Definitions

“A” or **“Amp”** means ampere;

“AARR” means the aggregate annual revenue requirement determined in accordance with Clause 4 of the 2007 Determination;

“ABC” means aerial bundled cable;

“AER” means the Australian Energy Regulator;

“Aurora” means Aurora Energy Pty Ltd (ABN 85 082 464 622);

“charging parameters” of a Network Tariff means the constituent elements of the Network Tariff;

“Consumer Price Index” or **“CPI”** means the Consumer Price Index: Average All Capital Cities published by the Australian Statistician under the Census and Statistics Act 1905 of the Commonwealth;

“distribution connected customer” means a **distribution customer** other than an **electricity retailer**, where **distribution customer** and **electricity retailer** have the same meaning as in the *TEC*;

“distribution network tariff” means the schedule of fees (including the rate or rates) Aurora uses to calculate the amount it charges customers, or a class of customers, to recover its AARR, as amended from time to time;

“DORC” means depreciated optimised replacement cost;

“duration of the Determination” means the period from 1 January 2008 to 30 June 2012.

“ESI Act” means the *Electricity Supply Industry Act 1995*;

“Final Pricing Investigation Report” means the *Investigation of Prices for Electricity Distribution Services and Retail Tariffs on Mainland Tasmania, Final Report and Proposed Maximum Prices* issued in September 2007;

“Guideline” means the *Approval of Network Tariffs in accordance with the 2007 Determination Guideline* issued by the Regulator in November 2007;

“HV” means high voltage;

“kVA” means kilovolt amp;

“kW” means kilowatt;

“kWh” means kilowatt hour;

“LV” means low voltage;

“National Electricity Law” or **“NEL”** has the same meaning as in the *ESI Act*;

“National Electricity Market” or **“NEM”** has the same meaning as in the *ESI Act*;

“National Electricity Rules” or **“NER”** has the same meaning as in the *ESI Act*;

“NEMMCO” has the same meaning as in the *ESI Act*;

“NEM related costs” means those costs incurred by Aurora in providing the declared services related to electricity market reform as approved by the Regulator under Clause 4 of the 2007 Determination;

“Network Tariff” means the schedule of fees (including the rate or rates) Aurora uses to calculate the amount it charges customers, or a class of customers, for network services, and for network services and metering services associated with a Type 5, 6 or 7 installation, as amended from time to time;

“ORC” means optimised replacement cost;

“period 1” means the period commencing 1 January 2008 and ending on 30 June 2008;

“period 2” means the period commencing 1 July 2008 and ending on 30 June 2009;

“period 3” means the period commencing 1 July 2009 and ending on 30 June 2010;

“period 4” means the period commencing 1 July 2010 and ending on 30 June 2011;

“period 5” means the period commencing 1 July 2011 and ending on 30 June 2012;

“Price Control Regulations” mean the *Electricity Supply Industry (Price Control) Regulations 2003*;

“Regulator” has the same meaning as in the *ESI Act*;

“TEC” means the *Tasmanian Electricity Code* (as amended from time to time), published by the Regulator under the *ESI Act*;

“Transend” means Transend Networks Pty Ltd (ABN 57 082 586 892) or its successors;

“transmission charges” means those charges attributable to distribution connected customers imposed by Transend for the provision of transmission services in accordance with the *NER*;

“typical customers” means a set of customers derived using the methodology described in the *Typical Electricity Customers Information Paper* issued by the Office of the Tasmanian Energy Regulator in March 2006;

“2007 Determination” means the *Electricity Supply Industry Pricing Policies Declared Electrical Services Pricing Determination* issued by the Regulator in accordance with the *Price Control Regulations* in October 2007.

1 Introduction

The purpose of this submission is to demonstrate that Aurora Energy has fulfilled the obligations imposed by the 2007 Determination and the Guideline. This includes submitting to the Regulator:

1. an Initial Network Tariff Strategy for period 1, and
2. a Network Tariff Pricing Proposal (the 'Initial Network Tariff Pricing Proposal') for period 1.

