voltages that exceed 1kV. A minimum annual demand of 5MW and a minimum annual usage of 25GWh apply. A NEM compliant type 1-4 interval meter is required. This tariff is available only to Distribution Network Users that were taking supply under this tariff as at 30 June 2001. These tariffs are invoiced monthly.
- (x) A High Voltage Demand (kW) customer is a Distribution Network User taking supply generally at 11kV. Supply may also be taken at lower voltages that exceed 1kV or at 33kV in metropolitan Adelaide. A minimum annual demand of 1MW applies. A NEM compliant type 1-4 interval meter is required. This tariff is available only to Distribution Network Users that were taking supply under this tariff as at 30 June 2001. These tariffs are invoiced monthly.
- (y) The High Voltage Demand (kW) (Obsolete) tariff is available only to Distribution Network Users that were taking supply under this tariff as at 11 October 1999. Conditions applicable at that date apply. These tariffs are invoiced monthly.
- (z) A Large Low Voltage Demand (kW) customer is a Distribution Network User taking supply at less than 1kV and generally from the low voltage distribution transformer terminals. A minimum annual demand of 1MW applies. A NEM compliant type 1-4 interval meter is required. This tariff is available only to Distribution Network Users that were taking supply under this tariff as at 30 June 2001. These tariffs are invoiced monthly.
- (aa) A Low Voltage Demand (kW) customer is a Distribution Network User taking supply at less than 1kV and generally from the low voltage distribution transformer terminals. A minimum annual demand of 300kW applies. A NEM compliant type 1-4 interval meter is required. This tariff is available only to Distribution Network Users that were taking supply under this tariff as at 30 June 2001. These tariffs are invoiced monthly.
- (bb) A Medium Low Voltage Demand (kW) customer is a Distribution Network User that is not a residential customer taking supply at less than 1kV and using demand, peak and off-peak network charges. A minimum annual demand of 100kW applies. A NEM compliant type 1-4 interval meter is required. This tariff is available only to Distribution Network Users that were taking supply under this tariff as at 30 June 2001. These tariffs are invoiced monthly.

3. The supply and demand charges are levied and billed to Distribution Network Users periodically on a pro-rata basis.

4. Demand charges are determined on the basis of:

- (a) Agreed maximum demand (Annual Demand); and
 - (b) Agreed additional maximum demand (Additional Demand),
- determined in accordance with Schedule 2 of Part B of the 2005-2010 Electricity Distribution Price Determination.

5. Peak energy is energy consumed on business days between the hours of 0700 and 2100 (Central Standard Time). For Distribution Network Users with metering that does not recognise specific days, peak energy is energy consumed on each day between the hours of 0700 and 2100 (Central Standard Time).

6. Off-peak energy is energy consumed other than peak energy.