The Initial Network Tariff Pricing Proposal is outlined within this submission; it addresses the following requirements of the Guideline:

1. set out the proposed Network Tariffs that are to apply for the relevant period;
2. set out, for each proposed Network Tariff, the terms and conditions and the charging parameters and the elements of service to which each charging parameter relates;
3. detail the bona fide forecast installation numbers and loads and the basis of that forecast for each proposed Network Tariff used in developing the Network Tariff Pricing Proposal;
4. set out, for each proposed Network Tariff, the expected revenue for that Network Tariff for the relevant regulatory period and also for the current regulatory period;
5. detail any proposed amendments, variations or adjustments to the Network Tariff proposed, the justification for the proposed amendments, variations or adjustments and whether these amendments, variations or adjustments are consistent with the Network Tariff Strategy;
6. provide details of adjustment variables, including CPI, pass-through and other adjustments permissible under the 2007 Determination and transmission charges attributable to distribution connected customers for the period and an explanation of how each Network Tariff will be affected by the impact of the adjustment or adjustments;
7. set out the nature of any proposed variation or adjustment to the Network Tariff that could occur during the subsequent periods and the basis on which it could occur;
8. demonstrate compliance with the 2007 Determination, including demonstrating that the expected revenue from the distribution network tariffs does not exceed the AARR for the specified period, these Guidelines and the Network Tariff Strategy;

9. describe the nature and extent of and proposed changes from the previous period and demonstrate that the changes comply with these Guidelines and the 2007 Determination;
10. demonstrate the impact on typical customers; and
11. be accompanied by an internal audit certificate and certified as correct by the Chairman and one other Director of Aurora.

The Initial Network Tariff Strategy for period 1 has been developed in accordance with the 2007 Determination and Guideline. The Initial Network Tariff Strategy for period 1 is contained in a separate paper.

All costs, prices and tariffs contained in this submission are exclusive of GST.

2 Compliance with Guideline

Aurora has developed Network Tariffs in accordance with the requirements set out in Clause 2.3(d) of the Guideline.

2.1 Proposed Network Tariffs

The proposed Network Tariffs for Period 1 are detailed in section 3 of this proposal.

2.2 Proposed Terms and Conditions

The proposed terms and conditions for each Network Tariffs for Period 1 are detailed in Attachment 1 of this proposal.

2.3 Forecast Installation Numbers and Loads

The basis of forecast installation numbers and loads are as provided to the Regulator during the 2007 Pricing Investigation and used in the 2007 Determination.

The forecast installation numbers and loads for each Network Tariff for Period 1 are detailed in section 3 of this proposal.

2.4 Expected Revenue for each Network Tariff

The expected revenue for each Network Tariff for Period 1 is detailed in section 3 of this proposal.

2.5 Proposed Amendments to Network Tariffs

The proposed Network Tariffs for Period 1 have been prepared in accordance with the Initial Network Tariff Strategy. Accordingly, there have been no adjustments to report in this Tariff Proposal. Any changes to Network Tariffs from 2007 to 2008 Period 1 have been tabled in Section 3 –Network Tariff Pricing Proposal and described in Section 5 – Tariff Adjustments.

2.6 Adjustment Variables

Details of any adjustment variables that are to apply to the Network Tariffs for Period 1 are included in section 4 of this proposal. Some rebalancing of tariffs was also required and these are detailed in section 5.

2.7 Proposed Variations of Adjustments in Subsequent Periods

Details of any adjustment variables that are to apply to the Network Tariffs for Periods 2 – 5 are included in section 7 of this proposal.

2.8 Compliance

Details of compliance with the 2007 Determination are contained within this proposal.

Details that revenue from tariffs does not exceed the AARR are contained in section 8 of this proposal.

2.9 Proposed Changes from Previous Periods

Aurora has not changed its overall tariff strategy but has however had to rebalance some tariffs to achieve appropriate retail outcomes. This rebalancing is detailed in section 5.

The price increase arising from the 2007 Determination has required an overall increase in Network Tariffs for Period 1. The price increases proposed for each Network Tariff is shown in section 3 of this proposal. Justification of these price increases is detailed in section 5.

2.10 Impact on Typical Customers

The impact of the proposed Network Tariffs on selected typical customers has been included at attachment 4. As this proposal only covers Period 1 no additional typical customer analysis has been undertaken to show future impacts on typical customers.

2.11 Internal Audit Certificate and Certification

Aurora has not provided an internal audit certificate or certification from the Chairman and one other Director of Aurora with this proposal. Aurora's inability to meet the requirements of clause 2.3(d)(11) is the subject of separate correspondence with the Regulator.

Aurora has obtained the certification of an independent external auditor – IBM Corporation. A copy of the audit certificate dated 14 December 2007 and Addendum dated 2 January 2008 is attached at Attachment 3.

3.14 Specified Demand Customers

For customers selecting tariff N15 the following rules apply:

They are able to agree a 'Specified Demand' for their electrical installation. Once set this value of demand is charged for the next twelve months, if however the specified demand is exceeded the 'excess charge' is applied as the demand charge for the billing period.

Renegotiation of specified demand is limited to one occurrence each twelve months or as otherwise agreed with Aurora. Aurora requires two months notice for a specified demand reset.

If the transmission nodal charge is more than 50% greater than the transmission charge (TUoS) in the High Voltage metered demand (kVA) [N10] tariff the customer is to be transitioned to the transmission nodal charge at no greater than 150% of the N10 TUoS charge.

3.15 Individual Tariff Customers (ITC)

Individually Calculated Customer (ICC) network prices will typically apply to customers with an electrical demand in excess of 2.0 MVA or where a customer's circumstances in a pricing zone identify the average shared network charge to be meaningless or distorted. Individually calculated customer network charges are determined by modelling the connection point requirements as requested by the customer or their agents.

ICC prices are based on actual Transmission Use of System (TUOS) charges for the relevant transmission connection point, plus charges associated with the actual shared distribution network utilised for the electricity supply, plus connection charges based on the actual connection assets utilised. This provides the greatest cost reflectivity for this type of customer and is feasible since the number of such customers is relatively small.

Cost allocation and rates are included in attachment 1.

3.16 Standard Transmission Charges

There are a number of customers that may have a tariff that has been specifically calculated for that customer, or group of customers, including those customers with demand in excess of 2 MVA. As part of this tariff there may be a pass-through of the transmission charge applicable to the terminal substation connecting that customer.

Transmission Charges

Average nodal connection charges have been based upon demand. Transend's schedule of charges for 2007-08 is reproduced in the following table.

Table 29– Transmission Charges 2007/08.

Connection Site	TNI	Common Service Price (\$/MVA/mth)	TUOS General Charges (\$/MVA/mth)	TUOS Usage Price (\$/MVA/mth)	Monthly Exit Charges (\$/MVA/mth)	Total (\$/MVA/mth)

Wesley Vale	TWV2	1,120.779	566.084	1,617.554	1,182.265	4,486.682
Arthurs Lake	TAL2	1,788.510	903.363	1,532.401	2,833.609	7,057.883
Hobart (Virtual)		1,482.056	748.557	1,745.995	1,226.518	5,203.126
Launceston (Virtual)		1,264.421	638.644	1,272.377	845.082	4,020.524

Virtual transmission nodes have been developed for Hobart and Launceston due to the high level of inter-connectability of the transmission connection sites and the regular need to transfer loads within the distribution network.

Hobart (Virtual) is based on the following connection sites: Chapel St, Creek Rd, Lindisfarne, Nth Hobart, Risdon (22kV) and Rokeby. Launceston (Virtual) is based on the Norwood, Trevallyn and Hadspen connection sites.

Table 30– Transmission Charges 2007/08 for customers with specific loss factors.

Customer	TNI	Common Service Price (\$/MVA/mth)	TUOS General Charges (\$/MVA/mth)	TUOS Usage Price (\$/MVA/mth)	Monthly Exit Charges (\$/MVA/mth)	Total (\$/MVA/mth)

Henty		1,769.400	893.711	4,477.083	4,560.278	11,700.472

Prices include Distribution Loss Factor

4 Adjustment Variables

Adjustment variables as allowed and defined in the 2007 Determination have been applied to the setting of the revenue to be recovered through Network tariffs. The adjustment variables included in the 2007 Determination include:

- CPI for the quarter ending 6 months prior to the commencement of the relevant period; and
- CF_y - an adjustment arising from the administration of the 2003 Determination.

For the CPI adjustment factor PIF_y , the relevant indexation is 157.5 for the quarter ending 30 June 2007, and the base index is 154.3.

In determining the MAR for period 1 of the 2007 Determination, the total adjustment arising from 2003 Determination was unknown and therefore was excluded when the Regulator was determining price outcomes.

In accordance with the Determination, Aurora has calculated the value (CF_y) for adjustments for the 2003 determination at \$5.52m, this amount is yet to be approved by the Regulator. This amount is to be added to the allowance under the Determination and increases total allowable revenue to \$95.3m for the period commencing 1 January 2008. This adjustment is however compounded by the length of period 1 being only 6 months. This short period of time effectively means that the adjustment is equivalent to an annual amount of \$11.04m.

Calculation of (CF_y) is included at Table 31.

CF_y components	\$ '000
Variations in Electrical safety Expenditure, ES_y	0
Variation in Capital Expenditure, $FADJ_y$	7,159
Variation in Energy & Demand, K_y	251
Impact of SAIDI Variation, $SAIDI_y$	(916)
Impact of SAIFI Variation, $SAIFI_y$	(247)
Variation in Meter Installations, M_y	(727)
Total	5,520

Table 31– Adjustments to the 2003 Determination CF_y

Aurora Proposal

In a letter to the Regulator dated 6 December, Aurora proposed that the adjustments for the 2003 determination, initially calculated at \$5.43m in allowable revenue for period 1, was moved to period 2 to ensure consistency with the Pricing Investigation outcomes. The Regulator accepted the proposal.

Subsequent to this acceptance, further analysis and modelling by Aurora has determined that an additional \$1.0m in total allowable revenue would be required to achieve the 2007 Determination pricing outcomes. Accordingly,

Aurora proposes to utilise \$1.0m of the CF_y in period 1 and defer the remaining \$4.52m to period 2.

Aurora modelling indicates that the movement of this allowable revenue would continue to see an overall tariff increase of approximately 3% between Period 1 and Period 2, a result that remains consistent with the Pricing Investigation.

Aurora wishes to 'shift' this revenue by the following means:

- setting CF_y for Period 1 to \$1.0m; and
- setting CF_y for Period 2 subject to the final amount as approved by the Regulator (approximately \$4.52m plus adjustment for CPI). A detailed submission will be provided to the Regulator as part of the Period 2 Network Tariff submission.

5 Tariff Adjustments

5.1 Rebalancing

The Network Tariffs derived from the pure cost allocation to customer groups would have given a distorted outcome when applied at a retail tariff level, relative to the Regulator's constraints. To satisfy those constraints, multiple levels of rebalancing between the Network Tariffs have been undertaken, each level addressing specific constraints.

In effect the rebalancing has been:

- a) a rebalance between general business LV tariff and all other tariffs to address the curtilage rebate applied to some retail tariffs;
- b) a rebalance between business and residential tariffs to address the retail price movement constraint; and
- c) a rebalance between energy related business tariffs and demand based tariffs to address adverse price movements in period 1.

5.2 Tariff Changes from 2007

There has been a general increase in all tariffs to accommodate the increase in allowable revenue for distribution services and the increase of 1.78% in transmission (TUoS) charges for the period. This general increase is in the range of 16-17% and has been applied to all tariffs.

All tariffs have also had adjustments made to the daily meter charge to reflect the 2007 Determination outcomes. All meter charges are now expressed solely as a daily charge with the subsequent removal of the energy or demand components that applied in 2007 for some meter charges. These changes have resulted in both increases and decreases to the meter charge component of tariffs.

The change in treatment for some components of the connection assets, (moved from metering to distribution services) has also required an adjustment to both meter charges and DUoS charges.

An increase of 50% has been applied to the daily charge component of all demand tariffs to commence a transition to higher daily charges that are more reflective of other jurisdictions. Daily charges in other jurisdictions range from 54 cents to \$20.16 per day; with an average of around \$4 per day. Aurora will increase the daily charge component of demand tariffs in future periods as it moves toward this average jurisdictional charge.

The increase in demand charges (kW/day or kVA/day) in all demand tariffs has been constrained to approximately 16.5% to better reflect the general price increase.

Specific details of each tariff are discussed below.

5.2.1 General Network - Residential

There has been an overall increase of 22.2% in General Network residential tariffs. This increase generally results from the overall increase in the allowable revenue for distribution services and the pass-through of TUoS increases.

The increase applicable to the daily charge and the first 500kWh of consumption has been constrained to minimise the impact on low consumption users. This constraint has meant that prices for the highest consumption levels have had to increase significantly to ensure the recovery of allowable revenue.

5.2.2 General Network – Business

From 2007 to 2008 there has been an overall increase of 7.63% in General Network Business tariffs. This increase is a result of the increase in allowable revenue for distribution services and the pass-through of TUoS increases. The daily charge component which has increased by 21.8%, has been rebalanced to reflect actual infrastructure costs. The daily charge component is comparable with charges in other jurisdiction that tend to be greater than 40 cents per day.

A rebalancing between residential and business tariffs has resulted in a lesser impact on general business tariff compared to other tariffs.

After consultation with Aurora Retail it was decided that the previously available nursing home Network Tariff would be discontinued and a time of use tariff would be introduced in July 2008 that would be available to these and all other business customers. The removal of this tariff has meant substantive network price increases for this class of customer. These adjustments will however be addressed within the Retail tariff structure.

5.2.3 Controlled Energy

There has been a general increase in the tariff to accommodate the increase in allowable revenue for distribution services and the pass-through of TUoS

increases. From 1 January 2008, a DUoS daily charge has been introduced to reflect appropriate infrastructure usage and common service costs applicable to this range of customers. The daily charge for this tariff remains in the range of other jurisdictions (10 to 16 cents per day).

5.2.4 Uncontrolled Energy

There has been a general increase in the tariff to accommodate the increase in allowable revenue for distribution services and the pass-through of TUoS increases. From 1 January 2008, a DUoS daily charge has been introduced to reflect appropriate infrastructure usage and common service costs applicable to this range of customers. The daily charge for this tariff remains in the range of other jurisdictions (10 to 16 cents per day).

5.2.5 LV PAYG

There was no applicable Network Tariff for Pay as You Go metering in 2007 and this is a new tariff. It is envisaged that this tariff will be replaced by a time of use tariff into the future.

5.2.6 LV Metered Demand (kVA)

There has been an overall increase of 19.5% in LV Metered Demand (kVA) tariff. The increase is attributable to the increase in allowable revenue for distribution services and the pass-through of TUoS increases. An increase of 50% has been applied to the daily charge component to better reflect infrastructure usage. Demand charge increases have been constrained to approximately 16.5%.

5.2.7 LV Metered Demand (kW)

There has been an overall increase of 21.3% in LV Metered Demand (kW) tariff. The increase is attributable to the increase in allowable revenue for distribution services and the pass-through of TUoS increases. An increase of 50% has been applied to the daily charge component. Demand charge increases have been constrained to approximately 16.5%. Energy prices have increased by approximately 5% more than equivalent kVA tariff to provide further incentive for customers to move from this obsolete tariff.

5.2.8 HV Metered Demand (kW)

There has been an overall increase of 22.2% in the HV Metered Demand (kW) tariff to accommodate the increase in allowable revenue for distribution services and the pass-through of TUoS increases. An increase of 50% has been applied to the daily charge component. Demand charge increases have been constrained to approximately 16.5%. Energy prices have increased by approximately 5% more than equivalent kVA tariff to provide further incentive for customers to move from this obsolete tariff.

5.2.9 HV Metered Demand (kVA)

There has been an overall increase of 20.1% in the HV Metered Demand (kVA) tariff to accommodate the increase in allowable revenue for distribution services and the pass-through of TUoS increases. An increase of 50% has been applied to the daily charge component. Demand charge increases have been constrained to approximately 16.5%.

5.2.10 LV Day/Night (Irrigation)

An overall increase of 32.3% has occurred in the LV Day/Night (Irrigation) tariff. The majority of the increase results from the increase in allowable revenue for distribution services and the pass-through of TUoS increases. The daily charge has increased significantly to begin a transition to rates that are more reflective of demand tariffs and the proposed time of use tariffs. The 2007 rates were also considerably under-recovering the allocated cost pool. The daily charge also better reflects the infrastructure costs involved in the provision of this tariff. Price impacts on customers are to be handled within the Retail tariff.

5.2.11 Small LV Unmetered

There has been a general increase in this tariff from 2007 to 2008 to accommodate the increase in allowable revenue for distribution services and the pass-through of TUoS increases.

6 Fixed and variable charges

Generally fixed charges for all tariffs are within the range of fixed charges applied in other NEM jurisdictions. Although the general Network Tariff N01 is in the upper bounds of the range, this is constrained at the retail tariff level.

A detailed comparison of fixed and variable charges applicable to other jurisdictions has been included at Appendix 1.

Two examples of Alinta demand tariffs are given due to different charges applying to different blocks of customers based on their energy use.

Daily/fixed charges vary dramatically within the other Australian jurisdictions. For the energy-based tariffs, with the exception of N01 and N08, Aurora's proposed tariffs are generally midrange to those in other states. For N01 and N08 Aurora is towards the upper end of the range.

For demand based tariffs Aurora's daily charge is much lower than the average charged by other utilities, coupled with this some utilities in effect have an additional fixed charge by having a fixed minimum demand charge.

For energy charges, generally Aurora is near or below the average charge across the other jurisdictions. For N01 Aurora has a three step declining charge, whereas the other utilities generally have a two-step inclining charge. For N06,

Aurora's has a lower energy charge than the average charged by other utilities but this is partly offset by a higher than average daily charge.

Aurora's demand charges are mid range to those charged by other utilities when those with fixed minimum demand charges are excluded (generally those with lower demand charges than the average).

7 Proposed variations in subsequent periods

As a result of the Network Tariff rebalancing to satisfy the constraints at a retail tariff level, an extensive amount of work needs to be undertaken to address the variations and price paths for Network Tariffs in subsequent periods. These proposed adjustments are still under development and will be addressed in the submission on Network Tariff Strategy for periods 2 to 5. Preliminary estimates have been prepared in consultation with Aurora Retail for Period 2. These estimates indicate price outcomes that remain consistent with the 2007 Pricing Determination of approximately 3%.

8 Compliance with the 2007 Determination

Under the 2007 Determination, proposed Network Tariffs are to be set based on the forecast customer numbers (installations and loads) for all customers connected to the distribution network and are to be set to ensure that the forecast revenue does not exceed the maximum allowable revenue.

Calculation of Maximum Allowable Revenue (MAR)

The methodology for calculating the Maximum Annual Revenue (MAR) for Distribution Network Services for the period 1 January 2008 to 30 June 2008 was submitted to the Regulator on 30 November 2007. The submission outlined the methodology and calculations required to determine the MAR as provided for in the 2007 Pricing Determination.

Included in the calculation of MAR for period 1 were:

- the forecast maximum AARR defined in table 1 of the determination;
- CPI for the quarter ending 6 months prior to the commencement of the relevant period (see Section 4 – Adjustment Variables); and
- (CF_y) an adjustment arising from the administration of the 2003 Determination (see Section 4 – Adjustment Variables).

Revenue Reconciliation

The following table sets out the forecast revenue to be recovered through Network tariffs against the maximum allowable revenue.

Revenue Reconciliation	Expected Revenue
Revenue	
Total Revenue from Tariffs N01 to N15	\$128,419,391
Total Revenue from Tariff N20 (streetlight DUoS)	\$823,300
Estimated TUoS pass through to Tariff N15	\$160,800
DUoS Revenue from Individual Tariff Customers	\$534,264
TUoS Revenue from Individual Tariff Customers	\$1,811,367
Total Revenue	\$131,749,122
Less adjustments	
TUoS charge	
Forecast total TUoS charge for period	\$35,020,562
Metering Revenue	
Revenue included in tariffs	\$6,017,991
Total Adjustments	\$41,038,553
Net revenue after revenue adjustments	\$90,710,569
AARR allowance from 2007 Determination Table 1	\$87,929,000
2003 Determination Adjustment	\$1,000,000
CPI adjustment to revenue allowance	\$1,850,000
Total revenue allowance (excluding meters)	\$90,779,000

Table 32– Revenue recovery

In accordance with the 2007 Determination, the proposed Network tariffs recover \$68,431 less than the maximum allowable revenue.

9 Terms and Conditions

Terms and condition for Network tariffs are proposed to be as per the attached Network Tariff Application Guide Period 1 2008.
